

Valid NCP-MCI-7.5 Test Questions Answers Offers Candidates Latest-updated Actual Nutanix Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Exam Products

Facing the incoming Nutanix NCP-MCI-7.5 Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark. Preparation of exam without effective materials is just like a soldier without gun.

The best investment for the future is improving your professional ability and obtaining NCP-MCI-7.5 certification exam will bring you great benefits for you. For most IT candidates, passing NCP-MCI-7.5 actual test will make you stand out from the other people in the interview and offer you more opportunity. The matter now is how to prepare the NCP-MCI-7.5 Questions and answers in a short time, our NCP-MCI-7.5 study guide is the best effective way to get through the exam and obtain the certification.

Pass Guaranteed The Best Nutanix - NCP-MCI-7.5 - Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Test Questions Answers

As we all know, if you want to pass the NCP-MCI-7.5 exam, you need to have the right method of study, plenty of preparation time, and targeted test materials. However, most people do not have one or all of these. That is why I want to introduce our NCP-MCI-7.5 Original Questions to you. So why not try our Nutanix original questions, which will help you maximize your pass rate? Even if you unfortunately fail to pass the exam, we will give you a full refund.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q100-Q105):

NEW QUESTION # 100

An administrator is tasked with configuring a remote site for Data Protection. At the source site, the VMs are in a storage container named Marketing, but they need the data to be replicated to a storage container named Backups at the destination site. What must be configured in order to accomplish this goal?

- A. vStore PD
- B. Network mapping
- **C. vStore mapping**
- D. Network Compression

Answer: C

Explanation:

In Nutanix PD-based disaster recovery, when the source storage container name and the destination storage container name are different, the administrator must explicitly configure a vStore mapping. Nutanix documentation says that each vStores entry maps a local source storage container to a remote target storage container. Nutanix also documents that if you want replication from a local vStore to a remote vStore with different names, you provide the mapping between the local and target containers. That is exactly what this question is asking: source container Marketing, destination container Backups, and replication must know how those two names correspond. (Nutanix Portal) The other choices do not control storage-container placement for replicated data. Network mapping is about network connectivity for failover or recovery testing, not where the storage data lands. Network compression is unrelated to container targeting. vStore PD is not the Nutanix feature name that solves this requirement.

Nutanix's own remote-container best-practice guidance recommends establishing vStore mappings so the target container is deterministic and properly aligned to the protection design. Therefore, the correct and authentic Nutanix answer is C. vStore mapping. (Nutanix Portal)

NEW QUESTION # 101

After scaling out Prism Central to improve resiliency, which additional configuration should an administrator complete?

- **A. Set up VM-VM anti-affinity rules between Prism Central VMs.**
- B. Deploy the Witness service in a separate failure domain.
- C. Enable High Availability Reservations for Prism Element cluster.
- D. Configure a Protection Domain to include all Prism Central VMs.

Answer: A

Explanation:

When Prism Central is scaled out for resiliency, the design goal is not only to have multiple Prism Central VMs, but also to ensure they are not placed together in a way that creates a common point of failure. Nutanix documentation around anti-affinity policies explains that VM-VM anti-affinity is used to keep selected VMs from running on the same host. In a scaled-out Prism Central deployment, this placement separation is the logical next step to strengthen resiliency, because it prevents the Prism Central instances from collapsing onto the same physical host and failing together during a node outage. (Nutanix) The other options are either unrelated or not the primary required follow-up. Witness Service is associated with Metro Availability and DR designs, not with the baseline requirement of distributing Prism Central VMs after scale-out. Protection Domain protection may be useful in some cases, but it does not solve co-location risk. HA reservations on the hosting Prism Element cluster address restart capacity, not placement diversity.

The most direct resiliency improvement after scaling out Prism Central is to enforce separation between the Prism Central VMs. That is why D is the best answer. (Nutanix)

NEW QUESTION # 102

An administrator needs to enable Marketplace in Prism Central before deploying Nutanix apps.

Which prerequisite must be met on the Prism Element cluster hosting Prism Central to enable Marketplace?

- A. SMTP must already be enabled.
- **B. Data services IP must be configured.**
- C. LACP must be configured on all uplinks.
- D. LDAP must be configured.

Answer: B

Explanation:

Nutanix documentation for enabling Marketplace in Prism Central explicitly states that a unique data services IP address (DSIP) must be configured on the Prism Element cluster that hosts Prism Central. This is a hard prerequisite for Marketplace enablement and application deployment workflows. In exam terms, the presence of DSIP is not optional convenience; it is a setup requirement Nutanix calls out directly before Marketplace can be used. (Nutanix) The other answers are not Marketplace prerequisites in the same direct sense. SMTP is useful for email notifications, LDAP for external authentication, and LACP for network design, but none of those is the documented enabling requirement for Marketplace. Nutanix separates platform application management prerequisites from general infrastructure best practices, and DSIP falls into the former category. So when the exam asks what must already be in place on the Prism Element cluster before enabling Marketplace, the correct answer is A: Data services IP must be configured. (Nutanix)

NEW QUESTION # 103

An administrator manages a Nutanix cluster hosting a mixed workload environment, including general- purpose VMs and a specific group of high-sensitivity " PCI-DSS " database servers. The cluster is currently configured with " Data-at-Rest Encryption " disabled at the global cluster level.

A new security mandate requires that all data associated with the " PCI-DSS " workloads must be encrypted at rest using a dedicated external Key Management Server (KMS) for key rotation. The general-purpose VMs, however, must remain unencrypted to avoid unnecessary encryption overhead. The administrator has already deployed and registered the required KMS instance with Prism Central.

Which sequence of configuration steps should the administrator perform in Prism Central to meet this specific encryption requirement?

- A. Create a new Storage Policy, enable encryption within the policy settings, and associate it with category assigned to the PCI-DSS VMs.
- B. Deploy a dedicated Key Management Server and configure the PCI-DSS VMs to use guest-OS level BitLocker encryption.
- C. Create a new Storage Container with " Software Encryption " enabled, map it to the external KMS, and migrate the PCI VMs to this container.
- D. Enable Cluster-level Encryption in the Data-at-Rest settings and exclude all categories except the category assigned to the PCI-DSS VMs.

Answer: A

Explanation:

Nutanix supports storage policy-based encryption in Prism Central, which is exactly the right mechanism when only a subset of workloads needs encryption. Nutanix documentation explains that in addition to cluster- level encryption, administrators can configure storage policies to encrypt data at rest and apply those policies selectively. Since the PCI-DSS workloads are already logically groupable by category, the proper design is to create a storage policy with encryption enabled and then associate it with the category assigned to those VMs.

That makes C correct. (portal.nutanix.com , portal.nutanix.com , portal.nutanix.com) Cluster-level encryption would encrypt too much, which violates the requirement to leave general-purpose VMs unencrypted. Guest OS BitLocker is a separate operating-system control, not the Nutanix platform answer being tested here. Container-centric thinking is older and less flexible than policy-based encryption.

Nutanix's policy model is the authentic platform-aligned solution for category-scoped encryption using an external KMS.

NEW QUESTION # 104

What is the RPO time, in hours, for Prism Central backups?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Nutanix documentation for Prism Central point-in-time backups states that the Recovery Point Objective (RPO) can be configured in values ranging from 1 hour to 24 hours. Since the question asks for the RPO time in hours for Prism Central backups, the expected exam answer is the maximum supported interval of 24 hours, which corresponds to option A.

This is not asking how long recovery takes or how long restore points are retained. Nutanix documents those separately. The RPO

defines how often recovery points can be taken, and Prism Central's backup framework allows choices up to a 24-hour interval. That is why values like 36, 48, or 72 hours are not supported answers in the documented PC backup workflow. So for an authentic Nutanix-aligned study sheet, A. 24 is correct.

NEW QUESTION # 105

.....

Test engine version is a simulation of real test; you can feel the atmosphere of formal test. You can well know your shortcoming and strength in the course of practicing Nutanix exam dumps. It adjusts you to do the NCP-MCI-7.5 Certification Dumps according to the time of formal test. Most IT workers like using it to test NCP-MCI-7.5 practice questions and their ability.

Reliable NCP-MCI-7.5 Exam Tutorial: <https://www.passleadervce.com/NCP-MCI/reliable-NCP-MCI-7.5-exam-learning-guide.html>

They all got help from real and valid PassLeaderVCE Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) practice questions and prepared well for the final Nutanix exam, If you want to fail exam and feel depressed, our Nutanix NCP-MCI-7.5 dumps torrent can help you pass exam one-shot certainly, Secure shopping experience-Reliable NCP-MCI-7.5 Exam Tutorial - Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 training material, Nutanix NCP-MCI-7.5 Test Questions Answers There are 24/7 customer assisting, please feel free to contact us if you have any questions.

The Almighty Certificate Authority, Again, if the defect density can Reliable NCP-MCI-7.5 Exam Tutorial be reduced enough, we can have shippable software with new functionality every day, leading to new business relationships with customers.

Free PDF 2026 Nutanix Authoritative NCP-MCI-7.5: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Test Questions Answers

They all got help from real and valid PassLeaderVCE Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) practice questions and prepared well for the final Nutanix exam, If you want to fail exam and feel depressed, our Nutanix NCP-MCI-7.5 dumps torrent can help you pass exam one-shot certainly.

Secure shopping experience-Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 training material, NCP-MCI-7.5 There are 24/7 customer assisting, please feel free to contact us if you have any questions, With three versions of NCP-MCI-7.5 exam braindumps materials including versions of pdf, software and the value pack, you can choose the suitable version according to your preference and taste.
