Salesforce Certified Nonprofit Cloud Consultant Exam certification exam consists of 60 multiple-choice questions, which must be completed within 105 minutes. Candidates must score at least 68% to pass the exam and earn their certification.

Salesforce Certified Nonprofit Cloud Consultant Exam Sample Questions (Q15-Q20):

NEW QUESTION # 15

The VP of Development wants to track the nonprofit organization's six campaigns nested within each other: Friends of the Organization>FY19>Capital Campaign>Annual Fund>Digital Donations>Mobile. What should the consultant do?

- A. Suggest changing the order of the hierarchy.
- B. Create a custom lookup field, "Related Campaign" on the Campaign object.
- C. Suggest consolidating at least one of the Campaigns so that it is within the Campaign Hierarchy limit.
- **D. Create a Campaign Hierarchy with the parent Campaign record as, "Friends of the Organization"**

Answer: D

Explanation:

To track nested campaigns effectively, Salesforce Campaign Hierarchies can be utilized. Here are the steps to set this up:

- * Create Parent Campaign:
- * Create the top-level parent Campaign called "Friends of the Organization".
- * Create Sub-Campaigns:
- * Create sub-campaigns under the parent campaign for each hierarchical level: FY19, Capital Campaign, Annual Fund, Digital Donations, and Mobile.
- * Link each sub-campaign to its parent campaign using the Parent Campaign lookup field.
- * Configure Campaign Hierarchy Settings:
- * Ensure the Campaign Hierarchy settings are configured to allow for the desired depth of nested campaigns.
- * Track Campaign Performance:
- * Use Campaign Hierarchy reports to track the performance of each campaign within the hierarchy.
- * Analyze metrics such as total donations, engagement, and conversion rates at each level.

By creating a structured Campaign Hierarchy, the nonprofit can effectively track and manage complex campaign structures, gaining insights into performance at each level of the hierarchy.

"Campaign Hierarchies" from Salesforce Help: Campaign Hierarchies

"Managing Campaigns in NPSP" from Salesforce.org: Campaign Management

NEW QUESTION # 16

A nonprofit organization has a lot of donors who give recurring donations. Some donors like to have their recurring donations by three times per year. What should the consultant advise?

- **A. Create a custom installment period in NPSP Settings, and then add the tri-yearly custom installment period to the custom installment picklist.**
- B. Tri-yearly is not available as an option in Recurring Donations so for those the nonprofit will need to use Opportunities with multiple payments.
- C. Change one of the values on the custom installment picklist to tri-yearly.
- D. Use the tri-yearly installment period that comes by default with Recurring Donations.

Answer: A

Explanation:

For donors who prefer to have their recurring donations three times per year, follow these steps to create a custom installment

period in NPSP:

Navigate to NPSP Settings:

Go to the App Launcher and search for "NPSP Settings".

Access Recurring Donations Settings:

In NPSP Settings, click on "Donations".

Select "Recurring Donations".

Create a Custom Installment Period:

Click on "Custom Installments".

Add a new custom installment period named "Tri-Yearly" or any other preferred name.

Define the specific details for this installment period, such as frequency and dates.

Add to Installment Picklist:

Ensure the new custom installment period is added to the Recurring Donation installment picklist.

Update existing recurring donations as needed to use the new installment period.

This customization allows the organization to accommodate donors who prefer tri-yearly installments.

NEW QUESTION # 17

A nonprofit using NPSP wants to track all donations that go to a designated fund.

How should a consultant meet this requirement?

- A. Create a custom object to track fund accounts.
- B. Create a General Accounting Unit record for the designated fund.
- C. Create an Opportunity record type called "Funds".
- **D. Create a GAU Allocation record for the designated fund.**

Answer: D

Explanation:

To track all donations that go to a designated fund, the consultant should create a GAU Allocation record for the designated fund.

Here's why:

* GAU Allocation Record:

* General Accounting Units (GAUs) are used in NPSP to allocate portions of donations to specific funds or purposes.

* Creating a GAU Allocation record allows the nonprofit to specify the amount of each donation that should be allocated to the designated fund, ensuring accurate tracking and reporting.

NEW QUESTION # 18

A consultant is helping a nonprofit diagnose and address some issues they have with NPSP. The consultant sees the customer is hitting governor limit errors on a particular job. Which action should the consultant take to resolve the issue?

- **A. Decrease the batch size for that job.**
- B. Increase the batch size for that job.
- C. Reschedule that nightly job.
- D. Schedule that job to run more frequently.

Answer: A

Explanation:

Salesforce operates in a multi-tenant environment, which means all organizations share the same underlying computing resources. To prevent one organization's code from hogging all the power, Salesforce enforces Governor Limits (e.g., limits on CPU time, memory, or the number of database queries).

When a "Batch Job" (such as NPSP's nightly rollup calculation) hits a governor limit, it usually means the system is trying to process too much data at once within a single transaction "chunk." The Solution: Decreasing Batch Size:

* How it Works: In NPSP, batch jobs are broken into segments. If the batch size is set to 200 (the default), the system tries to process 200 records at a time. If the 200 records are complex (e.g., they have dozens of triggers, flows, and related records), the system may run out of memory or time.

* The Fix: By decreasing the batch size (e.g., from 200 down to 50 or 25), the consultant reduces the workload of each individual transaction. While the overall job might take longer to complete, each "chunk" is more likely to stay within the allowed governor limits.

* Implementation: The consultant can adjust these settings in NPSP Settings > Bulk Data Processes > Batch Control, or by updating the specific batch size in the Apex code or job configuration.

Why other options are incorrect:

* Increasing Batch Size (Option A): This would worsen the problem by putting more strain on each transaction.

* Rescheduling (Option B & C): Changing when the job runs does not change how much data is processed per chunk, so it will still hit the same technical limits.

NEW QUESTION # 19

A nonprofit is rolling out a new implementation of Salesforce and NPSP containing custom code. The project go-live date is a few days before a Salesforce release. The project team has proposed developing in a sandbox on a preview instance to review new features and then deploy to production prior to the release date.

Which important consideration should the consultant discuss with the project team?

- A. A preview sandbox is only available in the Unlimited Edition.
- B. A support case is required to request a preview sandbox.
- C. The API version in the preview sandbox differs from Production.
- D. A preview sandbox has limited metadata storage.

Answer: C
