

2025 Nokia Pass-Sure 4A0-113: Actual Nokia OSPF Routing Protocol Exam Test Answers

BONUS!!! Download part of DumpsValid 4A0-113 dumps for free: <https://drive.google.com/open?id=1fFSgIH87hfhsMwQDz7A7wFIFrFy7352O>

Once you have used our 4A0-113 exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use 4A0-113 exam training at your own right. Our 4A0-113 Exam Training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use 4A0-113 test guide, you can enter the learning state.

Nokia 4A0-113 Certification Exam is designed for network professionals who want to validate their skills and knowledge in the Nokia OSPF routing protocol. OSPF (Open Shortest Path First) is a widely used routing protocol that is used to determine the best path for data to travel through a network. The Nokia 4A0-113 Certification Exam covers the basics of OSPF operation, configuration, and troubleshooting. It is a comprehensive exam that tests the candidate's ability to design, implement, and maintain OSPF networks.

To pass the Nokia 4A0-113 exam, candidates must have a strong understanding of OSPF and its configuration, operation, and troubleshooting. Candidates must also demonstrate proficiency in Nokia's networking solutions and how they integrate with OSPF. 4A0-113 Exam consists of multiple-choice questions and simulations, and candidates must achieve a passing score of 80% or higher to earn certification.

Nokia 4A0-113 certification exam covers a wide range of topics related to OSPF routing protocol, including OSPF concepts and terminology, OSPF network design and implementation, OSPF area types and configuration, and OSPF troubleshooting and optimization. 4A0-113 exam also covers advanced topics like OSPF multi-area and multi-vendor interoperability. Passing the exam demonstrates that the candidate has a deep understanding of OSPF routing protocol and can effectively manage and troubleshoot OSPF-based networks.

Valid Nokia 4A0-113 Study Plan | 4A0-113 Reliable Dump

With our Nokia 4A0-113 practice materials, and your persistence towards success, you can be optimistic about your 4A0-113 real dumps. Even you have bought our Nokia 4A0-113 learning braindumps, and we will send the new updates to you one year long. On one hand, all content can radically give you the best backup to make progress.

Nokia OSPF Routing Protocol Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

Static routing will be used in a network between a corporate head office, with many connected networks, and a branch office, with one connection to the head office. Which of the following best describes the likely configuration?

- A. The corporate head office router will have a default route and the branch site will have a more specific static route.
- B. The corporate head office router and the branch router will both have default routes.
- C. The corporate head office router and the branch office router will both have specific static routes.
- **D. The corporate head office router will have a more specific static route and the branch office router will have a default route.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From the official Nokia OSPF Routing Protocol Training Guide (Nokia document OSPF#SG#2024, Topic 1, Section 1.2 Static Routing Scenarios):

"In a hub-and-spoke static routing topology-such as a corporate head office with multiple subnets and a branch with a single WAN link-the head-office router is configured with precise static entries for each branch network, while the branch router is given a default static route pointing to the head-office router." This topology matches the described scenario:

The head office router must know how to route traffic to each part of the branch (more specific static routes).

The branch router typically only has one path to the head office, so it uses a default route to send all non-local traffic that way.

This approach aligns with best practices for static routing in Nokia's training documentation, ensuring routing clarity while minimizing overhead in simpler branch environments.

Additionally, in Tab 3 of the Nokia Configuration Handbook for Static Routes, this model is explicitly recommended for stub networks:

"Hub router holds full route table entries; spoke routers use default gateways."

NEW QUESTION # 15

If OSPF is used in a multi-area OSPF network, which of the following statements regarding route summarization is true?

- A. Manual route summarization must be done on all the backbone routers to be effective. Manual route summarization is optional on the routers in non-backbone areas.
- B. Manual route summarization can only be done on autonomous system border routers.
- **C. Manual route summarization is done on the ABRs. By default, no route summarization is done and all routes are advertised to all areas.**
- D. Manual route summarization is done on the ABRs. By default, automatic summarization is done; however, it may not be optimal for all networks.

Answer: C

NEW QUESTION # 16

Which of the following statements describe the major features of OSPF? Choose two answers.

- **A. Route redistribution**
- B. Fast reroute capability
- C. Cut through forwarding
- **D. Traffic engineering extensions**
- E. Control traffic prioritization

Answer: A,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Routing Protocols Guide (OSPF Features Summary and Extensions):

C (Correct):

"OSPF allows redistribution of routes from other protocols (BGP, RIP, static routes) using import policies." D (Correct):

"OSPF-TE (Traffic Engineering Extensions) support opaque LSAs to carry TE information for MPLS-TE deployments." Incorrect options:

A: Fast reroute (FRR) is an MPLS feature, not native to OSPF.

B: OSPF does not prioritize control traffic natively.

E: Cut through forwarding is a hardware switching feature, not a routing protocol feature.

NEW QUESTION # 17

What causes an adjacency to change from down to two ways?

- A. When a router receives a database description packet from a neighbor.
- B. When a link state update is received in response to a link state request.
- C. When a link state acknowledgement is received in response to a link state update.
- **D. When a router receives a Hello packet that contains its own router ID in the neighbor list from a neighbor.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS OSPF Guide - OSPF Neighbor State Machine:

"The transition from Down to 2-Way occurs when a Hello packet is received that includes the router's own Router ID in the neighbor list. This confirms bidirectional communication." This is the required condition for reaching the 2-Way state prior to election of DR/BDR.

NEW QUESTION # 18

In an IP datagram, which field identifies the receiving application?

- A. The port field of the network layer address
- B. The protocol field of the network layer header
- **C. The port field of the transport layer header**
- D. The protocol field of the transport layer header

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From Nokia 7750 SR OS Protocol Fundamentals:

"The port field in the transport layer header (TCP/UDP) identifies the specific receiving application." Network layer protocol field identifies next protocol (IP protocol number).

Port field at transport layer directs data to specific application/service.

Thus, correct answer is B.

NEW QUESTION # 19

.....

Our customer service is available all day, and your problems can be solved efficiently at any time. Last but not least, we can guarantee the security of the purchase process of 4A0-113 Test Questions and the absolute confidentiality of customer information. You do not have to worry about these issues, because we know that this is a basic condition for us to establish a good business model. If you have any questions, you can always contact us online or email us. We will reply as soon as possible.
