In this Desktop-based Microsoft AZ-305 practice exam software, you will enjoy the opportunity to self-exam your preparation. The chance to customize the Microsoft AZ-305 practice exams according to the time and types of Microsoft AZ-305 practice test questions will contribute to your ease. This format operates only on Windows-based devices. But what is helpful is that it functions without an active internet connection. It copies the exact pattern and style of the real Microsoft AZ-305 Exam to make your preparation productive and relevant.

To prepare for the Microsoft AZ-305 exam, candidates are encouraged to take advantage of the resources available from Microsoft. This includes training courses, study guides, and practice exams. Microsoft offers a range of training options, including classroom-based training, virtual training, and on-demand courses. Candidates can also take advantage of the Azure free account to gain hands-on experience with the platform and its various services.

How long does it take to pass the Microsoft AZ-305 Exam?

According to the **AZ-305 exam dumps** the passing Score, duration & question for the Microsoft AZ-305 Certification is given below

- Languages: English
- Duration: 60 Minutes

- Passing scores: 70%
- No. of questions: 40-60

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q121-Q126):

NEW QUESTION # 121

What should you implement to meet the identity requirements? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Service:

Azure AD Identity Governance
Azure AD Identity Protection
Azure AD Privilege Access Management (PIM)
Azure Automation

Feature:

Access packages
Access reviews
Approvals
Runbooks

Answer:

Explanation:

Service:

Azure AD Identity Governance
Azure AD Identity Protection
Azure AD Privilege Access Management (PIM)
Azure Automation

Feature:

Access packages
Access reviews
Approvals
Runbooks

NEW QUESTION # 122

You plan to migrate App1 to Azure.

You need to recommend a high-availability solution for App1. The solution must meet the resiliency requirements.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Number of host groups:

Number of virtual machine scale sets:

Microsoft

Answer:

Explanation:

Number of host groups:

Number of virtual machine scale sets:

Microsoft

Explanation:

Graphical user interface, text, application, email Description automatically generated

Number of host groups:

Number of virtual machine scale sets:

Microsoft

Box 1: 3

Scenario: App1 must meet the following requirements:

Be hosted in an Azure region that supports availability zones.

Maintain availability if two availability zones in the local Azure region fail.

A host group is a resource that represents a collection of dedicated hosts. You create a host group in a region and an availability zone, and add hosts to it.

Use Availability Zones for fault isolation

Availability zones are unique physical locations within an Azure region. Each zone is made up of one or more datacenters equipped with independent power, cooling, and networking. A host group is created in a single availability zone. Once created, all hosts will be placed within that zone. To achieve high availability across zones, you need to create multiple host groups (one per zone) and spread your hosts accordingly.

Box 2: 1

Scenario: App1 must meet the following requirements:

Be hosted on Azure virtual machines that support automatic scaling.

An Azure virtual machine scale set can automatically increase or decrease the number of VM instances that run your application.

This automated and elastic behavior reduces the management overhead to monitor and optimize the performance of your application.

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/dedicated-hosts>

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/virtual-machine-scale-sets-autoscale-overview>

NEW QUESTION # 123

You need to design an Azure policy that will implement the following functionality:

- * For new resources, assign tags and values that match the tags and values of the resource group to which the resources are deployed.
- * For existing resources, identify whether the tags and values match the tags and values of the resource group that contains the resources.
- * For any non-compliant resources, trigger auto-generated remediation tasks to create missing tags and values.

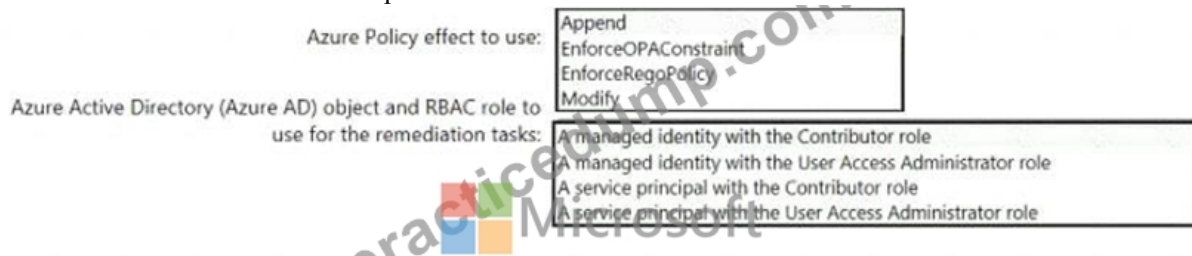

The solution must use the principle of least privilege.

What should you include in the design? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

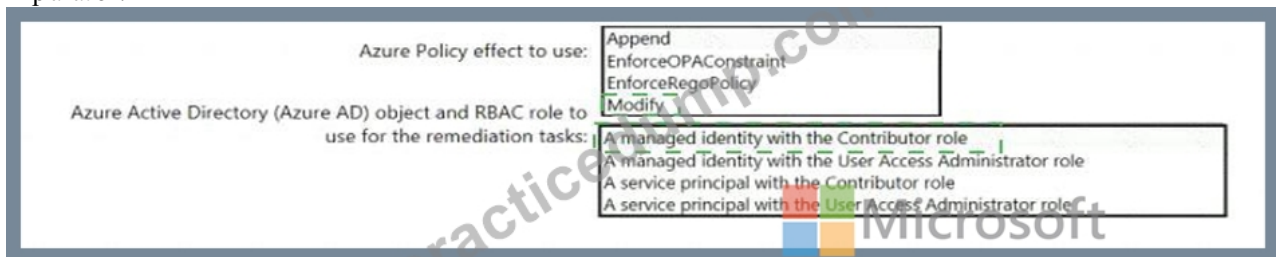

Azure Policy effect to use:

Azure Active Directory (Azure AD) object and RBAC role to use for the remediation tasks:

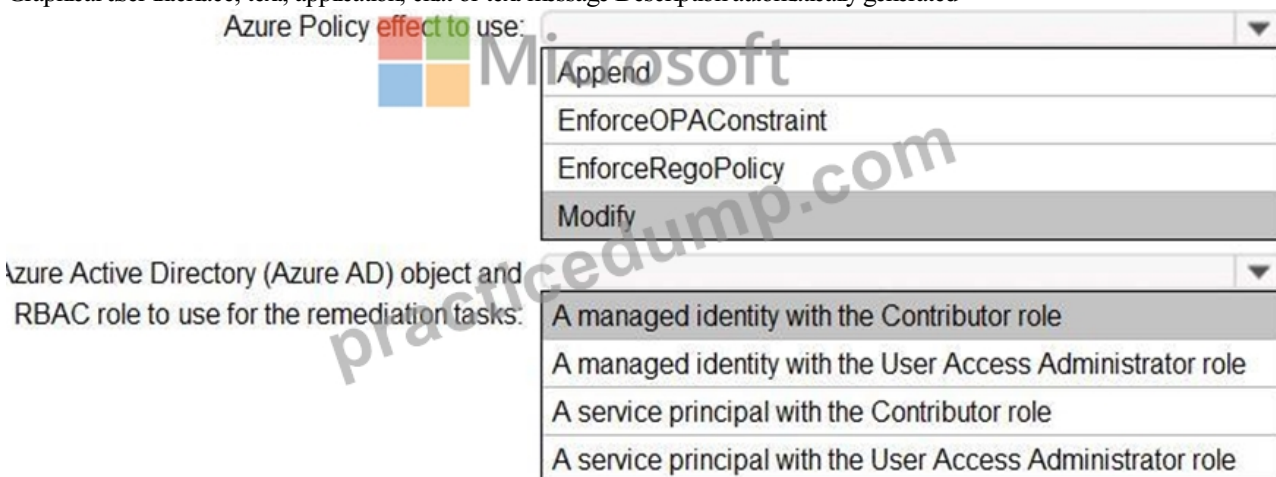

Answer:

Explanation:

Explanation

Graphical user interface, text, application, chat or text message Description automatically generated

Box 1: Modify

Modify is used to add, update, or remove properties or tags on a resource during creation or update. A common example is updating tags on resources such as costCenter. Existing non-compliant resources can be remediated with a remediation task. A single Modify rule can have any number of operations.

Box 2: A managed identity with the Contributor role

* Managed identity

How remediation security works: When Azure Policy runs the template in the deployIfNotExists policy definition, it does so using a managed identity. Azure Policy creates a managed identity for each assignment, but must have details about what roles to grant the managed identity.

* Contributor role

The Contributor role grants the required access to apply tags to any entity.

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/tag-resources>
<https://docs.microsoft.com/en-us/azure/governance/policy/concepts/effects#modify>

NEW QUESTION # 124

You are developing an app that will use Azure Functions to process Azure Event Hubs events. Request processing is estimated to take between five and 20 minutes. You need to recommend a hosting solution that meets the following requirements:

- * Supports estimates of request processing runtimes
- * Supports event-driven autoscaling for the app

Which hosting plan should you recommend?

- A. Dedicated
- **B. Premium**
- C. App Service
- D. Consumption

Answer: B

NEW QUESTION # 125

A company has an on-premises file server cblserver that runs Windows Server 2019. Windows Admin Center manages this server. The company owns an Azure subscription. You need to provide an Azure solution to prevent data loss if the file server fails.

Solution: You decide to create an Azure Recovery Services vault. You then decide to install the Azure Backup agent and then schedule the backup. Would this meet the requirement?

- A. No
- **B. Yes**

Answer: B

NEW QUESTION # 126

.....

The Designing Microsoft Azure Infrastructure Solutions (AZ-305) certification exam is one of the top-rated and career-oriented certificates that are designed to validate an Microsoft professional's skills and knowledge level. These Designing Microsoft Azure Infrastructure Solutions (AZ-305) practice questions have been inspiring those who want to prove their expertise with the industrial-recognized credential. By cracking it you can gain several personal and professional benefits.
