After you pass the test SCP-NPM certification, your working abilities will be recognized by the society and you will find a good job. If you master our SCP-NPM quiz torrent and pass the exam. You will be respected by your colleagues, your boss, your relatives, your friends and the society. All in all, buying our SCP-NPM Test Prep can not only help you pass the exam but also help realize your dream about your career and your future. So don't be hesitated to buy our SCP-NPM exam materials and take action immediately.

SolarWinds platform is widely recognized as one of the most robust and comprehensive network performance monitoring tools in the market. The SCP-NPM certification exam covers a broad range of topics, including device discovery, network topology mapping, performance metrics, alerting, and reporting. SCP-NPM Exam also tests your ability to configure and customize SolarWinds NPM to meet specific network monitoring requirements.

Hot SCP-NPM Valid Test Testking | Efficient Exam SCP-NPM Bible: SolarWinds Network Performance Monitor (NPM) Exam 100% Pass

We have three versions of SCP-NPM guide materials available on our test platform, including PDF, Software and APP online. The most popular one is PDF version of our SCP-NPM exam questions and you can totally enjoy the convenience of this version, and this is mainly because there is a demo in it, therefore help you choose what kind of SCP-NPM Practice Test are suitable to you and make the right choice. Besides PDF version of SCP-NPM study materials can be printed into papers so that you are able to write some notes or highlight the emphasis.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

You run ten reports on three assorted weekly schedules and send the results to the network operations distribution list. The email address for the distribution list changed, and you must update the new email address to send the reports. How do you implement this update?

- A. Make a copy of each report, edit the action to change the email address
- B. Use the Schedule Manager to edit each action on each report schedule, and change the email address
- C. Edit each action on each report schedule, and change the email address
- D. Use the Action Manager to edit each action on each report schedule, and change the email address

Answer: D

Explanation:

The Action Manager is a feature of the Orion Platform that allows you to create, edit, and delete actions for scheduled reports¹. Actions are the tasks that are performed when a report is generated, such as sending an email, saving a file, or printing a report². You can use the Action Manager to edit the email address for each action on each report schedule, without affecting the report content or schedule³. References: 1: Network Performance Monitor Administrator Guide - Use the Action Manager 2: Network Performance Monitor Administrator Guide - Schedule a report 3: SolarWinds Certified Professional Program - Reporting Exam Study Guide - Use the Action Manager

NEW QUESTION # 68

You have two groups of users - one in Sydney and one in Perth. How do you limit the users within the Orion Platform so they only have access to the devices in their location?

- A. Use the Orion Service Manager to limit user access to nodes only in their location
- B. Configure Network Atlas to show only devices in their geographical location
- C. Configure the Orion Web Console settings to show only devices in the user's geographical location
- D. Group devices into geographical Orion groups and use single group Account limitations to limit user access

Answer: D

Explanation:

According to the SolarWinds NPM Administrator Guide, you can use Orion groups to organize your network objects based on any criteria, such as location, device type, department, etc. You can then apply account limitations based on Orion groups to restrict user access to only the network objects that belong to a specific group. For example, you can create two Orion groups, one for Sydney and one for Perth, and assign the devices in each location to the corresponding group. Then, you can use the single group Account limitation to limit the users in Sydney to only view the Sydney group, and the users in Perth to only view the Perth group. References: SolarWinds NPM Administrator Guide, page 163-165; Limit users to specific network areas in the SolarWinds Platform

NEW QUESTION # 69

You want a user to be able to acknowledge alerts. Which permissions do you assign to the user account?

- A. Allow Account to Clear Events and Acknowledge Alerts and Syslogs
- B. Allow Account to Unmanage Objects
- C. Allow Node Management Rights
- D. Allow Administrator Rights

Answer: A

Explanation:

According to the SolarWinds NPM Administrator Guide, you can assign different permissions to user accounts to control their access and actions in the Orion Platform. One of the permissions is "Allow Account to Clear Events and Acknowledge Alerts and Syslogs", which enables the user to acknowledge alerts, clear events, and mark syslogs as read. This permission is required for a user to be able to acknowledge alerts, as acknowledging an alert stops the escalation process and provides an audit trail. The other permissions listed are not related to alert acknowledgment. "Allow Account to Unmanage Objects" allows the user to temporarily stop monitoring selected network objects. "Allow Node Management Rights" allows the user to add, edit, and delete nodes and interfaces. "Allow Administrator Rights" grants the user full access to all Orion Platform features and settings. Reference: SolarWinds NPM Administrator Guide, page 69-70; Add or remove an alert acknowledgment.

NEW QUESTION # 70

You receive traps from your network devices and want to alert on a select message. How do you accomplish this?

- A. Go to the Traps view and configure a new Log Viewer rule
- B. Configure Syslog alert actions on the Alert Actions tab
- C. You cannot alert on traps through the Orion Platform
- D. Use Traps in Orion Alerts to configure the default trap alert to fire on the trap message you select to alert on

Answer: A

Explanation:

https://documentation.solarwinds.com/en/success_center/orionplatform/content/core-configuring-trap-viewer-filters-and-alerts-sw272.htm https://documentation.solarwinds.com/en/success_center/orionplatform/content/ln/la-orion-log-viewer.htm

NEW QUESTION # 71

You start a new job where NPM is already in use. As soon as you are added to the alert list, you begin receiving "high traffic utilization" alerts from a handful of interfaces.

When you check the alert, the traffic spike has ended. Your new colleagues advise you to ignore these alerts because the spikes rarely last for more than a couple of minutes and are only a concern if they last longer.

How should NPM be modified so you receive fewer false alerts?

- A. Configure the alert so that it triggers only when traffic utilization remains high for a sustained period
- B. Increase the statistics polling frequency on the problematic interfaces
- C. Increase the status polling frequency on the problematic interfaces
- D. Configure the alert so that it resets only when traffic utilization remains high for a sustained period

Answer: A

Explanation:

The best way to reduce false alerts for high traffic utilization is to configure the alert trigger condition to be more specific and accurate. By setting the alert to trigger only when traffic utilization remains high for a sustained period, you can avoid getting alerted for short-lived spikes that are not a cause for concern. You can use the Time of Day and Trigger Condition options in the alert configuration wizard to define the duration and threshold of the high traffic utilization condition. For example, you can set the alert to trigger only when traffic utilization is greater than 80% for more than 10 minutes during business hours. References:
