So it is very significant for you to do everything in your power to pass the SSM Exam and get the related certification.

### Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q87-Q92):

#### NEW QUESTION # 87

Which of the following is NOT one of the three "C's" of a story:

- A. Confirmation
- B. Conversation
- C. Card
- D. Collect

**Answer: D**

#### NEW QUESTION # 88

What is the intended value of the Backlog Refinement event?

- A. The team is able to commit to a set of goals to be delivered in the Iteration
- B. The team aligns on the progress of Iteration Goals
- C. The team reviews and improves processes before the next Iteration
- **D. The team is able to prepare requirements for Iteration Planning**

**Answer: D**

Explanation:

The intended value of the Backlog Refinement event is that the team is able to prepare requirements for Iteration Planning. Backlog Refinement is an ongoing process where the team collaborates with the Product Owner and other stakeholders to review, split, prioritize, and estimate the stories in the Team Backlog<sup>1</sup>. One of the main objectives of Backlog Refinement is to ensure that the stories are ready for Iteration Planning, which means they are clear, feasible, testable, and small enough to be completed in a single Iteration<sup>2</sup>. By doing so, the team can improve the quality, efficiency, and effectiveness of their work, as well as deliver value to the customers and the organization<sup>1,2,3</sup>. Reference:

### NEW QUESTION # 89

When is a Feature hypothesis fully evaluated?

- **A. When the Feature has been deployed to production**
- B. When the Feature is accepted by Product Management
- C. When the Feature's return on investment has been realized
- D. When the Customer uses the Feature in production

**Answer: A**

### NEW QUESTION # 90

What is one way the Scrum Master/Team Coach can support the Inspect and Adapt?

- **A. Provide team data**
- B. Supply templates
- C. Host a brainstorm
- D. Create an agenda

**Answer: A**

Explanation:

In SAFe, the Inspect and Adapt (I&A) event provides the Agile Release Train (ART) with a structured opportunity to reflect, measure progress, and identify systemic improvements. The Scrum Master/Team Coach (SM/TC) plays a critical role in supporting this event by ensuring that each team's contribution is backed by meaningful, accurate data.

Providing team data—such as iteration metrics, team velocity, predictability, and performance against objectives—enables evidence-based discussions during the quantitative and qualitative measurement portion of the I&A. This transparency helps identify trends, validate outcomes, and support root cause analysis during the problem-solving workshop.

From SAFe guidance:

"Teams prepare quantitative and qualitative data for the Inspect and Adapt to provide objective insights into their performance and enable continuous improvement discussions." Thus, the correct answer is C. Provide team data, as it directly supports the empirical foundation of the I&A event.

### NEW QUESTION # 91

Some teams break each story into tasks. As the tasks are identified, team members discuss each one: who would be the best person(s) to accomplish it, approximately how long it will take (typically in hours), and any dependencies it may have on other tasks or stories. Is this practice mandated by SAFe?

- **A. no**
- B. yes

**Answer: A**

Explanation:

Explanation/Reference:

While breaking stories into tasks is fairly common, it is **OPTIONAL** and not mandated in SAFe. It is mostly used by beginner teams to learn their velocity and capabilities, and then they become unnecessary, with the team planning only with stories.
