

2025 Unparalleled Nokia 4A0-D01: New Nokia Data Center Fabric Fundamentals Exam Exam Questions

BTW, DOWNLOAD part of Itcertmaster 4A0-D01 dumps from Cloud Storage: <https://drive.google.com/open?id=15WVG6Opa66wwYkQoovw2MWvdiWlqqeEj>

Through the Nokia Certification 4A0-D01 Exam method has a lot of kinds, spend a lot of time and energy to review the Nokia certification 4A0-D01 exam related professional knowledge is a kind of method, through a small amount of time and money Itcertmaster choose to use the pertinence training and exercises is also a kind of method.

If you have interests with our 4A0-D01 practice materials, we prefer to tell that we have contacted with many former buyers of our 4A0-D01 exam questions and they all talked about the importance of effective 4A0-D01 practice material playing a crucial role in your preparation process. Our practice materials keep exam candidates motivated and efficient with useful content based wholly on the real 4A0-D01 Guide materials.

New Nokia 4A0-D01 Cram Materials & 4A0-D01 Latest Test Report

Now the electronic devices are all around in our life and you can practice the 4A0-D01 exam questions with our APP version. The APP online version of our 4A0-D01 study guide is used and designed based on the web browser. Any equipment can be used if only they boost the browser. It boosts the functions to stimulate the 4A0-D01 Exam, provide the time-limited exam and correct the mistakes online. There is also a function for you to learn our 4A0-D01 exam materials offline after you practice online once. You can decide which version to choose according to your practical situation.

Nokia 4A0-D01 Exam Syllabus Topics:

Topic	Details
Topic 1	Module 5 – EDA (Event Driven Automation) Introduction
Topic 2	Nokia DC Fabric Solution: This section of the exam measures skills of a Data Center Network Engineer and covers the architecture and benefits of modern Layer 3 data center networks. It includes an overview of BGP-based routing, VXLAN and EVPN overlays for multi-tenant environments, and key features of the SR Linux operating system. The section also explains how APIs are used for external configuration and introduces the Fabric Services System's management capabilities.
Topic 3	SR Linux Configuration and Routing: This section of the exam measures skills of a Network Automation Specialist and focuses on configuring and managing SR Linux systems. It examines the YANG-driven CLI, JSON output, environment variables, and static and dynamic routing. Learners also explore BGP, ECMP, IP-VRF, MAC-VRF, and the use of VXLAN with EVPN to implement both Layer 2 and Layer 3 overlays, including symmetric and asymmetric models.

Topic 4	This section of the exam measures skills of a Network Automation Specialist and introduces the principles of Event Driven Automation in SR Linux environments. It covers integration with Kubernetes and explores core use cases such as intent-based automation for fabrics and services, as well as enhanced network observability.
---------	---

Nokia Data Center Fabric Fundamentals Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following is NOT a function of Nokia's SR Linux application manager?

- A. It translates the application's YANG model into protobufs for the IDB.
- B. It manages the SR Linux and customer-defined applications.
- C. It monitors the health of all applications.
- D. It reads the application's configuration information and starts each application.

Answer: A

Explanation:

The SR Linux application manager does not perform the function of translating an application's YANG model into protobufs for the Interface DataBase (IDB). Its primary roles are managing applications, reading their configuration, and monitoring their health.

NEW QUESTION # 34

Which of the following is NOT one of the reasons why BGP is used as the routing protocol in the data center?

- A. It is more efficient than link-state protocols like IS-IS and OSPF.
- B. It is a well understood and mature routing protocol.
- C. It supports both IPv4 and IPv6.
- D. BGP neighbors automatically discover each other.

Answer: A

Explanation:

BGP is not chosen because it is more efficient than link-state protocols; in fact, link-state protocols like IS-IS and OSPF generally provide faster convergence and more efficient route calculation. BGP is used in data centers mainly because it is mature, well understood, supports both IPv4 and IPv6, and offers flexible policy control.

NEW QUESTION # 35

Which of the following statements about a MAC-VRF is FALSE?

- A. Multiple devices can be connected to the same IP subnet using a MAC-VRF.
- B. Packets received in a MAC-VRF are forwarded based on destination IP address.
- C. Bridge table entries contain an exit interface for each destination address.
- D. A MAC-VRF is a Layer 2 network instance.

Answer: B

Explanation:

In a MAC-VRF, packets are forwarded based on Layer 2 information such as destination MAC addresses, not on destination IP addresses.

NEW QUESTION # 36

When autoboot flag is set in grub.cfg, which of the following is NOT performed as part of the Zero Touch Provisioning (ZTP) autoboot process?

- A. Uses the DHCP server to provide the IP address and default gateway
- B. Downloads and executes provisioning scripts
- C. Uses the Web or FTP server to provide the RPM packages and any necessary images
- D. Uses Nokia's Fabric Services System to deploy the digital sandbox automatically

Answer: D

Explanation:

The ZTP autoboot process does not automatically use Nokia's Fabric Services System to deploy the digital sandbox; it focuses on network boot, DHCP IP assignment, and downloading/executing provisioning scripts from web or FTP servers.

NEW QUESTION # 37

Which of the following statements about the data center's leaf-spine topology (clos network) is FALSE?

- A. It uses the spanning tree protocol to avoid forwarding loops.
- B. It uses ECMP to distribute traffic across duplicate links.
- C. Each leaf router is connected to all the spine routers in the cluster.
- D. It provides a consistent path for east-west traffic.

Answer: A

Explanation:

The leaf-spine (Clos) topology does not use the spanning tree protocol because it relies on equal-cost multipath (ECMP) routing to prevent loops and efficiently utilize all available paths. Spanning tree is typically avoided in modern data center fabrics to enable full bandwidth utilization.

NEW QUESTION # 38

.....

If you study with our 4A0-D01 exam questions, then you will be surprised to find that our 4A0-D01 training material is well-written and excellently-organised. That is because our experts fully considered the differences in learning methods and 4A0-D01 examination models between different majors and eventually formed a complete review system. It will help you to Pass 4A0-D01 Exam successfully after a series of exercises, correction of errors, and self-improvement. Our 4A0-D01 exam questions contain everything you need to pass the exam.
