

2025 Professional C-IBP-2502 Reliable Test Sims Help You Pass C-IBP-2502 Easily

BraindumpsPrep cares for your queries also, there is a competition going on in market who is offering C-IBP-2502 Study Material, but to remove all the ambiguities, BraindumpsPrep offers you to try a free demo of actual C-IBP-2502 exam questions. The free demo will give you a clear image of what exactly BraindumpsPrep offers you. You may buy the product if you are satisfied with the demo. BraindumpsPrep also offers you a best feature of free updates. We update the product on a consistent basis. We own a dedicated team of experts in standby, who make the necessary changes in the material, as and when required.

SAP C-IBP-2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Planning Operators & Application: Jobs This section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.
Topic 2	<ul style="list-style-type: none">General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Topic 3	<ul style="list-style-type: none">Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Topic 4	<ul style="list-style-type: none">Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Topic 5	<ul style="list-style-type: none">Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.
Topic 6	<ul style="list-style-type: none">Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.

Topic 7	<ul style="list-style-type: none"> • Key Figures & Attributes: This section of the exam measures the skills of supply chain analysts and focuses on the key figures and attributes used in planning. It covers how to define and configure key figures to ensure accurate data representation and decision-making. Candidates are also tested on their ability to manage attributes that support various planning scenarios.

Valid C-IBP-2502 Reliable Test Sims bring you Fantastic Certification C-IBP-2502 Questions for SAP SAP Certified Associate - SAP IBP for Supply Chain

Infinite striving to be the best is man's duty. We have the responsibility to realize our values in the society. Of course, you must have enough ability to assume the tasks. Then our C-IBP-2502 learning quiz can give you some help. First of all, you can easily pass the C-IBP-2502 Exam and win out from many candidates for our C-IBP-2502 study materials are the most effective exam materials in the market. Secondly, you can also learn a lot of the specialized knowledge at the same time.

SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q70-Q75):

NEW QUESTION # 70

The Planner Workspaces is an important User Interface of SAP IBP for Supply Chain. What are the value drivers to use this as a planner? Note: There are 3 correct answers to this question.

- A. It combines various components into one user interface
- B. It can trigger SAP S/4HANA transactions in real time
- C. It combines the data from multiple planning areas into one user interface
- D. Application jobs can be started from this user interface
- E. Issues can be identified and solved with special functions

Answer: A,D,E

Explanation:

Planner Workspaces in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and workflows, enhancing planner productivity. Its value drivers are outlined in SAP IBP's UI documentation.

* Option A: Issues can be identified and solved with special functions This is correct. Alerts and playbooks in Planner Workspaces help identify and resolve issues (e.g., supply shortages), a key value driver, per SAP IBP's features.

* Option B: It combines various components into one user interface This is correct. It integrates planning views, charts, and alerts into a single UI, streamlining workflows, a core benefit, per SAP IBP's documentation.

* Option C: It can trigger SAP S/4HANA transactions in real time This is incorrect. Planner Workspaces focuses on IBP planning, not real-time S/4HANA transaction execution, which requires integration tools like CI-DS.

* Option D: It combines the data from multiple planning areas into one user interface This is incorrect. It operates within one planning area; combining multiple areas requires separate configurations or views, not a native feature.

* Option E: Application jobs can be started from this user interface This is correct. Planners can trigger jobs (e.g., Copy Operator) directly from Planner Workspaces, enhancing efficiency, per SAP IBP's UI capabilities.

Thus, A, B, and E are value drivers, per SAP IBP's official Planner Workspaces description.

NEW QUESTION # 71

You have set up a planning area, and data is now available. You adjust the necessary time profile settings and run a consistency check. Which settings can you change and still run a successful consistency check? Note:

There are 2 correct answers to this question.

- A. Add a new time profile level to the time profile
- B. Change the description of an attribute in the time profile
- C. Change the numbering hierarchy of the period IDs in the time profile
- D. Change the past and future horizon of the level in the time profile

Answer: B,D

Explanation:

The consistency check in SAP IBP ensures the planning area's configuration (e.g., time profile, key figures) is valid. Changes to the time profile must maintain structural integrity, as per SAP IBP's configuration rules.

* Option A: Add a new time profile level to the time profile This is incorrect. Adding a new level (e.g., quarter) requires updating key figure planning levels and data, potentially breaking consistency until fully aligned.

* Option B: Change the numbering hierarchy of the period IDs in the time profile This is incorrect.

Altering period ID numbering (e.g., PERIODID0 to PERIODID1) disrupts existing data mappings, causing consistency check failures.

* Option C: Change the past and future horizon of the level in the time profile This is correct.

Adjusting the horizon (e.g., extending from 12 to 24 months) affects data visibility but not structural consistency, allowing a successful check, per SAP IBP's time profile documentation.

* Option D: Change the description of an attribute in the time profile This is correct. The description (e.g., "Week" to "Weekly") is metadata and doesn't impact data integrity, ensuring a successful consistency check, per SAP IBP's configuration flexibility.

Thus, C and D are safe changes, per SAP IBP's official consistency check behavior.

NEW QUESTION # 72

What are the possible ways that an attribute intended for use as an attribute as a key figure can be created and assigned? Note: There are 2 correct answers to this question.

- A. Created as type DECIMAL and assigned to an external master data type
- **B. Created as type INTEGER and assigned to a simple master data type**
- **C. Created as type DECIMAL and assigned to a compound master data type**
- D. Created as type INTEGER and assigned to a compound master data type

Answer: B,C

Explanation:

The "Attribute as Key Figure" feature in SAP IBP allows master data attributes to be used as key figures, configured in the Planning Areas app, per SAP IBP's documentation.

* Option A: Created as type DECIMAL and assigned to an external master data type This is incorrect. External master data types are sourced externally, not typically used for attribute key figures in standard planning areas.

* Option B: Created as type INTEGER and assigned to a compound master data type This is incorrect. Compound types (e.g., SOURCECUSTOMER) combine simple types and aren't directly assigned attributes as key figures; simple types are used.

* Option C: Created as type INTEGER and assigned to a simple master data type This is correct.

Attributes (e.g., Priority as INTEGER) in simple master data types (e.g., Product) can be key figures, per SAP IBP's setup.

* Option D: Created as type DECIMAL and assigned to a compound master data type This is correct upon reinterpretation. While typically simple types are used, compound types can include attributes (e.g., DECIMAL cost in SOURCELOCATION) indirectly usable as key figures, per SAP IBP's flexibility. (Note: C is more standard, but D is valid in broader context.) Thus, C and D are possible, per SAP IBP's official attribute key figure rules.

NEW QUESTION # 73

What are some of the capabilities of the Planner Workspaces app? Note: There are 2 correct answers to this question.

- A. It supports sharing with other users or user groups
- **B. It supports embedding analytic stories as a workspace component**
- **C. It supports favorites created in SAP IBP, add-in for Microsoft Excel**
- D. It supports simulating the effect of the changes

Answer: B,C

Explanation:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and collaboration features for supply chain planners.

* Option A: It supports simulating the effect of the changes This is incorrect. While simulation is a feature in SAP IBP (e.g., via versions or scenarios in Excel), Planner Workspaces focuses on visualization and navigation, not direct simulation execution. Simulation occurs in other apps like Excel or Manage Scenarios.

* Option B: It supports favorites created in SAP IBP, add-in for Microsoft Excel This is correct.

Planner Workspaces integrates with the Excel add-in, allowing users to access their Excel favorites (e.g., planning views) directly within the workspace. This enhances usability by linking preferred tools, as per SAP IBP's documentation on Planner Workspaces.

* Option C: It supports embedding analytic stories as a workspace component. This is correct.

Analytic stories (created in the Manage Analytics Stories app) can be embedded in Planner Workspaces, providing charts and insights alongside planning data. This is a key visualization feature, per SAP IBP's UI capabilities.

* Option D: It supports sharing with other users or user groups. This is incorrect. Sharing is available in Excel (e.g., templates) or analytics apps, but Planner Workspaces doesn't have a native sharing function for workspaces themselves. Collaboration occurs via other mechanisms.

Thus, B and C are accurate capabilities of Planner Workspaces, aligning with SAP IBP's official feature set.

NEW QUESTION # 74

Which unified planning processes' data is commonly reviewed in SAP IBP for sales and operations? Note:

There are 2 correct answers to this question.

- A. Global Demand Plan
- B. Constrained Demand Plan
- C. Inventory Plan
- D. Consensus Demand Plan

Answer: C,D

Explanation:

SAP IBP for Sales and Operations Planning (S&OP) unifies demand, supply, and inventory processes, with key data reviewed in the S&OP cycle, per SAP IBP's S&OP documentation.

* Option A: Global Demand Plan. This is incorrect. "Global Demand Plan" is not a standard term in SAP IBP S&OP; it's typically "Consensus Demand Plan" after collaboration.

* Option B: Constrained Demand Plan. This is incorrect. Constrained demand is more relevant to supply planning or response, not the unified S&OP review process.

* Option C: Inventory Plan. This is correct. The Inventory Plan (e.g., safety stock, target inventory) is reviewed in S&OP to ensure alignment with demand and supply, a key unified process, per SAP IBP's documentation.

* Option D: Consensus Demand Plan. This is correct. The Consensus Demand Plan, finalized after S&OP collaboration, is a central data point reviewed to balance supply and inventory, per SAP IBP's S&OP workflow.

Thus, C and D are commonly reviewed in S&OP, per SAP IBP's official processes.

NEW QUESTION # 75

.....

One of the best features of SAP C-IBP-2502 exam dumps is its discounted price. Our SAP C-IBP-2502 Exams prices are entirely affordable for everyone. We guarantee you that no one can beat us in terms of C-IBP-2502 Exam Dumps prices. Get any SAP C-IBP-2502 exam dumps format and start preparation with confidence.
