You have to change the way your study. Get the best Designing and Implementing Secure Cloud Access for Users and Endpoints 300-740 exam questions for your text, check all the chapters, and carefully take note of the important points. You can even highlight the important ones to get a quick revision whenever you want. Cramming the Designing and Implementing Secure Cloud Access for Users and Endpoints 300-740 books is not a good idea because it will not help you in understanding the concept. You just read the lines, try to remember them, and believe that you can keep those lines in your mind during the Cisco Certification Exams.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	• Network and Cloud Security:This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.

Topic 2	• User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 3	• Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 4	• Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.
Topic 5	• Application and Data Security This section of the exam measures skills of Cloud Security Analysts and explores how to defend applications and data from cyber threats. It introduces the MITRE ATT&CK framework, explains cloud attack patterns, and discusses mitigation strategies. Additionally, it covers web application firewall functions, lateral movement prevention, microsegmentation, and creating policies for secure application connectivity in multicloud environments.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q148-Q153):

NEW QUESTION # 148
Based on telemetry reports, actions might include adjusting _____ to better protect against identified threats.

- A. security policies
- B. hiring practices
- C. office layouts
- D. marketing strategies

Answer: A

NEW QUESTION # 149
Determine cloud platform security policies based on application connectivity requirements might involve:

- A. Implementing network peering
- B. Selecting appropriate cloud service models (IaaS, PaaS, SaaS)
- C. Avoiding the use of security groups and ACLs
- D. Configuring firewalls and access lists

Answer: A,B,D

NEW QUESTION # 150
The primary purpose of Cisco Secure Analytics and Logging is to:

- A. Focus solely on external threat actors while ignoring insider threats
- B. Simplify attacks on network infrastructure
- C. Decrease the storage of logs and analytics data
- D. Enhance visibility into security and network events for better incident analysis

Answer: D

NEW QUESTION # 151
A network administrator uses Cisco Umbrella to protect internal users from malicious content. A customer is using an IPsec tunnel to connect to an Umbrella Organization. The administrator was informed about a zero- day vulnerability that infects user machines and uploads sensitive data through the RDP port. The administrator must ensure that no users are connected to the internet using the RDP protocol. Which Umbrella configuration must the administrator apply?

- A. DNS policy to block Remote Desktop Manager application type
- B. Data loss prevention policy to block all file uploads with RDP application mime type
- C. Firewall policy and set port 3389 to be blocked for all outgoing traffic
- D. Web policy to block Remote Desktop Manager application type

Answer: C

Explanation:
The Remote Desktop Protocol (RDP) uses TCP port 3389. Cisco Umbrella includes a cloud-delivered firewall that can be used to block outbound traffic by port. In this case, since the RDP communication needs to be prevented regardless of application name resolution, the best approach is to use a Firewall policy in Umbrella to block port 3389 traffic across the tunnel.

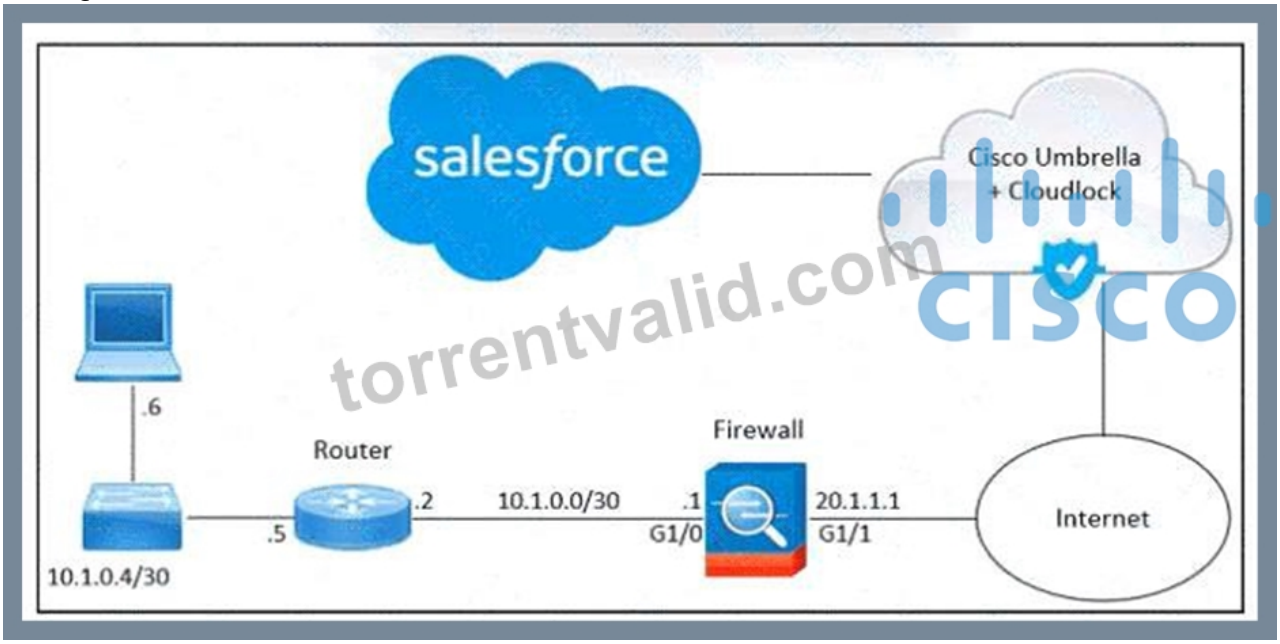
NEW QUESTION # 152



Refer to the exhibit. An engineer must enable access to Salesforce using Cisco Umbrella and Cisco Cloudlock. These actions were performed:
* From Salesforce, add the Cloudlock IP address to the allow list
* From Cloudlock, authorize Salesforce

However, Salesforce access via Cloudlock is still unauthorized. What should be done to meet the requirements?

- A. From the Salesforce admin page, grant API access to Cloudlock.
- B. From the Salesforce admin page, grant network access to Cloudlock
- C. From the Cloudlock dashboard, grant network access to Salesforce.
- D. From the Cloudlock dashboard, grant API access to Salesforce.

Answer: B

Explanation:
When integrating Cisco Cloudlock with SaaS platforms like Salesforce, two core authorizations are required:
network access and API authorization. In the scenario, Cloudlock has been authorized in Salesforce, and its IP has been allow-listed. However, if access is still denied, the most likely cause is that Salesforce has not been configured to accept traffic from Cloudlock's IP range - a process handled from the Salesforce admin panel.
To resolve the issue, network access must be explicitly granted to Cloudlock from within Salesforce. This ensures that Salesforce accepts requests initiated by Cloudlock for monitoring and enforcement.
