- A. R1=WD Link=RW. R2=RW
- B. R1=WD Link=NR R2=RW
- C. R1=RW Link=RW; R2=WD

Answer: B

NEW QUESTION # 82
What is the default size of a Gatekeeper on a PowerMax array1?

- A. 3 KB
- B. 3 cylinder
- C. 6 cylinder
- D. 6 KB

Answer: B

Explanation:
Step by Step Comprehensive Detailed Explanation:
A Gatekeeper in PowerMax is a small, dedicated device used for communication between the storage array and Solutions Enabler (SYMCLI), the command-line management interface. The default size of a Gatekeeper on a PowerMax array is3 cylinders.
While the size can technically be specified in kilobytes (KB), the traditional and preferred unit for Gatekeeper size is cylinders. This is because cylinders represent a specific number of blocks on the physical disks, and using cylinders helps ensure consistent sizing across different disk types and configurations.
Why other options are incorrect:
* A. 3 KB, C. 6 KB:These sizes are too small to be practical for a Gatekeeper.
* D. 6 cylinder:While older VMAX models might have used 6 cylinders, the current default for PowerMax is 3 cylinders.
References and documents of Dell's public documentation for PowerMax Operate v.2:

* Dell Solutions Enabler 10.0.0 CLI User Guide:This guide provides information about Gatekeepers and their role in Solutions Enabler. While it might not explicitly state the default size, it mentions that Gatekeepers are typically small devices. You can find this document on the Dell Support website by searching for "Solutions Enabler CLI User Guide."
* Dell PowerMax Family: Essentials and Best Practices Guide:This guide might offer general information about Solutions Enabler and its configuration, which can provide context for understanding the purpose and sizing of Gatekeepers.
