Our online service will give you 24/7 online support. If you have any question about GH-100 exam software or other exam materials, or any problem about how to purchase our products, you can contact our online customer service directly. Besides, during one year after you purchased our GH-100 Exam software, any update of GH-100 exam software will be sent to your mailbox the first time.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 2	• Manage GitHub Packages:This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
Topic 3	• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
Topic 4	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.

Topic 5	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.

GH-100 Answers Real Questions | Real GH-100 Exams

If you feel that you purchase PracticeTorrent Microsoft GH-100 exam training materials, and use it to prepare for the exam is an adventure, then the whole of life is an adventure. Gone the furthest person is who are willing to do it and willing to take risks. Not to mention that PracticeTorrent Microsoft GH-100 exam training materials are many candidates proved in practice. It brings the success of each candidate is also real and effective. Dreams and hopes are important, but more important is to go to practice and prove. The PracticeTorrent Microsoft GH-100 Exam Training materials will be successful, select it, you have no reason unsuccessful !

Microsoft GitHub Administration Sample Questions (Q65-Q70):

NEW QUESTION # 65
What will happen if Dependabot discovers a vulnerable transitive dependency in a repository?

- A. It automatically removes the package from the repository.
- B. It sends an email to the repository owner but does not alter code.
- C. It opens a pull request to update the affected package directly, regardless of version compatibility.
- D. It creates a pull request to update the direct dependency to a version that resolves the vulnerability.

Answer: D

Explanation:
Dependabot will automatically open a pull request that updates the direct dependency to a version which, in turn, resolves (or removes) the vulnerable transitive dependency-ensuring the fix is applied via your declared dependencies.

NEW QUESTION # 66
You are using GitHub-hosted runners and need to securely deploy to an internal system. The security team requires that these runners use IP address ranges that would not be shared with other companies. Which of the following approaches would meet their requirements?

- A. GitHub-hosted standard runners, using the IP addresses provided in "api" from https://api.github.com/meta
- B. GitHub-hosted larger runners with static IP addresses
- C. GitHub-hosted larger runners with Azure private networking
- D. GitHub-hosted standard runners, using the IP addresses provided in "actions" from https://api.github.com/meta

Answer: B

Explanation:
GitHub's larger runners let you reserve dedicated static IP addresses for your workflows - so you can allow-list those IPs in your firewall and be sure they aren't shared with any other tenant.

NEW QUESTION # 67
Which of the following is a benefit of creating a new GitHub organization?

- A. Simplified collaboration across all organizations.
- B. Automatic inheritance of policies from other organizations.
- C. Reduced administrative overhead.
- D. Clear separation of reggs, projects, teams, billing, and organization-specific policies.

Answer: D

Explanation:
Creating a new organization gives you a dedicated container for your shared work, letting you isolate repositories, projects, teams, billing settings, and policy configurations on an organization-by-organization basis.

NEW QUESTION # 68
Which GitHub feature is responsible for tracking dependencies and known vulnerabilities in those dependencies from an advisory database?

- A. Dependency Graph
- B. Security Policy
- C. Repository Insights
- D. CodeQL

Answer: A

Explanation:
The Dependency Graph continuously analyzes your repository's manifest and lock files to build an inventory of direct and transitive dependencies and flags any that match entries in the GitHub Advisory Database, surfacing known vulnerabilities.

NEW QUESTION # 69
A GitHub Enterprise administrator is planning to implement SAML SSO across their company. Which of the following correctly distinguishes enterprise-wide SAML SSO from organization-level SAML SSO?

- A. Enterprise-wide SAML SSO requires less initial administrative overhead than organization-level implementation.
- B. Enterprise-wide SAML SSO allows different organizations to use different authentication methods.
- C. Enterprise-wide SAML SSO immediately removes users who fail to authenticate via the IdP.
- D. Enterprise-wide SAML SSO ensures users authenticate through the same IdP across all organizations.

Answer: D

Explanation:
Enterprise-wide SAML SSO enforces a single IdP across all member organizations-its configuration overrides any per-organization SAML settings, so everyone must authenticate through the same provider.

NEW QUESTION # 70
.....

Therefore, keep checking the updates frequently to avoid any stress regarding the GitHub Administration GH-100 certification exam. All your endeavors can turn to dust if you prepare as per the old content. The facilitating measures by PracticeTorrent do not halt here.
