The Secure-Software-Design is an import way to improve our competitiveness, and our Secure-Software-Design exam dump will help you 100% pass your exam and get a certification. First of all, our Secure-Software-Design study materials are constantly being updated and improved so that you can get the information you need and get a better experience. Our Secure-Software-Design test questions have been following the pace of digitalization, constantly refurbishing, and adding new things. I hope you can feel the Secure-Software-Design Exam Prep sincerely serve customers. We also attach great importance to the opinions of our customers. The duration of this benefit is one year, and Secure-Software-Design exam prep look forward to working with you.

WGU certification can be used in different IT Company and it will be your access to the IT elites. But you may find that the Secure-Software-Design study materials are difficult for you. You need much time to prepare and the cost of the Secure-Software-Design Practice Exam is high, you wonder it will be a great loss for you when fail the exam. It will be bad thing. ValidBraindumps will help you to reduce the loss and save the money and time for you.

WGU Secure-Software-Design Exam Dumps in PDF Format

If you want to ace the WGUSecure Software Design (KEO1) Exam (Secure-Software-Design) test, the main problem you may face is not finding updated Secure-Software-Design practice questions to crack this test quickly. After examining the situation, the ValidBraindumps has come with the idea to provide you with updated and actual WGU Secure-Software-Design Exam Dumps so you can pass WGUSecure Software Design (KEO1) Exam (Secure-Software-Design) test on the first attempt. The product of ValidBraindumps has many different premium features that help you use this product with ease. The study material has been made and updated after consulting with a lot of professionals and getting customers' reviews.

WGUSecure Software Design (KEO1) Exam Sample Questions (Q111-Q116):

NEW QUESTION # 111

Due to positive publicity from the release of the new software product, leadership has decided that it is in the best interests of the company to become ISO 27001 compliant. ISO 27001 is the leading international standard focused on information security. Which security development life cycle deliverable is being described?

- A. Third-party security review
- B. Security strategy for M&A products
- C. External vulnerability disclosure response process
- D. Post-release certifications

Answer: D

NEW QUESTION # 112

In which step of the PASTA threat modeling methodology is vulnerability and exploit analysis performed?

- A. Define objectives
- **B. Attack modeling**
- C. Application decomposition
- D. Define technical scope

Answer: B

Explanation:

In the PASTA (Process for Attack Simulation and Threat Analysis) threat modeling methodology, vulnerability and exploit analysis is performed during the Attack modeling step. This step involves identifying potential threats and vulnerabilities within the system and understanding how they could be exploited.

* Attack modeling is a critical phase where the focus is on simulating attacks based on identified vulnerabilities. It allows for a deep understanding of the threats in the context of the application's architecture and system design.

* During this phase, security analysts use their knowledge of the system's technical scope and application decomposition to simulate how an attacker could exploit the system's vulnerabilities. This helps in prioritizing the risks and planning appropriate mitigation strategies.

* The goal of attack modeling is not just to identify vulnerabilities but also to understand the potential impact of exploits on the system and the business, which is essential for developing a robust security posture.

References: The information provided is aligned with the PASTA methodology as described in resources such as VerSprite¹ and the OWASP Foundation². These sources detail the seven stages of PASTA, with attack modeling being a key component of the process.

NEW QUESTION # 113

Which secure coding best practice says to only use tested and approved components and use task-specific, built-in APIs to conduct operating system functions?

- **A. General Coding Practices**
- B. Authentication and Password Management
- C. Session Management
- D. Data Protection

Answer: A

NEW QUESTION # 114

Which secure coding practice involves clearing all local storage as soon as a user logs off for the night and will automatically log a user out after an hour of inactivity?

- A. Communication security
- **B. Session management**
- C. System configuration
- D. Access control

Answer: B

Explanation:

The practice of clearing all local storage when a user logs off and automatically logging a user out after an hour of inactivity falls under the category of Session Management. This is a security measure designed to prevent unauthorized access to a user's session and to protect sensitive data that might be stored in the local storage. By clearing the local storage, any tokens, session identifiers, or other sensitive information are removed, reducing the risk of session hijacking or other attacks. The automatic logout feature ensures that inactive sessions do not remain open indefinitely, which could otherwise be exploited by attackers.

References: The information aligns with the secure coding practices outlined by the OWASP Foundation¹, and is supported by common practices in web development for managing sessions and local storage².

NEW QUESTION # 115

In which step of the PASTA threat modeling methodology will the team capture infrastructure, application, and software dependencies?

- A. Define objectives
- B. Attack modeling
- C. Risk and impact analysis
- **D. Define technical scope**

Answer: D

Explanation:

The step of the PASTA threat modeling methodology where the team will capture infrastructure, application, and software dependencies is the Define technical scope step. This step involves detailing the technical elements of the project, which includes understanding and documenting the infrastructure, applications, and software dependencies that are critical to the system's operation and security.

References: The PASTA (Process for Attack Simulation and Threat Analysis) threat modeling methodology is a seven-step process that includes defining the technical scope as a critical step for capturing the necessary technical details of the system being analyzed¹²³.

NEW QUESTION # 116

.....

The pass rate of the Secure-Software-Design training materials is 99%, we pass guarantee, and if you can't pass, money guarantee for your failure, that is money will return to your account. You just need to send the participation and the failure scanned, money will be returned. We can ensure that your money will be returned, either the certification or the money back. Besides the Secure-Software-Design Training Materials include the question and answers with high-quality, you will get enough practice.
