New Reliable NSK300 Test Tips 100% Pass | Reliable Exam NSK300 Price: Netskope Certified Cloud Security Architect

Our company is a professional certification exam materials provider, we have occupied in this field for more than ten years, and therefore we have rich experience. NSK300 exam braindumps are high quality, because we have a professional team to collect the first-hand information for the exam, we can ensure that you can get the latest information for the exam. In addition, our company is strict with the quality and answers for NSK300 Exam Materials, and therefore you can use them at ease. Our NSK300 exam braindumps are known as instant access to download, you can obtain the downloading link and password within ten minutes.

Netskope Certified Cloud Security Architect Sample Questions (Q40-Q45):

NEW QUESTION # 40

You created a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, but determine that the policy is too

restrictive. Specifically, users are complaining that normal websites have stopped rendering properly. How would you solve this problem?

- A. Create a Real-time Protection policy to allow the Download activity to the Cloud Storage category
- **B. Create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category**
- C. Create a Real-time Protection policy to allow the Browse activity to the Amazon S3 application.
- D. Create a Real-time Protection policy to allow the Download activity to the Amazon S3 application

Answer: B

Explanation:

To solve the problem of normal websites not rendering properly due to a Real-time Protection policy that blocks all activities to non-corporate S3 buckets, the best solution is to create a Real-time Protection policy to allow the Browse activity to the Cloud Storage category. This approach will enable users to view content from various cloud storage services, including Amazon S3, without allowing full access to non-corporate S3 buckets. It's a more granular and less restrictive policy that allows necessary browsing activities while still maintaining control over the upload and download activities to non-corporate buckets¹.

The Netskope Knowledge Portal provides information on how to configure Real-time Protection policies, including how to set up policies that allow certain activities while blocking others¹. Additionally, the Netskope Community Forum offers insights into best practices for policy configuration to avoid overly restrictive rules that can impact normal web browsing

NEW QUESTION # 41

You want to verify that Google Drive is being tunneled to Netskope by looking in the nsdebuglog file. You are using Chrome and the Netskope Client to steer traffic. In this scenario, what would you expect to see in the log file?

- A.

```
2022/01/0 01:00:00.001010 stAgentNE p752b t28da7 info AppProxyProvider.mm:303 main New UDP flow: Process = google chrome helper, IP:Port = [8.8.8.8:53]
```

- **B.**

```
2022/01/0 01:00:00.001010 stAgentNE p752b t28da7 info tunnel.cpp:712 nsTunnel TLS [sessId 502] Tunneling flow from addr: 1.0.0.1:64000, process: google drive to host: play.googleapis.com, addr: 172.217.4.46:443 to nsProxy
```

- C.

```
2022/01/0 01:00:00.001010 stAgentNE p752b t28da7 info bypassAppMgr.cpp:538 BypassAppMgr Bypassing UDP flow to process google chrome helper ip: 172.217.4.46, Port: 443, host: drive.google.com
```

- D.

```
2022/01/0 01:00:00.001010 stAgentNE p752b t28da7 info tunnel.cpp:712 nsTunnel TLS [sessId 502] Tunneling flow from addr: 1.0.0.1:63720, process: google chrome helper to host: drive.google.com, addr: 172.217.4.46:443 to nsProxy
```

Answer: B

Explanation:

When verifying that Google Drive traffic is being tunneled to Netskope using Chrome and the Netskope Client, you would expect to see log entries indicating that the traffic is being directed through Netskope's proxy. Specifically, Option A is correct as it shows the process "google drive" being tunneled to nsProxy. The log entry for Option A indicates that a TLS tunneling flow from a local address and process (Google Drive) is being directed to a host (play.googleapis.com) and then to Netskope's proxy (nsProxy). This is consistent with how Netskope tunnels specified traffic for security and policy enforcement¹.

NEW QUESTION # 42

Your client is an NG-SWG customer. They are going to use the Explicit Proxy over Tunnel (EPoT) steering method. They have a specific list of domains that they do not want to steer to the Netskope Cloud. What would accomplish this task?

- A. Create a real-time policy with a bypass action.
- B. Define exceptions in the Netskope steering configuration
- C. Use an SSL decryption policy.
- **D. Define exception domains in the PAC file.**

Answer: D

Explanation:

To accomplish the task of not steering specific domains to the Netskope Cloud while using the Explicit Proxy over Tunnel (EPoT)

steering method, you would define exception domains in the PAC file (A). This is because the PAC file is used to specify which domains should bypass the proxy and connect directly, thus allowing for granular control over the traffic that is steered to Netskope1.

NEW QUESTION # 43

Your customer is currently using Directory Importer with Active Directory (AD) to provision users to Netskope. They have recently acquired three new companies (A, B, and C) and want to onboard users from the companies onto the Netskope platform.

Information about the companies is shown below.

- Company A uses Active Directory.
- Company B uses Azure AD.
- Company C uses Okta Universal Directory.

Which statement is correct in this scenario?

- A. Users from Company B and Company C cannot be provisioned because the customer is already using AD Importer.
- B. Either Company B or Company C users cannot be provisioned because integration with only one SCIM solution is allowed.
- C. Company A users cannot be provisioned to Netskope because the customer is already using AD Importer to import users from another Active Directory environment.
- **D. Users from Companies A, B, and C can be provisioned to Netskope by deploying additional AD Importers and integrating more than one SCIM solution.**

Answer: D

Explanation:

Users from Companies A, B, and C can indeed be provisioned to Netskope. Company A, which uses Active Directory, can continue to use the existing AD Importer. For Company B that uses Azure AD and Company C that uses Okta Universal Directory, integration with SCIM (System for Cross-domain Identity Management) solutions is possible. Netskope supports provisioning users from multiple directories, including Active Directory and cloud-based identity providers like Azure AD and Okta, by using additional AD Importers and integrating more than one SCIM solution12.

The correct approach for provisioning users from different companies that use various directory services is supported by Netskope's capabilities to integrate with multiple identity providers and directory services, as outlined in their documentation and community resources12.

NEW QUESTION # 44

Users in your network are attempting to reach a website that has a self-signed certificate using a GRE tunnel to Netskope. They are currently being blocked by Netskope with an SSL error. How would you allow this traffic?

- A. Set the No SNI setting in Netskope to Bypass.
- **B. Configure a Do Not Decrypt SSL Decryption rule to allow traffic to pass.**
- C. Configure a Real-time Protection policy with the action set to Allow.
- D. Ensure that the users add the self-signed certificate to their local certificate store.

Answer: B

NEW QUESTION # 45

.....

There are three different versions of our NSK300 study guide which are PDF, Software and APP online versions. For their varied advantages, our NSK300 learning questions have covered almost all the interests and habits of varied customers groups. No matter you are a student, a working staff, or even a house wife, you will find the exact version of your NSK300 Exam Materials to offer you a pleasant study experience.
