Oracle Cloud Fusion Analytics Warehouse 2023 Implementation Professional Sample Questions (Q32-Q37):

NEW QUESTION # 32
In the FAW Security framework, what purpose do the system groups (like FAW Licensed ERP Authorize and FAW Functional Administrator) help serve?

- A. They giant a user access to FAW based on the system groups to which they are assigned.
- B. Duty and data rotes are mapped to system groups before they are assigned to users.
- C. They define job-specific roles for users.

Answer: A

Explanation:
Explanation
The purpose of the system groups (like FAW Licensed ERP Authors and FAW Functional Administrator) in the FAW Security framework is to grant a user access to FAW based on the system groups to which they are assigned. System groups are predefined groups that specify the user's system permissions, such as whether they can consume, author, or administer content for a specific module5. System groups do not map duty and data roles or define job-specific roles for users.

NEW QUESTION # 33
When choosing a Cloud Account for activating Fusion Analytics Warehouse (FAW), which recommendation does Oracle provide?

- A. No recommendation is provided by Oracle on your choice of Cloud Account for the activation of FAW.
- B. Activate your FAW subscription in a separate Oracle Cloud account. The Oracle Cloud account for your Oracle Fusion Cloud Applications should be exclusively for use by the cloud applications.
- C. Activate FAW subscription into the same Oracle Cloud account as your Oracle Fusion Cloud Applications.

Answer: C

Explanation:
Explanation
The highly recommended best practice is to activate your new UCC subscription into your Oracle Fusion Cloud Applications

account followed by activating your Oracle Fusion Analytics Warehouse subscription into the same Oracle Cloud account as your Oracle Fusion Cloud Applications12

NEW QUESTION # 34

You are implementing Fusion ERP Analytics.
You find two types of predefined Application Roles, e.g., General Ledger Access Set Data security and profitability Analysis Duty Role.
You are implementing Fusion ERP Analytics.
Which type of Application Role is used to secure access to the Subject Area?

- A. Any of the Application Role types can be used to secure access to the Subject Area.
- B. The Data Role secures access to the Subject Area.
- C. The Duty Role secures access to the Subject Area

Answer: B

Explanation:
Explanation
The type of Application Role that is used to secure access to the Subject Area is the Data Role. The Data Role defines the data security context for a user, such as which business units, legal entities, or departments they can access2. The Duty Role defines the functional security for a user, such as which tasks they can perform or which objects they can view3. Any of the Application Role types cannot be used to secure access to the Subject Area, as they have different purposes.

NEW QUESTION # 35

You noticed that the scheduled incremental data refresh has started.
What operations are disabled during the refresh?

- A. FAW subject areas are not accessible.
- B. FAW decks are disabled
- C. Ad hoc data refresh for functional areas are not possible while a scheduled data load is ongoing.

Answer: C

Explanation:
Explanation
The operations that are disabled during the scheduled incremental data refresh are ad hoc data refresh for functional areas and semantic model extensions. You cannot perform an ad hoc data refresh for a functional area while a scheduled data load is ongoing, as this may cause conflicts or errors in the data pipeline3. You also cannot perform semantic model extensions while a scheduled data load is ongoing, as this may cause inconsistencies or corruption in the semantic model1. FAW subject areas and decks are not disabled during the refresh, but they may show outdated or incomplete data until the refresh is completed.

NEW QUESTION # 36

Refreshing the data pipeline for a functional area allows you to bring in incremental data immediately Often, administrators execute this refresh option for ad hoc data uploads.
Are there any issues you must consider while executing the refresh option?

- A. Yes; executing an on-demand data fresh brings in all data from the initial extract date. Since it brings in all data, it takes longer to execute.
- B. Yes; executing an on-demand data refresh while working on the data may cause temporary inconsistencies.
- C. No; executing an on-demand data refresh brings in incremental data. There are no issues/concerns to consider.

Answer: B

Explanation:
Explanation
To perform data validation from the FAW console, you need to ensure that you have the same data security privileges in the FAW instance and the Oracle Transactional Business Intelligence (OTBI) instance. This will allow you to compare the metrics between the two instances and verify their accuracy2. You do not need to have access to all data in the FAW instance or have the administrator

privilege in the OTBI instance to perform data validation.
