Supermicro Direct Liquid Cooling Service Associate (SDLCSA) Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

There are 2 slots for the M.2 drive. If only one is installed, it is important to note which slot it is removed from so that it can be re-installed to the same location. True or False.

- A. True
- **B. False**

Answer: B

Explanation:

In Supermicro systems with 2 M.2 slots (e.g., SYS-421GE-TNHR2-LCC), the slots are typically interchangeable unless specified by BIOS or hardware configuration (rare in standard setups). Re-installing an M.2 drive to the same slot isn't critical for functionality, as the system auto-detects it, per Supermicro manuals. False (B) aligns with

DLC system flexibility, making it correct over A. References: Supermicro M.2 installation guides, DLC system storage configs.

NEW QUESTION # 32

When replacing the air shroud onto the motherboard tray, which 2 screws should be placed back first?

- A. The first 2 screws connecting the air shroud to the PCIe tray
- B. The first 2 screws connecting the air shroud to the fan board
- C. The first 2 screws connecting the air shroud to the fan board
- D. The first 2 screws connecting the air shroud to the motherboard tray

Answer: D

Explanation:

Replacing the air shroud onto the motherboard tray in a Supermicro system involves securing it to the tray itself first for stability. The correct screws are those connecting the shroud directly to the motherboard tray, as outlined in Supermicro's assembly guides (e.g., SYS-420 series). These initial screws align and anchor the shroud, ensuring proper fitment before additional connections (if any). Options B (PCIe tray) and C/D (fan board) are incorrect since the shroud's primary attachment is to the motherboard tray, not other components.

In DLC systems, precise shroud placement enhances cooling efficiency, supporting A as the correct choice.

NEW QUESTION # 33

What safety feature prevents the motherboard tray from being removed too quickly and potentially dropped?

- A. A safety latch
- B. A safety pin
- C. A safety switch
- D. A safety cable

Answer: A

Explanation:

In Supermicro servers like the SYS-421GE-TNHR2-LCC, the motherboard tray is a critical component, often heavy with CPUs and DLC cold plates. A safety latch is the standard feature to prevent rapid removal and accidental drops, as seen in manuals (e.g., SYS-420GP-TNAR). Latches on both sides must be released deliberately, ensuring controlled extraction. A cable (A) might tether but not prevent speed, a switch (B) controls electronics, and a pin (D) is less common for trays. Supermicro's DLC systems prioritize safe handling, making C the correct safety mechanism.

NEW QUESTION # 34

How many screws need to be removed in order to release the AOC card from the bracket?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

An AOC (Add-On Card) in Supermicro systems, such as a NIC or GPU card, is secured to its bracket with 1 screw on the metal bar at the top, a standard PCIe card mounting practice (e.g., SYS-420GP-TNAR manuals).

This single screw ensures stability while allowing easy removal, consistent with Supermicro's DLC system serviceability. 4 (A), 2 (B), or 3 (D) screws would be excessive for a single card bracket. Supermicro's modular design in DLC solutions supports C as the verified number. References: Supermicro AOC card installation guides, DLC system component specs.

NEW QUESTION # 35

What is the role of the pump in the D2C liquid-cooled rack?

- A. It circulates the liquid and is placed directly on the chip to improve flow
- B. It turns the liquid into different colors based on the mood of the server
- C. It provides air to cool the server
- D. It boils the liquid and overheats the server

Answer: A

NEW QUESTION # 36
