NEW QUESTION # 37

What are three reasons that a warning icon might appear in the Security Recommendation window for a password in Passwords settings?

- A. It's a commonly used password or it's easily guessed.
- B. The password appeared in a data leak.
- C. You have multiple or duplicate passwords listed for the website.
- D. The password is reused on another website.
- E. The password hasn't been updated in the last 90 days.

Answer: A,B,D

Explanation:

A warning icon might appear in the Security Recommendation window for a password in Passwords settings if the password meets any of the following criteria:

- * The password is reused on another website. This means that the same password is used for more than one saved password across different domains. This can make the accounts vulnerable to credential-stuffing attacks, where attackers try the same credentials on other services to compromise additional accounts¹.

- * The password appeared in a data leak. This means that the password has been compromised by a data breach and exposed online. This can allow attackers to access the accounts that use the leaked password or try to guess other passwords based on the leaked one¹.

- * It's a commonly used password or it's easily guessed. This means that the password is weak and may be easily cracked by an attacker. This can happen if the password uses words found in a dictionary, common character substitutions, patterns found on a keyboard, or repeated sequences. These patterns are often used to create passwords that satisfy minimum password requirements for services, but are also commonly used by attackers attempting to obtain a password using brute force¹.
