## Updated TDA-C01 Exam Questions – Key to Your Career Growth

For candidates who are searching for TDA-C01 training materials for the exam, the quality of the TDA-C01 exam dumps must be your first concern. Our TDA-C01 exam materials can reach this requirement. With a professional team to collect the first-hand information of the exam, we can ensure you that the TDA-C01 Exam Dumps you receive are the latest information for the exam. Moreover, we also pass guarantee and money back guarantee, if you fail to pass the exam, we will refund your money, and no other questions will be asked.

To become Tableau TDA-C01 Certified, candidates must pass a rigorous exam that tests their knowledge and skills in using Tableau. TDA-C01 exam consists of multiple-choice questions, hands-on exercises, and scenario-based questions that test a candidate's ability to apply Tableau to real-world business problems. Candidates must score at least 75% to pass the exam and earn their certification.

## Tableau Certified Data Analyst Sample Questions (Q17-Q22):

NEW QUESTION # 17

ID	Full Name	City	Email	Sales
1	John Lee	New York	JLee@example.com	987450 20
2	Jona Mueller	San Diego	JMu@example.com	200980 99

The following is a sample of the sales data for me division in Germany.

You have population data in a file named `Populatio.csv`. the following is a sample of the data.

Use Answer Area arrows to re-order the options)

- 1 - Open Tableau Desktop
- 2 - Create a new column to concatenate the name for the Germany division.
- 3 - Union the sales data of both divisions.
- 4 - Join the sales data and the population data by using City as the join field

### NEW QUESTION # 18

You have the following dataset that contain null values in the Profits field.

Country	Profits
Australia	39,706.36
Canada	
France	46,749.43
Germany	

You want the data to appear as shown in the following table.

Country	Profits
Australia	39,706.36
Canada	0
France	46,749.43
Germany	0

Which two formulas achieve the goal? Choose two.

- A. 2N ([Profits])
- B. IF [Profits] != null then [Profits] END
- C. IFNULL ([profits] ,0)
- D. IFNULL([Profits],0)
- E. ISNULL ([Profits])

**Answer: A,C**

Explanation:

The IFNULL function is a logical function that returns the first argument if it is not null, and the second argument if it is null. In this case, the first argument is [Profits], which is the field that contains null values. The second argument is 0, which is the value that you want to replace null values with. The function will return [Profits] if it is not null, and 0 if it is null.

The IF statement is a logical statement that returns a value or performs an action if a condition is true, and optionally returns another value or performs another action if the condition is false. In this case, the condition is [Profits] != null, which means that [Profits] is not null. The statement will return [Profits] if the condition is true, and nothing if the condition is false. The END keyword marks the end of the statement.

The other options are not correct for this scenario. The ZN function is a logical function that returns zero if a value or expression is null, and returns the value or expression itself if it is not null. However, it only works with numeric values or expressions, and [Profits] may not be numeric in this case. The ISNULL function is a logical function that returns TRUE if a value or expression is null, and FALSE otherwise. It does not replace null values with another value. Reference: [https://help.tableau.com/current/pro/desktop/en-us/functions\\_functions\\_logical.htm#IFNULL](https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#IFNULL) [https://help.tableau.com/current/pro/desktop/en-us/functions\\_functions\\_logical.htm#IF](https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#IF) [https://help.tableau.com/current/pro/desktop/en-us/functions\\_functions\\_logical.htm#ZN](https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#ZN)

[https://help.tableau.com/current/pro/desktop/en-us/functions\\_functions\\_logical.htm#ISNULL](https://help.tableau.com/current/pro/desktop/en-us/functions_functions_logical.htm#ISNULL) Explanation:

The two formulas that will make the data appear as shown in the second table are:

### NEW QUESTION # 19

A Data Analyst has a large data source that contains more than 10 million rows. Users can filter the rows by a field named Animal. The following is a sample of the data.

Animal	Type
Albatross	Mammal
Angelfish	Fish
Ant	Insect
Arctic Wolf	Mammal
Bear	Mammal

The analyst wants to ensure that every calculation is affected by including only animals of a particular type.

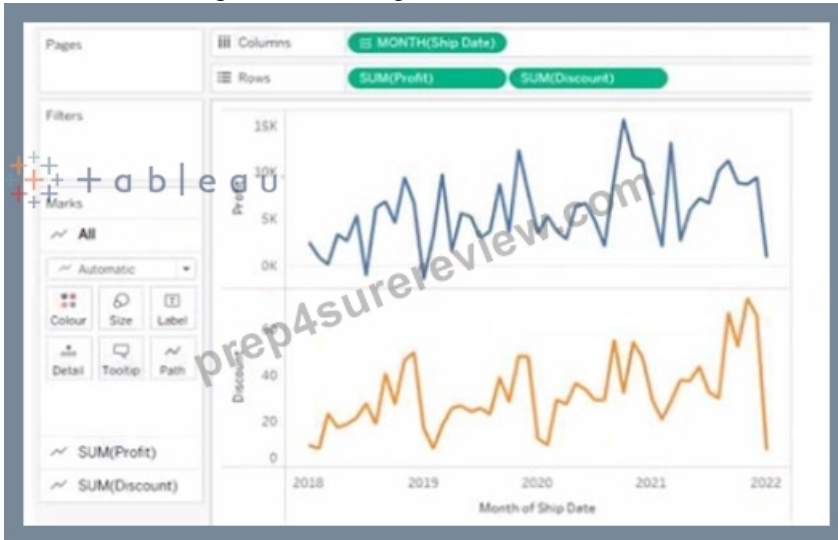

Which type of filter should the analyst create on the worksheet?

- A. Context
- B. Measure
- C. Table calculation
- D. Extract

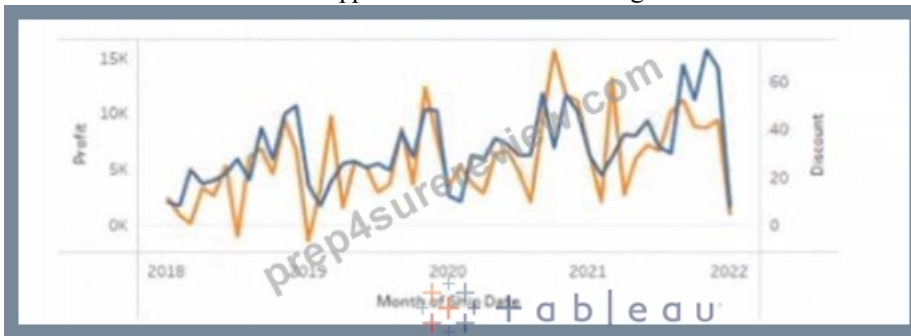

Answer: A

### NEW QUESTION # 20

You have the following chart that shows profits and discounts over time.

You need to combine the lines to appear as shown in the following chart.

What should you do?

- A. Drag Discount to the Columns shelf
- B. Drag Discount to Color on the Marks card
- C. Set Discount to Dual Axis
- D. Convert Discount to Discrete

Answer: C

Explanation:

To combine the lines to appear as shown in the second chart, you should set Discount to Dual Axis. Dual Axis is a feature that allows you to show two measures on two separate axes on one chart. You can create a dual axis by right-clicking on a measure on any shelf and selecting Dual Axis from the menu. This will create two axes on one chart and synchronize their scales.

In this case, you want to show Profit and Discount on two separate axes on one chart. You can right-click on Discount on any shelf and select Dual Axis from the menu. This will create a dual axis chart that shows Profit and Discount as two lines with different colors.

The other options are not correct for this scenario. Dragging Discount to Color on the Marks card will change the color of Profit based on Discount, but it will not show two lines. Converting Discount to Discrete will change Discount from a green pill to a blue pill, but it will not affect how it appears on the chart. Dragging Discount to Columns shelf will create two separate charts for Profit and Discount, but it will not combine them. References: <https://help.tableau.com/current/pro/desktop/en-us/multiplemeasures.htm> [https://help.tableau.com/current/pro/desktop/en-us/multiplemeasures\\_dualaxes.htm](https://help.tableau.com/current/pro/desktop/en-us/multiplemeasures_dualaxes.htm)

### NEW QUESTION # 21

You have the following dashboard that contains two visualizations.

You want to show only visualization at time. Users must be able to switch between visualizations. What should you me?

- A. Showhide buttons
- B. Dashboard actions
- C. Worksheet actions
- D. A parameter and a calculated field

**Answer: D**

Explanation:

Showhide buttons are a feature that allows you to show or hide a layout container on a dashboard. You can use showhide buttons to create a toggle effect that switches between two visualizations. You need to place each visualization in a separate layout container and then add a showhide button for each container. You can customize the appearance and behavior of the buttons to suit your needs. Reference: [https://help.tableau.com/current/pro/desktop/en-us/dashboards\\_organize\\_floating\\_layoutcontainers.htm](https://help.tableau.com/current/pro/desktop/en-us/dashboards_organize_floating_layoutcontainers.htm)
