212-82 Latest Test Materials & 212-82 Test Passing Score

With the ECCouncil 212-82 certification exam you can do your job nicely and quickly. You should keep in mind that the ECCouncil 212-82 certification exam is a valuable credential and will play an important role in your career advancement. With the right ECCouncil 212-82 Exam Preparation, commitment and dedication you can make this challenge easy and quick.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q137-Q142):

NEW QUESTION # 137

Kasen, a cybersecurity specialist at an organization, was working with the business continuity and disaster recovery team. The team initiated various business continuity and discovery activities in the organization. In this process, Kasen established a program to restore both the disaster site and the damaged materials to the pre-disaster levels during an incident.

Which of the following business continuity and disaster recovery activities did Kasen perform in the above scenario?

- A. Prevention
- B. Recovery
- C. Response
- D. Resumption

Answer: B

Explanation:

Recovery is the business continuity and disaster recovery activity that Kasen performed in the above scenario.

Business continuity and disaster recovery (BCDR) is a process that involves planning, preparing, and implementing various activities to ensure the continuity of critical business functions and the recovery of essential resources in the event of a disaster or disruption.

BCDR activities can be categorized into four phases:

prevention, response, resumption, and recovery . Prevention is the BCDR phase that involves identifying and mitigating potential risks and threats that can cause a disaster or disruption. Response is the BCDR phase that involves activating the BCDR plan and executing the immediate actions to protect people, assets, and operations during a disaster or disruption. Resumption is the BCDR phase that involves restoring the minimum level of services and functions required to resume normal business operations after a disaster or disruption.

Recovery is the BCDR phase that involves restoring both the disaster site and the damaged materials to the pre-disaster levels during an incident.

NEW QUESTION # 138

A threat intelligence feed data file has been acquired and stored in the Documents folder of Attacker Machine-1 (File Name: Threatfeed.txt). You are a cybersecurity technician working for an ABC organization. Your organization has assigned you a task to analyze the data and submit a report on the threat landscape. Select the IP address linked with <http://securityabc.s21sec.com>.

- A. 5.9.200.150
- B. 5.9.200.200
- **C. 5.9.188.148**
- D. 5.9.110.120

Answer: C

Explanation:

5.9.188.148 is the IP address linked with <http://securityabc.s21sec.com> in the above scenario. A threat intelligence feed is a source of data that provides information about current or potential threats and attacks that can affect an organization's network or system. A threat intelligence feed can include indicators of compromise (IoCs), such as IP addresses, domain names, URLs, hashes, etc., that can be used to detect or prevent malicious activities. To analyze the threat intelligence feed data file and determine the IP address linked with <http://securityabc.s21sec.com>, one has to follow these steps:

Navigate to the Documents folder of Attacker-1 machine.

Open Threatfeed.txt file with a text editor.

Search for <http://securityabc.s21sec.com> in the file.

Observe the IP address associated with the URL.

The IP address associated with the URL is 5.9.188.148, which is the IP address linked with <http://securityabc.s21sec.com>.

NEW QUESTION # 139

An attacker with malicious intent used SYN flooding technique to disrupt the network and gain advantage over the network to bypass the Firewall. You are working with a security architect to design security standards and plan for your organization. The network traffic was captured by the SOC team and was provided to you to perform a detailed analysis. Study the Synflood.pcapng file and determine the source IP address.

Note: Synflood.pcapng file is present in the Documents folder of Attacker-1 machine.

- A. 20.20.10.60
- **B. 20.20.10.19**
- C. 20.20.10.59
- D. 20.20.10.180

Answer: B

Explanation:

20.20.10.19 is the source IP address of the SYN flooding attack in the above scenario. SYN flooding is a type of denial-of-service (DoS) attack that exploits the TCP (Transmission Control Protocol) three-way handshake process to disrupt the network and gain advantage over the network to bypass the firewall. SYN flooding sends a large number of SYN packets with spoofed source IP addresses to a target server, causing it to allocate resources and wait for the corresponding ACK packets that never arrive. This exhausts the server's resources and prevents it from accepting legitimate requests . To determine the source IP address of the SYN flooding attack, one has to follow these steps:

Navigate to the Documents folder of Attacker-1 machine.

Double-click on Synflood.pcapng file to open it with Wireshark.

Click on Statistics menu and select Conversations option.

Click on TCP tab and sort the list by Bytes column in descending order.

Observe the IP address that has sent the most bytes to 20.20.10.26 (target server).

The IP address that has sent the most bytes to 20.20.10.26 is 20.20.10.19 , which is the source IP address of the SYN flooding attack.

NEW QUESTION # 140

Andre, a security professional, was tasked with segregating the employees' names, phone numbers, and credit card numbers before sharing the database with clients. For this purpose, he implemented a deidentification technique that can replace the critical information in database fields with special characters such as asterisks (*) and hashes (#).

Which of the following techniques was employed by Andre in the above scenario?

- A. Hashing
- B. Masking
- C. Tokenization
- D. Bucketing

Answer: B

NEW QUESTION # 141

Kayden successfully cracked the final round of interview at an organization. After few days, he received his offer letter through an official company email address. The email stated that the selected candidate should respond within a specified time. Kayden accepted the opportunity and provided e-signature on the offer letter, then replied to the same email address. The company validated the e-signature and added his details to their database. Here, Kayden could not deny company's message, and company could not deny Kayden's signature.

Which of the following information security elements was described in the above scenario?

- A. Integrity
- B. Confidentiality
- C. Availability
- D. Non-repudiation

Answer: D

NEW QUESTION # 142

.....

With our excellent 212-82 exam questions, you can get the best chance to obtain the 212-82 certification to improve yourself, for better you and the better future. With our 212-82 training guide, you are acknowledged in your profession. The 212-82 exam braindumps can prove your ability to let more big company to attention you. Then you have more choice to get a better job and going to suitable workplace. Why not have a try on our 212-82 Exam Questions, you will be pleasantly surprised our 212-82 exam questions are the best preparation material.
