## Exam CTFL4 Price - Pdf CTFL4 Exam Dump

By updating the study system of the CTFL4 study materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the CTFL4 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the CTFL4 exam. More importantly, the updating system of our company is free for all customers.

## BCS ISTQB Certified Tester Foundation Level CTFL 4.0 Sample Questions

## (Q64-Q69):

### NEW QUESTION # 64

For each of the test cases to be executed, the following table specifies the priority order and dependencies on other test cases

bcS Test Case	The Chartered Institute for IT	Priority	Logical Dependencies
TC1		Low	TC5
TC2		High	TC3
TC3		High	TC4
TC4		High	-
TC5		Low	TC2
TC6		Medium	-

Which of the following test execution schedules is compatible with the logical dependencies and allows executing the test cases in priority order?

- A. TC4, TC3, TC2, TC6, TC5, TC1
- B. TC4, TC6, TC3, TC2, TC5, TC1
- C. **TC4, TC3, TC2, TC6, TC1, TC5**
- D. TC3, TC5, TC6, TC1, TC4, TC3

**Answer: C**

Explanation:

This answer is correct because it follows the logical dependencies and allows executing the test cases in priority order. TC4, TC3, and TC2 are executed first because they have the highest priority. TC6 is executed next because it has a logical dependency on TC2. TC1 is executed next because it has a logical dependency on TC5. Finally, TC5 is executed last because it has the lowest priority. ### NEW QUESTION # 65

Which of the following statements about estimation of the test effort is **WRONG**?

- A. **Effort estimate depends on the budget of the project.**
- B. Once the test effort is estimated, resources can be identified and a schedule can be drawn up.
- C. Effort estimate can be inaccurate because the quality of the product under tests is not known.
- D. Experience based estimation is one of the estimation techniques.

**Answer: A**

Explanation:

Effort estimate does not depend on the budget of the project, but rather on the scope, complexity, and quality of the software product and the testing activities<sup>1</sup>. Budget is a constraint that may affect the feasibility and accuracy of the effort estimate, but it is not a factor that determines the effort estimate. Effort estimate is the amount of work required to complete the testing activities, measured in terms of person-hours, person-days, or person-months<sup>2</sup>.

The other options are correct because:

A . Once the test effort is estimated, resources can be identified and a schedule can be drawn up, as they are interrelated aspects of the test planning process<sup>3</sup>. Resources are the people, tools, equipment, and facilities needed to perform the testing activities<sup>4</sup>. Schedule is the time frame and sequence of the testing activities, aligned with the project milestones and deadlines<sup>5</sup>.

B . Effort estimate can be inaccurate because the quality of the product under tests is not known, as it affects the number and severity of the defects that may be found and the rework that may be needed to fix them<sup>6</sup>. Quality is the degree to which the software product satisfies the specified requirements and meets the needs and expectations of the users and clients<sup>7</sup>.

D . Experience based estimation is one of the estimation techniques, which relies on the judgment and expertise of the testers and other project stakeholders to estimate the test effort based on similar projects or tasks done in the past. Experience based estimation

can be useful when there is a lack of historical data, formal methods, or detailed information about the software product and the testing activities.

### NEW QUESTION # 66

You are an experienced tester on a project with incomplete requirements and under pressure to deploy.  
What type of testing should you do?

- A. Checklist-based testing.
- **B. Exploratory testing**
- C. Error guessing.
- D. Decision-based testing.

**Answer: B**

Explanation:

When working on a project with incomplete requirements and under pressure to deploy, exploratory testing is particularly suitable. This type of testing allows testers to use their expertise and intuition to explore the system's functionality and identify defects without needing detailed specifications. Exploratory testing is flexible and can quickly adapt to changes and gaps in the requirements.

### NEW QUESTION # 67

Which ONE of the following options BEST describes black-box test techniques?

- **A. Black-box testing techniques involve analyzing the specified behavior of the test object without knowledge of its internal structure.**
- B. Black-box testing techniques are based on experience with the test object without knowing the internal structure.
- C. Black-box testing techniques are based on analyzing the test object's specified and implied behavior without knowledge of its internal data structure.
- D. In black-box testing techniques, test cases are created based on the software's implementation.

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation: Black-box testing techniques focus on testing the functionality of the software without knowledge of its internal workings (D). They derive test cases from specifications, requirements, or expected behavior. Option A describes exploratory testing, B contradicts the definition by focusing on implementation, and C incorrectly includes "implied behavior," which is not a core characteristic of black-box testing.

### NEW QUESTION # 68

Which of the following best describes the way in which statement coverage is measured?

- A. Measured as the number of decision outcomes executed by the tests, divided by the total number of decision outcomes in the test object.
- B. Measured as the number of lines of code executed by the test, divided by the total number of lines of code in the test object.
- **C. Measured as the number of statements executed by the tests, divided by the total number of executable statements in the code.**
- D. It is not possible to accurately measure statement coverage.

## Answer: C

Explanation:

Statement coverage is a metric used in white-box testing that measures the percentage of executable statements in the code that have been executed by the test cases. It is calculated as the number of statements executed by the tests divided by the total number of executable statements in the code, providing an indication of how much of the code has been tested.

## NEW QUESTION # 69

.....

The content and design of our CTFL4 learning quiz are all perfect and scientific, and you will know it when you use this. Of course, we don't need you to spend a lot of time on our CTFL4 exam questions. As long as you make full use of your own piecemeal time after 20 to 30 hours of study, you can go to the exam.
