We sincerely hope that you can choose our Plat-Admn-301 Study Guide, which may change your life and career by just a step with according Plat-Admn-301 certification. For we have helped so many customers achieve their dreams.

Salesforce Certified Platform Administrator II Sample Questions (Q121-Q126):

NEW QUESTION # 121

On the Contact record, if a contact has the value of 'CEO' in the Title field, the administrator wants to require the users to also put a phone number in the Phone field.

What formula should the administrator put in the Error Condition Formula of a validation rule to enable this?

- A. Title <> 'CEO' && NOT(ISBLANK(Phone))
- **B. Title = 'CEO' && ISBLANK(Phone)**
- C. Title <> 'CEO' && ISBLANK(Phone)
- D. Title = 'CEO' && NOT(ISBLANK(Phone))

Answer: B

Explanation:

The error condition formula of a validation rule should return TRUE when the validation rule should fire and display an error message. In this case, the validation rule should fire when the Title field has the value of 'CEO' and the Phone field is blank. The formula Title = 'CEO' && ISBLANK(Phone) returns TRUE when both conditions are met, and FALSE otherwise. References: https://help.salesforce.com/s/articleView?id=sf.fields_useful_field_validation_formulas.htm&type=5

NEW QUESTION # 122

AW Computers has created a custom field called Government ID on a custom object. Most users with a custom Sales profile should be unable to access this field. A select group of Sales users called the Institutional Team should be able to access the Government ID field via reports.

How should an administrator accommodate this request?

- A. Configure a report type with the Government ID field. Assign this report type to the Institutional Team via a permission set.
- B. Make a report with the Government ID field included. Share this report to the Institutional Team in a public reports folder.
- C. Mark the field as Read Only on the sales profile. Create a permission set to re-enable reporting for the Institutional Team.
- **D. Create a permission set with Read access to the field. Assign the permission set to the Institutional Team.**

Answer: D

Explanation:

A permission set is a collection of settings and permissions that give users access to various tools and functions in Salesforce. A permission set can be used to extend users' functional access without changing their profiles. You can assign permission sets to individual users or groups of users based on their business needs. In this case, you can create a permission set with Read access to the Government ID field on the custom object and assign it to the Institutional Team users who need access to this field via reports. References: https://help.salesforce.com/s/articleView?id=sf.perm_sets_overview.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.perm_sets_create.htm&type=5

NEW QUESTION # 123

A user is getting an error when attempting to merge two accounts. The administrator checks the profile to see the user has Read/Write permission on Accounts and is the owner of both records.

What is preventing the user from completing the merge?

- A. Only administrators have permission to merge records.
- B. The user is assigned to the wrong territory.
- **C. The Delete permission is missing on the user for Accounts.**
- D. The Account matching rules are not set.

Answer: C

Explanation:

The Delete permission is missing on the user for Accounts is what is preventing the user from completing the merge. Merging accounts is a way to combine up to three duplicate accounts into one master record and update the related records accordingly. Merging accounts requires the Delete permission on accounts because merging accounts involves deleting the duplicate records and keeping only the master record.

NEW QUESTION # 124

A sales user is assigned to a permission set group that gives them Modify All access to Accounts. An administrator assigns the same user to a muting permission set that mutes Deletes access on Account.

What level of access will the sales user have on the Account object?

- A. Read, Create, and Edit
- B. No Access
- C. Modify All
- D. Read-only

Answer: C

Explanation:

Modify All is the level of access that the sales user will have on the Account object after being assigned to a muting permission set that mutes Delete access on Account. Muting permissions are a way to reduce or remove access to objects or fields for users who are assigned to permission set groups. Muting permissions can only mute object-level permissions, such as Create, Read, Edit, Delete, View All, or Modify All, but not field-level permissions or other permissions. Muting permissions can only reduce or remove access that is granted by other permission sets or permission set groups within the same permission set group, but not by profiles or other sources of access. Therefore, in this case, the muting permission set will only mute the Delete access on Account that is granted by the permission set group, but not the Modify All access that is also granted by the permission set group.

NEW QUESTION # 125

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log In. The administrator would now like to look at how many users have successfully used it since It was rolled out.

What are two ways the administrator can get this Information?

Choose 2 answers

- A. Create a new view In Identity Verification History, specifying Method.
- B. Export Login History and filter based off of Authentication Method Reference,
- C. Run a session setting report, specifying login methods by user.
- D. Open the Login Access Policies In Setup which shows how many users are using MFA.

Answer: A,B

Explanation:

Salesforce Authenticator is an app that adds an extra layer of security for logging into Salesforce by requiring users to verify their identity using their mobile device after entering their username and password on Salesforce login page. To see how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two methods:

* A) Create a new view In Identity Verification History, specifying Method.

Identity Verification History is a tool that shows information about each identity verification event for users in your org, such as the date and time, the verification method used, the IP address, and the status of the verification. By creating a new view in Identity Verification History and specifying the method as Salesforce Authenticator, an administrator can see how many users have used the app to verify their identity when logging in. References: https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5

* D) Export Login History and filter based off of Authentication Method Reference.

Login History is a tool that shows information about each login attempt for users in your org, such as the date and time, the username, the source IP address, the login type, and the status of the login. By exporting Login History as a CSV file and filtering based on the Authentication Method Reference column, an administrator can see how many users have used Salesforce Authenticator as their authentication method when logging in.
