Topic 5	Quality Management in Manufacturing: This topic describes the processes related to implementing QM in Manufacturing.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q19-Q24):

NEW QUESTION # 19

Your customer wants to automatically value the overall results of an audit using the standard Which valuation method book scores for the overall result?(2 Correct ans)

- A. Quantitative valuation
- B. Qualitative valuation
- C. Valuation mode
- D. Non relevant indicator

Answer: A,B

NEW QUESTION # 20

What master data can you integrate into a task list for a production order?

- A. MIC
- B. Control Indicator
- C. Classification
- D. Material Specifications

Answer: A

NEW QUESTION # 21

If an inspection characteristic is valued with a rejection, a quality notification should be created automatically. Which settings are required for the inspection characteristic? Note: There are 2 correct answers to this question.

- A. Assignment of an inspection method
- B. Defects recording automatically called up
- C. Assignment of defect codes for rejection
- D. Documentation required if rejected

Answer: B,D

Explanation:

To automatically create a quality notification (e.g., QN01) when an inspection characteristic is rejected in SAP S/4HANA QM, specific settings in the master inspection characteristic (MIC, transaction QS23) are required:

* Defects Recording Automatically Called Up (A): In the MIC's control indicators, the "Defects Recording" checkbox must be activated with the "Automatic" option. This triggers defect recording and, if linked to a notification type in Customizing (SPRO >

QM > Quality Inspection > Defects Recording), creates a notification upon rejection.

* Documentation Required if Rejected (B): Setting "Documentation Required" for rejection ensures that a defect or notification is initiated when the characteristic fails, supporting the automatic process (found in the MIC's "Inspection Characteristic" tab).

* Assignment of Defect Codes for Rejection (C): Defect codes are selected during recording, not pre- assigned in the MIC for automatic notification creation.

* Assignment of an Inspection Method (D): Inspection methods guide execution but don't drive notification automation.

Thus, "Defects recording automatically called up" and "Documentation required if rejected" are the correct answers. References: SAP Help Portal - "Automatic Notification Creation in QM"; SAP S/4HANA QM User Guide - "Defects Recording".

NEW QUESTION # 22

For which catalog types is it mandatory to value the codes in the selected set? Note: There are 2 correct answers to this question.

- A. Characteristic attributes
- B. Defect types
- C. Usage decisions
- D. Activities (QM)

Answer: B,C

Explanation:

In SAP S/4HANA Quality Management, catalogs are used to manage predefined codes for qualitative data recording, and selected sets are subsets of code groups used in specific contexts (e.g., inspection plans).

Valuation of codes (assigning values like "Accepted" or "Rejected") is mandatory for certain catalog types to ensure consistent processing:

* Usage Decisions (A): Catalog type "3" (Usage Decisions) requires valuation in the selected set because the usage decision (UD) determines the stock posting and quality score. In Customizing (SPRO > Quality Management > Quality Inspection > Usage Decision > Define Selected Sets), codes like "A" (Accepted) or "R" (Rejected) must be valued to trigger specific system actions (e.g., goods movement). This is mandatory for inspection lot completion.

* Defect Types (C): Catalog type "9" (Defects) requires valuation in the selected set when used in defect recording (e.g., transaction QS51). Defect codes (e.g., "Scratch," "Dent") need valuation to classify severity or trigger follow-up actions like notifications, making it mandatory in quality processes.

* Characteristic Attributes (B): Catalog type "1" (Characteristic Attributes) is used for qualitative MICs. Valuation is optional and depends on the characteristic's settings (e.g., "Good/Bad"), not mandatory in the selected set itself.

* Activities (QM) (D): Catalog type "5" (Activities) is used for tasks or follow-ups in notifications.

Valuation is not mandatory in the selected set, as activities are typically descriptive rather than evaluative.

Thus, "Usage decisions" and "Defect types" are the correct answers, as valuation is a required step in their respective processes. References: SAP Help Portal - "Catalogs and Selected Sets in QM"; SAP S/4HANA QM Customizing Guide - "Catalog Management".

NEW QUESTION # 23

Where do you define the procedure for calculation of the quality score at usage decision?

- A. Procurement data in the quality management view of the material master
- B. Inspection type settings in the material master
- C. Quality info record: Procurement
- D. Usage decision code

Answer: B

NEW QUESTION # 24
