12	1.443653	ASUSTekC_37:42:e3	ArubaHe_e2:d7:00	802.11	36	Action No Ack, SN=658, FN=0, Flags=o...R...

You have downloaded a packet capture that you generated on HPE Aruba Networking Central. When you open the capture in Wireshark, you see the output shown in the exhibit.

What should you do in Wireshark so that you can better interpret the packets?

- A. Choose to decode UDP port 5555 packets as ARUBA\_ERM and set the Aruba ERM Type to 0.
- B. Edit the Enabled Protocols and make sure that 802.11, GRE, and Aruba\_ERM are enabled.
- C. Apply the following display filter: wlan.fc.type == 1.
- D. Edit preferences for IEEE 802.11 and chose to ignore the Protection bit with IV.

**Answer: A**

Explanation:

To better interpret the packets shown in the Wireshark capture, you should choose to decode UDP port 5555 packets as ARUBA\_ERM and set the Aruba ERM Type to 0. This configuration will allow Wireshark to properly decode and display the Aruba-specific encapsulated remote mirroring (ERM) packets, providing a clearer understanding of the traffic.

1. Decoding Protocols: Selecting the correct protocol decoding in Wireshark ensures that the captured packets are interpreted correctly, displaying the relevant information.

2. Aruba ERM: The packets in the capture are likely encapsulated remote mirroring (ERM) packets specific to Aruba, which require proper decoding settings in Wireshark.

3. Clear Interpretation: By setting the Aruba ERM Type to 0 and decoding the packets as ARUBA\_ERM, you can view the encapsulated data accurately.

Reference: Wireshark documentation and Aruba network packet analysis guides provide instructions on setting protocol decoding options to accurately interpret specific types of network traffic, such as Aruba ERM packets.

### NEW QUESTION # 13

You are helping an organization deploy HPE Aruba Networking SSE. What is one reason to recommend that the company install agents on remote users' devices?

- A. To permit users to access private servers using SSH.
- B. To permit admins to manage the HPE Aruba Networking SSE policy rules.
- C. To run threat inspection on clients in a local sandbox rather than in the cloud.
- D. To run posture checks and apply different permissions based on those checks.

**Answer: D**

Explanation:

\* Installing Agents for SSE (Secure Service Edge):

\* Agents installed on remote users' devices allow posture checks (e.g., antivirus status, OS version) to ensure compliance.

\* Based on the results of the posture checks, different permissions and security policies can be applied dynamically.

\* This improves the security posture of remote users before granting access to resources.

\* Option A: Correct. Agents enable posture checks and enforce conditional access based on compliance.

\* Option B: Incorrect. Admins manage SSE policies centrally, not via agents.

\* Option C: Incorrect. Access to private servers via SSH does not require agents; it relies on policies and tunnels.

\* Option D: Incorrect. Local sandboxing is generally a function of endpoint protection solutions, not SSE agents.

### NEW QUESTION # 14

A company uses HPE Aruba Networking ClearPass Device Insight (CPDI) (the standalone application option). In the details for a generic device cluster, you see a recommendation for "Windows 8/10" with 70% accuracy. What does this mean?

- A. CPDI has matched these devices against several, conflicting system rules. 70% of those rules are for "Windows 8/10" devices.
- B. CPDI has detected that these devices match about 70% of the system rule for defining "Windows 8/10" devices.
- C. CPDI has grouped this cluster with similar classified devices. 70% of those classified devices are "Windows 8/10."
- D. CPDI has used MAC OUI to group these devices together. The average device's MAC address matches 70% of the "Windows 8/10" OUI.

**Answer: B**

Explanation:

When HPE Aruba Networking ClearPass Device Insight (CPDI) shows a recommendation for "Windows 8/10" with 70% accuracy for a generic device cluster, it means that CPDI has detected that these devices match about 70% of the system rule criteria for defining "Windows 8/10" devices. This percentage indicates the confidence level based on the observed characteristics and behavior of the devices, helping administrators understand the likelihood that these devices are indeed running Windows 8 or 10.

### NEW QUESTION # 15

What is a benefit of Online Certificate Status Protocol (OCSP)?

- A. It lets a device download all the serial numbers for certificates revoked by a CA at once.
- B. It lets a device query whether a single certificate is revoked or not.
- C. It lets a device determine whether to trust a certificate without needing any root certificates installed.
- D. It lets a device dynamically renew its certificate before the certificate expires.

**Answer: B**

Explanation:

\* OCSP (Online Certificate Status Protocol):

\* OCSP allows a device to check the revocation status of a specific certificate in real-time by querying the Certificate Authority (CA).

\* This is more efficient than downloading an entire Certificate Revocation List (CRL), as it only checks the status of one certificate.

\* Option Analysis:

- \* Option A: Incorrect. Root certificates are still required to validate the CA issuing the certificate.
- \* Option B: Correct. OCSP checks the status of a single certificate for revocation.
- \* Option C: Incorrect. Downloading all serial numbers is a function of a CRL, not OCSP.
- \* Option D: Incorrect. OCSP does not handle certificate renewal; it only checks for revocation.

### NEW QUESTION # 16

What correctly describes an HPE Aruba Networking AP's Device (TPM) certificate?

- A. It is signed by an HPE Aruba Networking CA and is trusted by many HPE Aruba Networking solutions.
- B. It is installed on APs after they connect to and are provisioned by HPE Aruba Networking Central.
- C. It is a self-signed certificate that should not be used in production.
- D. It works well as a captive portal certificate for guest SSIDs.

**Answer: A**

Explanation:

An HPE Aruba Networking AP's Device (TPM) certificate is signed by an HPE Aruba Networking Certificate Authority (CA) and is trusted by many HPE Aruba Networking solutions. This certificate is used for secure communications and device authentication within the Aruba network ecosystem.

1. CA-Signed Certificate: The Device (TPM) certificate is signed by a trusted Aruba CA, ensuring its authenticity and integrity.

2. Trust Across Solutions: Because it is signed by an Aruba CA, it is recognized and trusted by various Aruba solutions, facilitating secure interactions and communications.

3.Security: Using a CA-signed certificate enhances the security of the network by preventing unauthorized access and ensuring that communications are secure.

## NEW QUESTION # 17

.....

As we all know, it is not easy to get promotion. For the first thing, you must be good at finishing your work excellently. At the same time, you must accumulate much experience and knowledge. If you urgently want to stand out in your company, our HPE7-A02 exam guide can help you realize your aims in the shortest time. For not only that our HPE7-A02 Study Materials can help you know more knowledge on the subject and our HPE7-A02 practice engine can help you get your according certification.

**New HPE7-A02 Test Topics:** <https://www.itpass4sure.com/HPE7-A02-practice-exam.html>

Therefore, our customers can save their limited time and energy to stay focused on their study as we are in charge of the updating of our HPE7-A02 test training, HP HPE7-A02 Test Questions Answers Third, it is convenient, HP HPE7-A02 Test Questions Answers The society changes quickly, so we can't be passively, Furthermore, our experts of HP HPE7-A02 dumps torrent, with rich experience and profound knowledge, offer you the opportunity to leave messages for your questions so that they can help you study better.
