2025 Newest Valid Professional-Cloud-Architect Exam Sample Help You Pass Professional-Cloud-Architect Easily

The reason why many people choose PracticeTorrent is that PracticeTorrent brings more convenience. IT elites of PracticeTorrent use their professional eye to search the latest Professional-Cloud-Architect certification training materials, which ensure the accuracy of our Professional-Cloud-Architect Exam Dumps. If you still worry, you can download Professional-Cloud-Architect free demo before purchase.

Earning the Google Professional-Cloud-Architect certification demonstrates that the candidate has the knowledge and skills necessary to design and implement cloud solutions using GCP technologies. Google Certified Professional - Cloud Architect (GCP) certification is highly valued by employers, as it demonstrates that the candidate has the ability to design and implement scalable, efficient, and secure cloud solutions that meet the needs of modern businesses.

Google Professional-Cloud-Architect Certification Exam is a valuable asset for professionals who work with GCP. It validates the candidate's skills and knowledge required to design, develop, and manage cloud solutions using GCP services. Google Certified Professional - Cloud Architect (GCP) certification exam covers various topics related to cloud architecture, and passing the exam demonstrates the candidate's ability to design and implement cloud solutions using GCP services.

New Google Professional-Cloud-Architect Test Labs, Professional-Cloud-Architect Authorized Certification

Google Professional-Cloud-Architect certification exams are a great way to analyze and evaluate the skills of a candidate effectively. Big companies are always on the lookout for capable candidates. You need to pass the Google Professional-Cloud-Architect Certification Exam to become a certified professional. This task is considerably tough for unprepared candidates however with the right Professional-Cloud-Architect prep material there remains no chance of failure.

Google Professional-Cloud-Architect certification exam covers a wide range of topics related to GCP. These topics include cloud architecture, security, networking, data storage, data processing, and migration. Professional-Cloud-Architect exam requires the candidate to have a deep understanding of GCP services, their features, and how they can be used to design and implement cloud solutions. Professional-Cloud-Architect Exam also requires the candidate to have hands-on experience with GCP services and tools.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q206-Q211):

NEW QUESTION # 206
For this question, refer to the Dress4Win case study. You want to ensure that your on-premises architecture meets business requirements before you migrate your solution.
What change in the on-premises architecture should you make?

- A. Resize compute resources to match predefined Compute Engine machine types.
- B. Containerize the micro services and host them in Google Kubernetes Engine.
- C. Downgrade MySQL to v5.7, which is supported by Cloud SQL for MySQL.
- D. Replace RabbitMQ with Google Pub/Sub.

Answer: A

Explanation:
Reference:

NEW QUESTION # 207
You are deploying an application on App Engine that needs to integrate with an on-premises database. For security purposes, your on-premises database must not be accessible through the public Internet.
What should you do?

- A. Deploy your application on App Engine flexible environment and use Cloud VPN to limit access to the on-premises database.
- B. Deploy your application on App Engine flexible environment and use App Engine firewall rules to limit access to the on-premises database.
- C. Deploy your application on App Engine standard environment and use Cloud VPN to limit access to the on-premises database.
- D. Deploy your application on App Engine standard environment and use App Engine firewall rules to limit access to the open on-premises database.

Answer: A

NEW QUESTION # 208
You are working in a highly secured environment where public Internet access from the Compute Engine VMs is not allowed. You do not yet have a VPN connection to access an on-premises file server. You need to install specific software on a Compute Engine instance. How should you install the software?

- A. Upload the required installation files to Cloud Storage and use firewall rules to block all traffic except the IP address range for Cloud Storage. Download the files to the VM using gsutil.
- B. Upload the required installation files to Cloud Storage. Configure the VM on a subnet with a Private Google Access subnet. Assign only an internal IP address to the VM. Download the installation files to the VM using gsutil.
- C. Upload the required installation files to Cloud Source Repositories and use firewall rules to block all traffic except the IP address range for Cloud Source Repositories. Download the files to the VM using gsutil.
- D. Upload the required installation files to Cloud Source Repositories. Configure the VM on a subnet with a Private Google Access subnet. Assign only an internal IP address to the VM. Download the installation files to the VM using gcloud.

Answer: A

NEW QUESTION # 209
Your customer is moving an existing corporate application to Google Cloud Platform from an on- premises data center. The business owners require minimal user disruption. There are strict security team requirements for storing passwords.
What authentication strategy should they use?

- A. Provision users in Google using the Google Cloud Directory Sync tool.
- B. Federate authentication via SAML 2.0 to the existing Identity Provider.

- C. Ask users to set their Google password to match their corporate password.
- D. Use G Suite Password Sync to replicate passwords into Google.

Answer: A

Explanation:
Provision users to Google's directory
The global Directory is available to both Cloud Platform and G Suite resources and can be provisioned by a number of means. Provisioned users can take advantage of rich authentication features including single sign-on (SSO), OAuth, and two-factor verification.
You can provision users automatically using one of the following tools and services:
Google Cloud Directory Sync (GCDS)
Google Admin SDK
A third-party connector
GCDS is a connector that can provision users and groups on your behalf for both Cloud Platform and G Suite. Using GCDS, you can automate the addition, modification, and deletion of users, groups, and non-employee contacts. You can synchronize the data from your LDAP directory server to your Cloud Platform domain by using LDAP queries. This synchronization is one-way: the data in your LDAP directory server is never modified.

NEW QUESTION # 210
Your company is migrating its on-premises data center into the cloud. As part of the migration, you want to integrate Kubernetes Engine for workload orchestration. Parts of your architecture must also be PCI DSScompliant.
Which of the following is most accurate?

- A. All Google Cloud services are usable because Google Cloud Platform is certified PCI-compliant.
- B. Kubernetes Engine and GCP provide the tools you need to build a PCI DSS-compliant environment.
- C. App Engine is the only compute platform on GCP that is certified for PCI DSS hosting.
- D. Kubernetes Engine cannot be used under PCI DSS because it is considered shared hosting.

Answer: B

Explanation:
Explanation
It is important to note that customers are still responsible for ensuring that their applications are PCI DSS compliant.
