Esri Enterprise Administration Professional 2201 Sample Questions (Q60-Q65):

NEW QUESTION # 60
Multiple users report that a map service is experiencing negative performance. Upon review of ArcGIS Monitor data, the GIS analyst finds the following:
* The minimum number of instances is 2 and the maximum is 8 for that service.
* The data is in a publication Enterprise Geodatabase with no system usage in excess of 50%.
* At the p75 level of requests, the map service time is 10 times longer than the service time at the p25 level.
* The number of instances in use at the p50 level is 8.
* The maximum % of physical memory in use is 40%, and the maximum % of virtual memory in use is 44% on the ArcGIS Server.
* The maximum % CPU utilization observed is 53%.
What is causing the issue?

- A. The client is an Android device, and the ArcGIS Server is a Linux virtual machine.
- B. The maximum instance setting is too low for the demand on the underperforming map service.
- C. The network connection between the database server and ArcGIS Server is saturated.

Answer: C

NEW QUESTION # 61
A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it.
Which action should the administrator perform?

- A. Disable the primary administrator account
- B. Use a group-managed service account to administer the server
- C. Configure role-based access through the ArcGIS Server Manager
- D. Define the shared key used to generate an ArcGIS token

Answer: A

Explanation:
The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must be disabled after alternative administrative access has been confirmed.
From ArcGIS Server documentation:
"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."
* Option B relates to token security, not access control.
* Option C is about running the service securely, not defining user permissions.
Reference: ArcGIS Enterprise -Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

NEW QUESTION # 62
A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.
Which action should the administrator perform?

- A. Enable cached drawing mode
- B. Use service defaults for publishing
- C. Adjust pooling to handle the request
- D. Increase the max record count

Answer: D

Explanation:

By default,feature services limit the number of records returned in a single request(usually set to 1,000).

To allow all 2,400 features to be returned in one call, the administrator needs toincrease the "Maximum number of records returned by the server"(maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* OptionA(adjust pooling) relates to concurrency and scalability, not data retrieval limits.

* OptionCwould keep the default setting of 1,000, whichwould not meet the requirement.

* OptionDrelates to visual performance, not record retrieval.

NEW QUESTION # 63

A GIS administrator teammust perform systemmaintenance over the weekend. The teammust ensure that members do not add, publish, or edit any items in ArcGIS Enterprise. Members still need the ability to access and view items as necessary.

Which action should the teamperform?

- A. Place ArcGIS Enterprise in read-only mode
- B. Disable ArcGIS Web Adaptor
- C. Change members' user role to Viewer
- D. Clone the organization's content to a standby deployment

Answer: A

Explanation:

The correct solution is toplace ArcGIS Enterprise in read-only mode. This is an administrative function designed specifically toprevent changes to content or configurationwhile still allowing users toview and access existing items.

From the official ArcGIS Enterprise documentation:

"Read-only mode allows an administrator to restrict changes to the portal. When enabled, no users (including administrators) can create, update, or delete items, groups, or users. However, users can still search for and view items, access content, and use apps and services." This feature is typically used duringmaintenance windowsor before performingdisaster recovery tasksto preserve system state.

* OptionBis incorrect because changing user roles to Viewer wouldnot prevent content changes by administrators or other roleswith publishing privileges.

* OptionCrefers to cloning, which isnot a preventive or temporary access control measure, but rather a method forstandby deployments or replication.

* OptionD(disabling the Web Adaptor) would disrupt access entirely, which doesnot match the requirement to allow viewing.

NEW QUESTION # 64

A new user is added to the organization and can see roads, building footprints, parcels, and traffic data shared with them in Portal for ArcGIS. However, the user cannot use analysis tools in the portal, even though the SpatialAnalysisTools service is verified to be running.

What is causing this issue?

- A. The service needs to be published as a hosted layer
- B. The hosting server has not been configured
- C. The new user is a Creator user type
- D. SpatialAnalysisTools needs to be restarted

Answer: C

NEW QUESTION # 65

......

Are you bothered by looking for good exammaterials of Esri EAEP2201 test? Don't worry. Prep4cram can provide you with everything you need. Should your requirement, Prep4cram find an efficient method to help all candidates to pass EAEP2201 exam.

Most candidates are preparing for IT certification exam while they working, which is a painstaking, laborious process. In order to avoid wasting too much time in preparing for the exam, Prep4cram provides you with Esri EAEP2201 Dumps that can help you pass the test in the short period of time. The dumps contain all problems in the actual test. So, as long as you make use of our dumps, EAEP2201 certificate exam will not a problem.
