## New HPE7-A02 Test Voucher & HPE7-A02 Exam Score

By resorting to our HPE7-A02 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our HPE7-A02 actual tests, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our HPE7-A02 braindump materials. Moreover, there are a series of benefits for you. So the importance of HPE7-A02 actual test is needless to say. If you place your order right now, we will send you the free renewals lasting for one year.

## HP Aruba Certified Network Security Professional Exam Sample Questions (Q70-Q75):

**NEW QUESTION # 70**
HPE Aruba Networking ClearPass Policy Manager (CPPM) uses a service to authenticate clients. You are now adding the Endpoints Repository as an authorization source for the service, and you want to add rules to the service's policies that apply different access levels based, in part, on a client's device category. You need to ensure that CPPM can apply the new correct

access level after discovering new clients' categories.
What should you enable on the service?

- A. The Audit End-host option in the Service tab
- B. The Posture Compliance option in the Service tab
- C. The Use cached Roles and Posture attributes from previous sessions option in the Enforcement tab
- D. The Profile Endpoints option in the Service tab

**Answer: D**

Explanation:
To ensure that HPE Aruba Networking ClearPass Policy Manager (CPPM) can apply the correct access levels based on a client's device category after discovering new clients, you need to enable the "Profile Endpoints" option in the Service tab. This option allows CPPM to profile and categorize endpoints dynamically, ensuring that the appropriate access levels are applied based on the device's characteristics.
Enabling this feature ensures that new devices are accurately profiled and that access policies can be enforced based on the updated device information.

**NEW QUESTION # 71**
A company has HPE Aruba Networking Central-managed APs. The company wants to block all clients connected through the APs from using YouTube.
Which steps should you take?

- A. Deploy gateways and have the APs tunnel traffic to the gateways. Then, enable the gateway IDS/IPS engine.
- B. Enable DPI. Then, create application rules to deny YouTube on the firewall roles.
- C. Enable Client IPS at the "custom" level, and then specify the check for YouTube.
- D. Enable WebCC on all client firewall roles. Then, create WebCC category rules that deny suspicious URLs.

**Answer: B**

Explanation:
To block all clients connected through HPE Aruba Networking Central-managed APs from accessing YouTube, you should enable DPI (Deep Packet Inspection) and then create application rules to deny YouTube on the firewall roles. DPI allows the network to inspect and classify traffic based on application signatures, making it possible to enforce application-specific policies. By creating rules that specifically block YouTube traffic, you can effectively prevent clients from accessing the service.

**NEW QUESTION # 72**
A company is implementing HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on its AOS-10 APs, which are managed in HPE Aruba Networking Central.
What is one requirement for enabling detection of rogue APs?

- A. A manual radio profile that enables non-regulatory channels
- B. Each VLAN in the network assigned on at least one AP's or AM's port
- C. A Foundation with Security license for each of the APs
- D. One AM deployed for every one AP deployed

**Answer: C**

Explanation:
To enable the detection of rogue APs with HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on AOS-
10 APs managed in HPE Aruba Networking Central, each AP must have a Foundation with Security license.
This license enables advanced security features, including rogue AP detection, which is crucial for maintaining a secure wireless environment and protecting against unauthorized access points.

**NEW QUESTION # 73**
A company is using HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application).
In the CPDI security settings, Security Analysis is On,
the Data Source is ClearPass Devices Insight, and Enable Posture Assessment is On. You see that device has a Risk Score of 90.

What can you know from this information?

- A. The posture is unknown, and CPDI has detected exactly four vulnerabilities on the device.
- B. The posture is unhealthy, but CPDI has not detected any vulnerabilities on the device.
- C. The posture is unhealthy, and CPDI has also detected at least one vulnerability on the device.
- D. The posture is healthy, but CPDI has detected multiple vulnerabilities on the device.

**Answer: C**

Explanation:
In HPE Aruba Networking ClearPass Device Insight (CPDI), a device with a Risk Score of 90 indicates that the posture is unhealthy, and CPDI has detected at least one vulnerability on the device. The risk score is a reflection of the device's security posture and detected vulnerabilities. A high risk score, such as 90, typically signifies significant security concerns, including the presence of vulnerabilities that could be exploited, thereby categorizing the device as a high-risk asset within the network.

**NEW QUESTION # 74**

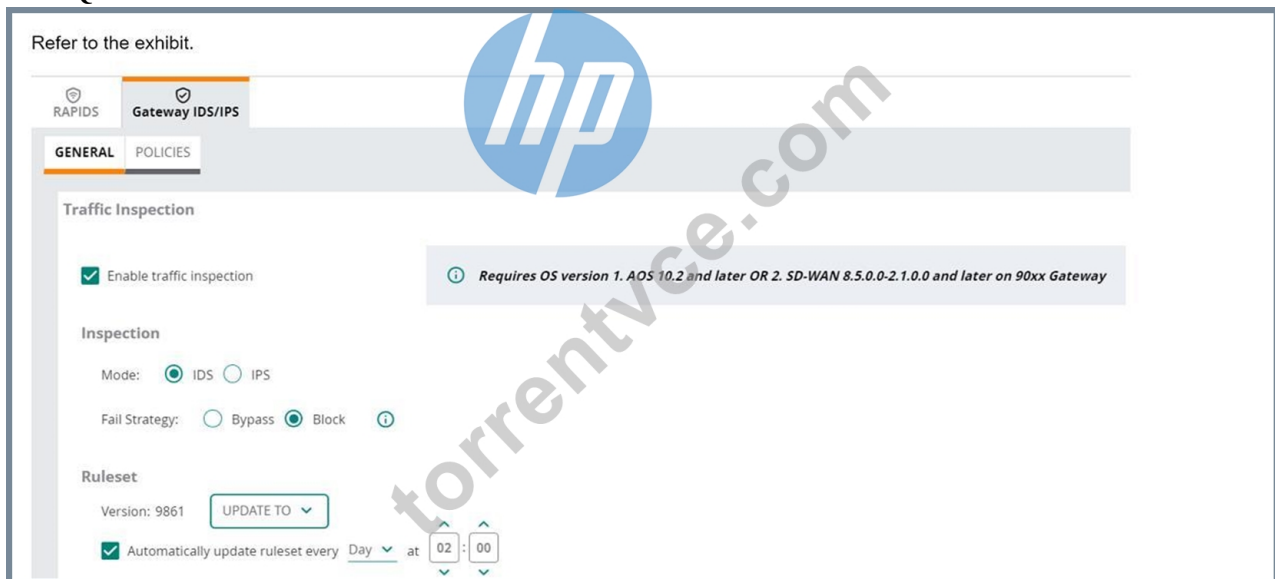

(Note that the HPE Aruba Networking Central interface shown here might look slightly different from what you see in your HPE Aruba Networking Central interface as versions change; however, similar concepts continue to apply.) An HPE Aruba Networking 9x00 gateway is part of an HPE Aruba Networking Central group that has the settings shown in the exhibit. What would cause the gateway to drop traffic as part of its IDPS settings?

- A. Its site-to-site VPN connections failing
- B. Traffic matching a rule in the active ruleset
- C. Its IDPS engine failing
- D. Traffic showing anomalous behavior

**Answer: B**

Explanation:
In the exhibit, the HPE Aruba Networking Central settings for the 9x00 gateway show that traffic inspection is enabled, and the gateway is set to operate in IDS (Intrusion Detection System) mode with the fail strategy set to "Block". This configuration means that the gateway will drop traffic if it matches a rule in the active ruleset.
1. Active Ruleset: The ruleset version 9861 is active, and the gateway is configured to automatically update the ruleset daily.
2. Traffic Matching Rules: When traffic matches a rule in the active ruleset, it is flagged as suspicious or malicious.
3. Block Mode: Since the fail strategy is set to "Block", any traffic that matches a rule in the active ruleset will be dropped to prevent potential threats.

**NEW QUESTION # 75**
......

If you don't have enough time to study for your HP Aruba Certified Network Security Professional Exam exam, TorrentVCE

provides HP HPE7-A02 Pdf questions. You may quickly download HP HPE7-A02 exam questions in PDF format on your smartphone, tablet, or desktop.
