2025 Dump NCA-6.10 Collection: Nutanix Certified Associate v6.10 - Unparalleled Free PDF Quiz NCA-6.10

In order to meet the different demands of the different customers, these experts from our company have designed three different versions of the NCA-6.10 reference guide. All customers have the right to choose the most suitable version according to their need after buying our study materials. The PDF version of the NCA-6.10 exam prep has many special functions, including download the demo for free, support the printable format and so on. We can make sure that the PDF version of the NCA-6.10 Test Questions will be very convenient for all people. Of course, if you choose our study materials, you will have the chance to experience our PDF version.

Nutanix Certified Associate v6.10 Sample Questions (Q23-Q28):

NEW QUESTION # 23

What is the purpose of the Recycle Bin?

- A. Centralizes the deleted data from the different VMs in the cluster.
- B. Stores the OpLog's most recent deleted data in case of a CVM failure.
- C. Keeps deleted VMs for 24 hours for recovery.
- D. Allows administrators to undo the last five actions.

Answer: C

NEW QUESTION # 24

Which Nutanix Support case priority level indicates that the system is available but experiencing issues that directly impact productivity?

- A. P3
- B. P4
- C. P1
- D. P2

Answer: D

Explanation:

Nutanix Support case priority levels are defined as follows:

- * P1 (Critical):The system is down or severely impacted, requiring immediate attention.
- * P2 (High):The system is available but experiencing issues that directly impact productivity or operations.
- * P3 (Medium):The system is functioning, but there are non-critical issues or questions.
- * P4 (Low):General questions or requests that do not impact system performance.

The scenario described matches P2, where the system is available but productivity is directly affected by the issue.

Nutanix Knowledge Base Article on Support Case Priorities.

NEW QUESTION # 25

An administrator is creating a Linux VM and must decide which is the correct timezone to choose. Which timezone should the administrator select for this VM?

- A. Eastern
- B. Local
- C. Central
- D. UTC

Answer: D

Explanation:

The correct answer is B. UTC.

When creating Linux VMs in a Nutanix environment (or in any enterprise-grade production environment), it is best practice to use UTC(Coordinated Universal Time) as the system timezone. This ensures:

- * Consistency across distributed systems
- * Accurate log correlation
- * Avoidance of issues with daylight saving time (DST)
- * Simplified centralized monitoring and troubleshooting

Clarifications:

- * A (Eastern) and D (Central) are region-specific and may introduce time skew across systems.
- * C (Local) is ambiguous and depends on the underlying hardware or hypervisor setting, which can lead to inconsistent behavior.

Official Reference:

- * Linux Admin Best Practices
- * Nutanix Best Practices Guide - VM Provisioning Section
- * Excerpt: "For consistency across environments, it is recommended to configure all Linux virtual machines to use UTC timezone, particularly in clustered and distributed applications."

NEW QUESTION # 26

An administrator is configuring Erasure Coding on a Redundancy Factor 2 cluster. How many nodes, at a minimum, are necessary?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

For a cluster with Redundancy Factor 2 (RF2), at least 4 nodes are required to configure Erasure Coding.

Erasure Coding (EC) distributes data and parity across nodes to improve storage efficiency while maintaining data protection. RF2 requires a minimum of 4 nodes to ensure sufficient space for data and parity distribution.

Other options:

* 3 nodes: Insufficient for EC with RF2.

* 5 and 6 nodes: Can support EC, but the minimum requirement is 4.

:

Nutanix Administration Guide - Erasure Coding Configuration.

Nutanix Storage Concepts Documentation.

NEW QUESTION # 27

An administrator is performing AHV upgrades on an 8-node cluster configured with Redundancy Factor 3. How many nodes would be placed into maintenance mode simultaneously?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

In a cluster configured with Redundancy Factor 3 (RF3), the system ensures that data is replicated across at least three nodes to tolerate the failure of two nodes. During an AHV upgrade, Nutanix only places one node at a time into maintenance mode, even in an RF3 configuration, to minimize the impact on data redundancy and cluster operations.

* A. 1: Correct, as AHV upgrades proceed node by node in RF3.

* B. 2, C. 3, D. 4: These options are incorrect, as only one node is upgraded at a time regardless of RF3.
