AI-900 Trustworthy Exam Content & AI-900 Free Learning Cram

Our accurate, reliable, and top-ranked Microsoft AI-900 exam questions will help you qualify for your Microsoft AI-900

certification on the first try. Do not hesitate and check out excellent Microsoft AI-900 Practice Exam to stand out from the rest of the others.

Microsoft Azure AI Fundamentals Sample Questions (Q231-Q236):

NEW QUESTION # 231

You need to provide customers with the ability to query the status of orders by using phones, social media, or digital assistants. What should you use?

- **A. Azure AI Bot Service**
- B. an Azure Machine Learning model
- C. the Azure AI Translator service
- D. an Azure AI Document Intelligence model

Answer: A

Explanation:

According to the Microsoft Azure AI Fundamentals (AI-900) official study guide and Microsoft Learn module "Identify Azure services for conversational AI," the Azure AI Bot Service is specifically designed to create intelligent conversational agents (chatbots) that can interact with users across multiple communication channels, such as web chat, social media, phone calls, Microsoft Teams, and digital assistants.

In this scenario, customers need the ability to query the status of their orders through various interfaces - including voice and text platforms. Azure AI Bot Service enables this by integrating with Azure AI Language (for understanding natural language), Azure Speech (for speech-to-text and text-to-speech capabilities), and Azure Communication Services (for telephony or chat integration). The bot can interpret user input like "Where is my order?" or "Check my delivery status," call backend systems (such as an order database or API), and then respond appropriately to the user through the same communication channel.

Let's analyze the incorrect options:

* B. Azure AI Translator Service: Used for real-time text translation between languages; it doesn't handle conversation logic or database queries.

* C. Azure AI Document Intelligence model: Extracts data from structured and semi-structured documents (e.g., invoices, receipts), not user queries.

* D. Azure Machine Learning model: Builds and deploys predictive models, but doesn't provide conversational or multi-channel interaction capabilities.

Thus, for enabling multi-channel conversational experiences where customers can inquire about order statuses using voice, chat, or digital assistants, the most appropriate solution is Azure AI Bot Service, as outlined in Azure's AI conversational workload documentation.

NEW QUESTION # 232

When you design an AI system to assess whether loans should be approved, the factors used to make the decision should be explainable.

This is an example of which Microsoft guiding principle for responsible AI?

- **A. transparency**
- B. fairness
- C. privacy and security
- D. inclusiveness

Answer: A

Explanation:

Explanation

Achieving transparency helps the team to understand the data and algorithms used to train the model, what transformation logic was applied to the data, the final model generated, and its associated assets. This information offers insights about how the model was created, which allows it to be reproduced in a transparent way.

NEW QUESTION # 233

Which AI service should you use to create a bot from a frequently asked questions (FAQ) document?

- A. Text Analytics
- B. Speech
- C. QnA Maker
- D. Language Understanding (LUIS)

Answer: C

Explanation:

Section: Describe features of conversational AI workloads on Azure

NEW QUESTION # 234

When training a model, why should you randomly split the rows into separate subsets?

- A. to train multiple models simultaneously to attain better performance
- B. to train the model twice to attain better accuracy
- C. to test the model by using data that was not used to train the model

Answer: C

NEW QUESTION # 235

For each of the following statements, select Yes if the statement is True. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
A smart device in the home that responds to questions such as "When is my next appointment?" is an example of conversational AI.	☐	☐
An interactive webchat feature on a company website can be implemented by using Azure Bot Service.	☐	☐
Automatically generating captions for pre-recorded videos is an example of conversational AI.	☐	☐

Answer:

Explanation:

Statements	Yes	No
A smart device in the home that responds to questions such as "When is my next appointment?" is an example of conversational AI.	☒	☐
An interactive webchat feature on a company website can be implemented by using Azure Bot Service.	☐	☒
Automatically generating captions for pre-recorded videos is an example of conversational AI.	☒	☐

NEW QUESTION # 236

.....

Compared with the education products of the same type, some users only for college students, some only provide for the use of employees, these limitations to some extent, the product covers group, while our AI-900 research material absorbed the lesson, it can satisfy the different study period of different cultural levels of the needs of the audience. For example, if you are a college student, you can study and use online resources through the student column of our AI-900 Study Materials, and you can choose to study in your spare time.
