The Best Accurate Exam ChromeOS-Administrator Answers - Pass ChromeOS-Administrator Exam

Professional ChromeOS Administrator Exam exam is one of the top-rated Google ChromeOS-Administrator Exams. This Professional ChromeOS Administrator Exam exam offers an industrial-recognized way to validate a candidate's skills and knowledge. Everyone can participate in Professional ChromeOS Administrator Exam exam requirements after completing the Professional ChromeOS Administrator Exam exam. With the Professional ChromeOS Administrator Exam exam you can learn in-demand skills and upgrade your knowledge. You can enhance your salary package and you can get a promotion in your company instantly.

Google Professional ChromeOS Administrator Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

As a ChromeOS Administrator, you have been asked to enroll all of your devices into a specific device OU using Zero-Touch Enrollment (ZTE). What are the next steps?

- A. Generate a ZTE pre-provision enrollment token directly for your domain root OU
- B. Use a dedicated ZTE Admin account for device enrollment
- C. Give the company domain name to your Chrome Partner to enable ZTF
- D. Generate a ZTE pre-provision enrollment token for your specified user OU
- E. Generate a ZTE pre-provision enrollment token for your specified device OU

Answer: C,E

Explanation:

* Generate a ZTE pre-provision enrollment token for your specified device OU: This token associates devices with the specific organizational unit (OU) during enrollment, allowing for easier management and policy application.

* Give the company domain name to your Chrome Partner to enable ZTF: This enables the Zero-Touch Framework, allowing devices to be automatically enrolled as soon as they connect to the internet.

Why other options are incorrect:

* C (Generate token for root OU): While possible, it's not ideal as it doesn't allow for granular control over different device groups.

* D (Generate token for user OU): Zero-Touch Enrollment is specifically for devices, not users.

* E (Use dedicated admin account): While recommended for security, it's not a mandatory step for ZTE.

NEW QUESTION # 24

You have 150 Chrome Enterprise Upgrades (CEU) in your Google Admin console. You decide to purchase 20 Chromebook Enterprise devices (CBE). After enrollment, you would like to identify the type of licenses used by your devices. What should you do?

- A. Check your "Billing subscription" page to identify devices with CBE and CEU
- B. Check directly from the device through the "About Chrome OS" page
- C. Check from the device through chrome://policy
- D. From the "Device information" page, check the "Device Type" attribute content

Answer: D

Explanation:

To distinguish between Chrome Enterprise Upgrades (CEU) and Chromebook Enterprise (CBE) devices, go to the Device information page in the Admin console and check the "Device Type" attribute. This attribute clearly indicates whether the device has a CBE or CEU license.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Licensing Guide, which specifies how to identify device types based on licensing information.

"To check the licensing type, go to the Admin console, navigate to Devices > Chrome > Devices, and check the 'Device Type' attribute on the device information page." This method provides a clear distinction between devices with built-in licenses (CBE) and those upgraded with a separate license (CEU).

Objectives:

* Identify license types for ChromeOS devices.

* Efficiently manage device inventory and licensing.

NEW QUESTION # 25

You are using a third-party service for SSO. Users are confused when signing onto a Chrome device because they are asked for Google account details before being redirected to the sign-in screen for your SSO provider. Which setting must be changed so managed devices open the SSO provider login page by default?

- A. Single sign-on cookie behavior
- B. SAML single sign-on password synchronization flows
- C. SAML single sign-on login frequency
- **D. Single sign-on IdP redirection**

Answer: D

Explanation:

The Single sign-on IdP redirection setting controls whether managed devices directly open the login page of the third-party SSO provider (Identity Provider) or first prompt for Google account credentials. By enabling this setting, you streamline the login process for users and eliminate the confusion caused by the extra Google account prompt.

Option A is incorrect because it controls the frequency of re-authentication for SAML SSO, not the initial login page.

Option B is incorrect because it relates to password synchronization between Google and the IdP, not the login page redirection.

Option C is incorrect because it deals with how cookies are handled for SSO, not the login page redirection.

NEW QUESTION # 26

What are two ways customers can open a support case for ChromeOS? Choose 2 answers

- **A. Contact the device manufacturer**
- B. Send an email to ChromeOS support
- C. File feedback on the device with Alt + Shift + I
- **D. File case through Customer Care Portal**
- E. Chat support via the Admin console

Answer: A,D

Explanation:

* B. Contact the device manufacturer: ChromeOS devices are manufactured by various companies like Acer, HP, Lenovo, etc.

Each manufacturer provides its own support channels, including phone, email, or chat support. Customers can contact the manufacturer for hardware-related issues or specific device configurations.

* D. File a case through the Customer Care Portal: Google provides a customer care portal where customers can submit support cases online. This portal allows users to describe their issues, attach relevant files, and track the progress of their case.

Why other options are incorrect:

* A. Chat support via the Admin console: Chat support is usually available for enterprise customers with Chrome Enterprise Upgrade or Google Workspace, not individual ChromeOS users.

* C. File feedback on the device with Alt + Shift + I: This keyboard shortcut is used to capture screenshots and send feedback to Google, but it doesn't directly open a support case.

* E. Send an email to ChromeOS support: While Google has support channels, sending a general email might not be the most efficient way to open a case and get a timely response.

NEW QUESTION # 27

How should you use Chrome Remote Desktop from the Google Admin console to connect a user?

- A. Open Chrome Remote Desktop and type the device serial number
- B. Open Chrome Remote Desktop and type the user's username
- C. Find the user account and click remote desktop
- **D. Find the device and click remote desktop**

Answer: D

Explanation:

Verified Answer from Official Source:

To access a ChromeOS device remotely, navigate to Devices > Chrome > Devices in the Admin console, find the specific device, and click 'Remote Desktop'." This method helps ensure accurate device management and support without needing personal user credentials or serial numbers.

* Provide remote assistance efficiently.
