Salesforce Order-Management-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.
Topic 2	<ul style="list-style-type: none">Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.
Topic 3	<ul style="list-style-type: none">Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.
Topic 4	<ul style="list-style-type: none">User Experience and Customization: This section emphasizes leveraging Salesforce's Lightning UI to enhance user experiences. The Salesforce Order Management Administrator Consultant will customize experiences for users and managers through tools like the Lightning Page Editor, Report Builder, and out-of-the-box components. Success in this area ensures optimized workflows and improved operational efficiency.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which two practices are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects?

- A. The names must be an exact match
- B. The types must be an exact match (i.e. String to String)
- C. The names must only contain letters and underscores
- D. The types must match within reason

Answer: A,D

Explanation:

Two practices that are needed for a custom attribute to map into Order Management assuming the attribute has been created on the necessary objects are: The types must match within reason. The data type of the custom attribute in Order Management must match or be compatible with the data type of the corresponding attribute in the external system, such as B2C Commerce or B2B Commerce. For example, if the attribute is a string in B2C Commerce, it must also be a string in Order Management.

The names must be an exact match. The name of the custom attribute in Order Management must be exactly the same as the name of the corresponding attribute in the external system, including capitalization and punctuation. For example, if the attribute is named "kitItem" in B2C Commerce, it must also be named "kitItem" in Order Management.

NEW QUESTION # 39

An administrator suspects that recent changes to a flow have created a defect. The administrator wants to test the flow with input data that they believe will cause the error. What can the developer do next?

- A. Open the Flow, Select Debug with inputs. Provide the input values, select Run
- B. Open the Flow, Select Debug. Provide the input values, Select Run
- C. Open the Flow and select Attach to Live Session and Provide the Order Number
- D. Open the Flow and select Attach to Live Session. Provide the Session Id. Select Attach

Answer: A

Explanation:

Explanation

Debugging a flow with input data allows the administrator to test the flow with specific values and see how the flow behaves. The Debug with inputs option is available in the Flow Builder toolbar and lets the administrator provide input values for each flow variable before running the flow. Verified References:

NEW QUESTION # 40

How can an administrator add visibility rules for the buttons in the Highlights Panel on the Order Summary record page?

- A. Create a custom Highlights Panel component
- B. **Modify the Lightning Record Page Highlights Panel using Dynamic Actions**
- C. Modify the visibility rules of the Highlights Panel Actions in the page layout
- D. Navigate to the Order Summary object in Setup and modify the Highlights Panel visibility rules

Answer: B

Explanation:

Dynamic Actions allow an administrator to add visibility rules for the buttons in the Highlights Panel on the Lightning Record Page. Dynamic Actions let you configure when and where actions appear on a record page based on criteria such as record field values, user permissions, or device type.

NEW QUESTION # 41

What does a summary object represent?

- A. A discount to underlying data
- B. A change to an underlying record.
- C. **A dynamic view of underlying data**
- D. An individual change to financial data

Answer: C

Explanation:

Explanation

A summary object represents a dynamic view of underlying data. A summary object is a type of object that aggregates data from related records and displays it in a single record. For example, an Order Summary object represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary object aggregates data from related Order Item Summary records and displays it in fields such as total amount, tax amount, discount amount, etc. Verified References:https://help.salesforce.com/s/articleView?id=sf.order_management_order_summary.htm&type=5

NEW QUESTION # 42

Which three statements are true about change sets?

- A. **Sending a change set between two orgs requires a deployment connection**
- B. **Change sets can contain only modifications made through the Setup menu**
- C. A change request should be created when the admin wants to send customizations from the current org to another org
- D. **Change sets can only be sent between orgs that are affiliated with a production org**
- E. Changes can be deployed to any instance of Salesforce as long as the destination has approved it

Answer: A,B,D

Explanation:

Three statements that are true about change sets are:

Sending a change set between two orgs requires a deployment connection. A deployment connection is a link between two orgs that allows one org to send change sets to another org.

Change sets can only be sent between orgs that are affiliated with a production org. A production org is an org that is used for live operations and data, and it can have one or more sandbox orgs that are used for development and testing. Change sets can only be sent from a sandbox org to its associated production org, or from one sandbox org to another sandbox org that shares the same production org.

Change sets can contain only modifications made through the Setup menu. A change set is a collection of metadata components that can be deployed from one org to another. Metadata components are customizations that are made through the Setup menu, such as custom objects, fields, workflows, etc.
