VMware vSphere Foundation 5.2 Administrator Sample Questions (Q69-Q74):

NEW QUESTION # 69
While preparing to enable Application Virtual Networks (AVNs) and deploying Aria Suite components, an administrator plans to deploy an NSX Edge cluster.
What is a requirement for deploying the NSX Edge cluster?

- A. The Edge cluster must be configured for NSX Federation.
- B. The Edge transport nodes must be configured with an MTU of 1500.
- C. The Edge transport nodes must be deployed using the 'large' form factor.
- D. The Edge cluster must be deployed in the management domain.

Answer: D

Explanation:
When deploying an NSX Edge cluster in a VMware Cloud Foundation (VCF) environment, it must be deployed in the management domain. The management domain is responsible for managing and orchestrating various resources, including the NSX Edge cluster, which is crucial for network virtualization and security within the environment.

NEW QUESTION # 70
Which feature of VMware Data Services Manager enhances database security and compliance?

- A. Automated workload migration
- B. Network traffic optimization
- C. Database-Level Authentication
- D. Storage replication

Answer: C

Explanation:
VMware Data Services Manager enhances database security and compliance by providing Database-Level Authentication, which ensures that access to databases is tightly controlled and that only authorized users can access sensitive database information. This is critical for maintaining security and compliance with industry standards and regulations.

NEW QUESTION # 71
An administrator is tasked with deploying a new application that requires both virtual machines and containers.
Which two components of VMware Cloud Foundation would be utilized to provide a unified platform for managing these workloads? (Choose two.)

- A. Aria Suite Lifecycle
- B. Aria Operations
- C. IaaS Control Plane
- D. NSX
- E. HCX

Answer: B,D

Explanation:
Aria Operations: Aria Operations (formerly vRealize Operations) provides a unified platform for managing both virtual machines (VMs) and containers, offering monitoring, analytics, and performance management for the entire environment.
NSX: NSX provides network virtualization and security, which can be used to manage network traffic for both VMs and containers, offering a consistent networking model for both workloads.

NEW QUESTION # 72

An administrator logged into NSX Manager to view host details. The administrator noticed that the "Tunnel" status for the ESXi hosts, in the VI workload domain, is showing down.

What is a possible reason the ESXi host tunnels are showing down in NSX?

- A. The overlay traffic is being blocked by the gateway firewall.
- B. The host TEP IP addresses are being dynamically assigned through DHCP instead of being statically assigned.
- C. The MTU setting for the host TEPs has been set to 1500.
- D. The IGMP has been disabled on the network.

Answer: C

Explanation:

The "Tunnel" status in NSX indicates the status of the VXLAN tunnels used for communication between ESXi hosts. If the MTU setting for the host Tunnel Endpoint (TEP) is incorrectly set to 1500, this can cause issues with VXLAN encapsulation, as VXLAN packets typically require an MTU of at least 1600 bytes to function correctly. Setting the MTU too low can cause packet drops and result in the tunnel status being down.

NEW QUESTION # 73

Arrange the steps in the correct order to resolve host connectivity issues.
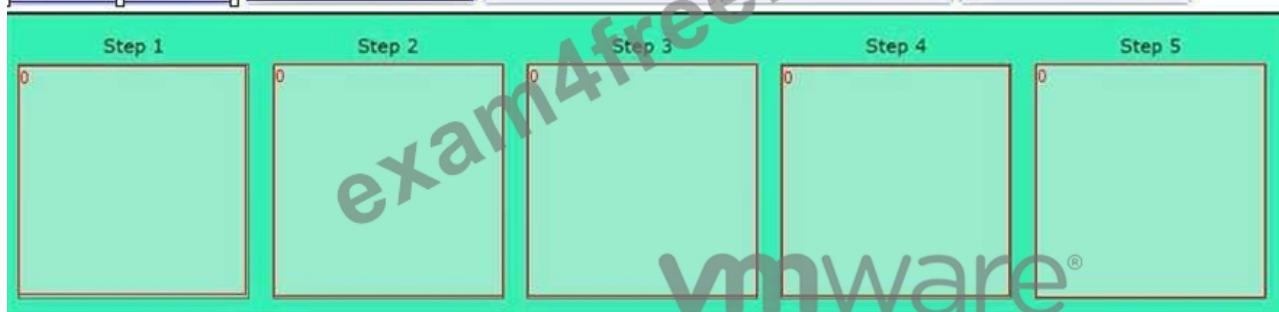

Answer:

Explanation:
