AZ-104 Official Study Guide - New AZ-104 Test Price

Are you still worried about your coming AZ-104 exam and have no idea what to do? Are you too busy to study with all the books and other broad exam materials which will take you a long time to prepare for your exam? You can just choose to buy our AZ-104 Exam Questions which have settle all these problems for you. And our pass rate of the AZ-104 study materials is high as 98% to 100%. Hence they are your real ally for establishing your career pathway and get your potential attested.

Microsoft Azure Administrator Sample Questions (Q162-Q167):

NEW QUESTION # 162

You have an Azure subscription that contains the following resources:

- * a virtual network named VNet1
- * a replication policy named ReplPolicy1
- * a Recovery Services vault named Vault1
- * an Azure Storage account named Storage1

You have an Amazon Web Services (AWS) EC2 virtual machine named VM1 that runs Windows Server. You need to migrate

VM1 to VNet1 by using Azure Site Recovery.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Install Azure Site Recovery Unified Setup

Create an Azure Migrate project.

Enable Windows PowerShell remoting on VM1.

Deploy an EC2 virtual machine as a configuration server.

Enable replication for VM1.

Answer:

Explanation:

Actions	Answer Area
Install Azure Site Recovery Unified Setup.	Deploy an EC2 virtual machine as a configuration server.
Create an Azure Migrate project.	Install Azure Site Recovery Unified Setup.
Enable Windows PowerShell remoting on VM1.	Enable replication for VM1.
Deploy an EC2 virtual machine as a configuration server.	
Enable replication for VM1.	

Explanation:

Step 1: Deploy an EC2 virtual machine as a configuration server

Prepare source include:

Use an EC2 instance that's running Windows Server 2012 R2 to create a configuration server and register it with your recovery vault.

Configure the proxy on the EC2 instance VM you're using as the configuration server so that it can access the service URLs.

Step 2: Install Azure Site Recovery Unified Setup.

Download Microsoft Azure Site Recovery Unified Setup. You can download it to your local machine and then copy it to the VM you're using as the configuration server.

Step 3: Enable replication for VM1.

Enable replication for each VM that you want to migrate. When replication is enabled, Site Recovery automatically installs the Mobility service.

Hotspot Question

You plan to create an Azure Storage account in the Azure region of East US 2.

You need to create a storage account that meets the following requirements:

- Replicates synchronously
- Remains available if a single data center in the region fails.

How should you configure the storage account? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

 Microsoft

Replication:

Geo-redundant storage (GRS)

Locally-redundant storage (LRS)

Read-access geo-redundant storage (RA GRS)

Zone-redundant storage (ZRS)

Account kind:

Blob storage

Storage (general purpose v1)

StorageV2 (general purpose v2)

Answer:

Explanation:

Answer Area

 Microsoft

Replication:

Geo-redundant storage (GRS)

Locally-redundant storage (LRS)

Read-access geo-redundant storage (RA GRS)

Zone-redundant storage (ZRS)

Account kind:

Blob storage

Storage (general purpose v1)

StorageV2 (general purpose v2)

Explanation:

Box 1: Zone-redundant storage (ZRS)

Zone-redundant storage (ZRS) replicates your data synchronously across three storage clusters in a single region.

LRS would not remain available if a data center in the region fails GRS and RA GRS use asynchronous replication.

Box 2: StorageV2 (general purpose V2)

ZRS only support GPv2.

NEW QUESTION # 164

You plan to deploy an Azure container instance by using the following Azure Resource Manager template.

```

{
  "type": "Microsoft.ContainerInstance/containerGroups",
  "apiVersion": "2018-10-01",
  "name": "webprod",
  "location": "westus",
  "properties": {
    "containers": [
      {
        "name": "webprod",
        "properties": {
          "image": "microsoft/iis:nanoserver",
          "ports": [
            {
              "protocol": "TCP",
              "port": 80
            }
          ],
          "environmentVariables": {},
          "resources": {
            "requests": {
              "memoryInGB": 1.5,
              "cpu": 1
            }
          }
        }
      }
    ],
    "restartPolicy": "OnFailure",
    "ipAddress": {
      "ports": [
        {
          "ip": "[parameters('IPAddress')]",
          "type": "Public"
        }
      ],
      "osType": "Windows"
    }
  }
}

```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.

Internet users [answer choice].

can connect to the container from any device
cannot connect to the container
can only connect to the container from devices that run Windows

If Internet Information Services (IIS) in the container fail, [answer choice].

the container will restart automatically
the container will only restart manually
the container must be redeployed

Answer:

Explanation:

Internet users [answer choice].	can connect to the container from any device
If Internet Information Services (IIS) in the container fail, [answer choice].	the container will restart automatically

NEW QUESTION # 165

HOTSPOT

You need to configure the Device settings to meet the technical requirements and the user requirements.

Which two settings should you modify? To answer, select the appropriate settings in the answer area.

Hot Area:

Answer Area

 Save  Discard |  Got feedback?

Users may join devices to Azure AD ⓘ

All

Selected

None

Selected

No member selected

Additional local administrators on Azure AD joined devices ⓘ

Selected

None

Selected

No member selected

Users may register their devices with Azure AD ⓘ

All

None

Require Multi-Factor Auth to join devices ⓘ

Yes

No

Maximum number of devices per user ⓘ

50

Answer:

Explanation:

Answer Area

 Save  Discard |  Got feedback?

Users may join devices to Azure AD ⓘ

☒ All ☐ Selected ☐ None

Selected
No member selected

Additional local administrators on Azure AD joined devices ⓘ

☐ Selected ☒ None

Selected
No member selected

Users may register their devices with Azure AD ⓘ

 ☒ All ☐ None

Require Multi-Factor Auth to join devices ⓘ

☒ Yes ☐ No

Maximum number of devices per user ⓘ

50

Section: [none]

Explanation:

Box 1: Selected

Only selected users should be able to join devices

Box 2: Yes

Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.

NEW QUESTION # 166

You have an Azure subscription. The subscription includes a virtual network named VNet1. Currently, VNet1 does not contain any subnets.

You plan to create subnets on VNet1 and to use application security groups to restrict the traffic between the subnets. You need to create the application security groups and to assign them to the subnets.

Which four cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Cmdlets

New-AzureRmVirtualNetwork

New-AzureRmNetworkSecurityGroup

New-AzureRmApplicationSecurityGroup

New-AzureRmNetworkSecurityRuleConfig

Add-AzureRmVirtualNetworkSubnetConfig

Answer Area**Answer:****Explanation:**

Answer Area

New-AzureRmNetworkSecurityRuleConfig

New-AzureRmNetworkSecurityGroup

New-AzureRmVirtualNetworkSubnetConfig

New-AzureRmVirtualNetwork

- 1 - New-AzureRmNetworkSecurityRuleConfig
- 2 - New-AzureRmNetworkSecurityGroup
- 3 - New-AzureRmVirtualNetworkSubnetConfig
- 4 - New-AzureRmVirtualNetwork
