

# 2025 New SSE-Engineer Test Review - Palo Alto Networks Security Service Edge Engineer Realistic Certification Dumps Free PDF Quiz

P.S. Free 2025 Palo Alto Networks SSE-Engineer dumps are available on Google Drive shared by PrepAwayExam: [https://drive.google.com/open?id=1ftcUvnk5G\\_CvejhxamIHAGLFwb3FmHSn](https://drive.google.com/open?id=1ftcUvnk5G_CvejhxamIHAGLFwb3FmHSn)

We provide Palo Alto Networks SSE-Engineer web-based self-assessment practice software that will help you to prepare for the Palo Alto Networks certification exam. Palo Alto Networks SSE-Engineer Web-based software offers computer-based assessment solutions to help you automate the entire Palo Alto Networks Security Service Edge Engineer testing procedure. The stylish and user-friendly interface works with all browsers, including Mozilla Firefox, Google Chrome, Opera, Safari, and Internet Explorer. It will make your certification exam preparation simple, quick, and smart. So, rest certain that you will discover all you need to study for and pass the Palo Alto Networks SSE-Engineer Exam on the first try.

In order to make sure your whole experience of buying our SSE-Engineer study materials more comfortable, our company will provide all people with 24 hours online service. The experts and professors from our company designed the online service system for all customers. If you decide to buy the SSE-Engineer Study Materials from our company, we can make sure that you will have the opportunity to enjoy the best online service provided by our excellent online workers.

## Pass Guaranteed Quiz Palo Alto Networks - Newest SSE-Engineer - New Palo Alto Networks Security Service Edge Engineer Test Review

It is universally acknowledged that the pass rate is the most persuasive evidence to prove how useful and effective a kind of SSE-Engineer practice test is. In terms of our training materials, the pass rate is one of the aspects that we take so much pride in because according to the statistics from the feedbacks of all of our customers, under the guidance of our SSE-Engineer Preparation materials the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field. Just feel rest assured to buy our SSE-Engineer study guide, which definitely will be the best choice for you.

## Palo Alto Networks Security Service Edge Engineer Sample Questions (Q23-Q28):

### NEW QUESTION # 23

Which statement is valid in relation to certificates used for GlobalProtect and pre-logon?

- A. The certificate used for pre-logon must include both Subject and Subject-Alt fields.

- B. A public certificate authority (CA) must sign and validate all certificates used.
- **C. Certificates must be deployed in the Machine Certificate Store.**
- D. The GlobalProtect agent may be used to distribute pre-logon certificates.

**Answer: C**

Explanation:

For GlobalProtect with pre-logon, certificates must be installed in the Machine Certificate Store to ensure that authentication occurs before user login. This allows the GlobalProtect client to establish a VPN connection before the user logs in, enabling access to corporate resources such as domain controllers and authentication services. Using machine certificates ensures secure authentication and eliminates dependency on user credentials at the pre-logon stage.

#### NEW QUESTION # 24

A customer is implementing Prisma Access (Managed by Strata Cloud Manager) to connect mobile users, branch locations, and business-to-business (B2B) partners to their data centers.

The solution must meet these requirements:

The mobile users must have internet filtering, data center connectivity, and remote site connectivity to the branch locations.

The branch locations must have internet filtering and data center connectivity.

The B2B partner connections must only have access to specific data center internally developed applications running on non-standard ports.

The security team must have access to manage the mobile user and access to branch locations.

The network team must have access to manage only the partner access.

Which two options will allow the engineer to support the requirements? (Choose two.)

- **A. Enable eBGP for dynamic routing and configure Remote Networks.**
- B. Configure the CPE with Static Routes pointing to Prisma Access Infrastructure and Mobile User routes.
- **C. Configure Remote Networks and define the branch IP subnets using Static Routes.**
- D. Enable Remote Networks Advertise Default Route.

**Answer: A,C**

Explanation:

Enabling eBGP for dynamic routing and configuring Remote Networks ensures seamless connectivity between branch locations, mobile users, and the data center. eBGP allows Prisma Access to dynamically exchange routes with the Customer Premises Equipment (CPE), optimizing path selection without requiring manual updates. Configuring Remote Networks and defining branch IP subnets using static routes ensures controlled and segmented routing, aligning with security policies. This setup provides proper internet filtering, data center connectivity, and restricted access for B2B partners while keeping management responsibilities aligned.

#### NEW QUESTION # 25

After configuring domain-based split tunnel for zoom.us, how is expected behavior on the client machine confirmed?

- **A. Verify from the routing table.**
- B. Verify zoom.us is resolved by the tunnel assigned DNS server.
- C. Enable debug level logs on GlobalProtect Application.
- D. Ping zoom.us from the CLI.

**Answer: A**

Explanation:

After configuring domain-based split tunneling for zoom.us, the expected behavior can be confirmed by checking the routing table on the client machine. If split tunneling is correctly configured, the traffic for zoom.us should be routed outside the GlobalProtect VPN tunnel, while other traffic follows the tunnel path.

Reviewing the routing table ensures that only the intended traffic is excluded from the tunnel, confirming that the split tunnel configuration is working as expected.

#### NEW QUESTION # 26

A company has a Prisma Access deployment for mobile users in North America and Europe. Service connections are deployed to the data centers on these continents, and the data centers are connected by private links.

With default routing mode, which action will verify that traffic being delivered to mobile users traverses the service connection in the appropriate regions?

- A. Configure BGP on the customer premises equipment (CPE) to prefer the MED attribute on the mobile user prefixes in its respective Prisma Access region.
- **B. Configure each service connection to filter out the mobile user pool prefixes from the other region in the advertisements to the data center.**
- C. Configure BGP on the customer premises equipment (CPE) to prefer the assigned community string attribute on the mobile user prefixes in its respective Prisma Access region.
- D. Configure each service connection to prepend the BGP ASN five times for mobile user pool prefixes originating from the other region.

**Answer: B**

Explanation:

In Prisma Access's default routing mode, the service connections establish BGP sessions with the customer premises equipment (CPE) in the data centers. To ensure traffic destined for mobile users in a specific region (e.g., North America) traverses the service connection in that same region, you need to control the route advertisements.

Filtering out the mobile user pool prefixes from the other region on each service connection achieves this by:

\* Preventing the data center in one region from learning the specific mobile user prefixes of the other region. For example, the North American service connection would filter out the mobile user pool prefixes allocated to European users.

\* Ensuring that when a data center needs to send traffic to a mobile user, it will only see and use the route advertised by the service connection in the appropriate geographical region. This forces the traffic to enter the Prisma Access infrastructure through the intended regional service connection.

Let's analyze why the other options are incorrect based on official documentation regarding default routing mode:

\* A. Configure BGP on the customer premises equipment (CPE) to prefer the assigned community string attribute on the mobile user prefixes in its respective Prisma Access region. While BGP communities can be used for influencing routing decisions, in the context of default routing mode and ensuring regional traffic flow, relying solely on the CPE to prefer community strings might not be the most robust or direct method to guarantee traffic traverses the correct regional service connection. The service connection itself needs to control the advertisement of prefixes.

\* C. Configure BGP on the customer premises equipment (CPE) to prefer the MED attribute on the mobile user prefixes in its respective Prisma Access region. The BGP MED (Multi-Exit Discriminator) attribute is primarily used to influence the path selection between autonomous systems (AS) or within the same AS at different entry points. In this scenario, where service connections are advertising prefixes, filtering at the source (service connection) is a more direct and reliable way to ensure regional traffic flow than relying on the MED attribute on the CPE.

\* D. Configure each service connection to prepend the BGP ASN five times for mobile user pool prefixes originating from the other region. BGP AS path prepending is a mechanism to make a path less desirable. While this could influence routing, it doesn't guarantee that traffic will always take the intended regional path. Filtering provides a more definitive control over which routes are advertised and learned.

Therefore, configuring each service connection to filter out the mobile user pool prefixes from the other region in the advertisements to the data center is the verified method to ensure traffic destined for mobile users traverses the service connection in the appropriate region when using Prisma Access in default routing mode.

## NEW QUESTION # 27

When a review of devices discovered by IoT Security reveals network routers appearing multiple times with different IP addresses, which configuration will address the issue by showing only unique devices?

- A. Delete all duplicate devices, keeping only those discovered using their management IP addresses.
- B. Add the duplicate entries to the ignore list in IoT Security.
- C. Create a custom role to merge devices with the same hostname and operating system.
- **D. Merge individual devices into a single device with multiple interfaces.**

**Answer: D**

Explanation:

When network routers appear multiple times with different IP addresses in IoT Security, it is likely because they have multiple interfaces with separate IPs. Merging these entries into a single device with multiple interfaces ensures that the system correctly identifies each router as a unique entity while maintaining visibility across all its interfaces. This approach prevents unnecessary duplicates, improves asset management, and enhances security monitoring.

## NEW QUESTION # 28

.....

We provide online customer service to the customers for 24 hours per day and we provide professional personnel to assist the client in the long distance online. If you have any questions and doubts about the Palo Alto Networks Security Service Edge Engineer guide torrent we provide before or after the sale, you can contact us and we will send the customer service and the professional personnel to help you solve your issue about using SSE-Engineer Exam Materials. If the clients have any problems or doubts about our SSE-Engineer exam materials you can contact us by sending mails or contact us online and we will reply and solve the client's problems as quickly as we can.

**Certification SSE-Engineer Dumps:** <https://www.prepawayexam.com/Palo-Alto-Networks/braindumps.SSE-Engineer.etc.file.html>

We offer free demos as your experimental tryout before downloading our real SSE-Engineer actual exam, OUTSMART SUPPORT, Now the SSE-Engineer Palo Alto Networks Security Service Edge Engineer exam dumps have become the first choice of SSE-Engineer exam candidates, We play an active role in making every country and community in which we selling our SSE-Engineer practice test a better place to live and work, As preparation for Certification SSE-Engineer Dumps Certification requires particle training to grasp the various aspects of the certification, PrepAwayExam Certification SSE-Engineer Dumps Certification SSE-Engineer Dumps Certificationalso provides you lab facility.

Mark the Generate Policy checkbox, To further SSE-Engineer enhance the appearance of the text in a paragraph, you can quickly add a border and shading to selected text, We offer free demos as your experimental tryout before downloading our real SSE-Engineer Actual Exam.

## Quiz Palo Alto Networks - Reliable New SSE-Engineer Test Review

OUTSMART SUPPORT, Now the SSE-Engineer Palo Alto Networks Security Service Edge Engineer exam dumps have become the first choice of SSE-Engineer exam candidates, We play an active role in making every country and community in which we selling our SSE-Engineer practice test a better place to live and work.

As preparation for Network Security Administrator Certification requires particle training New SSE-Engineer Test Review to grasp the various aspects of the certification, PrepAwayExam Network Security Administrator Certificationalso provides you lab facility.
