At present, our JN0-637 exam guide gains popularity in the market. The quality of our JN0-637 training material is excellent. After all, we have undergone about ten years' development. Never has our practice test let customers down. Although we also face many challenges and troubles, our company get over them successfully. If you are determined to learn some useful skills, our JN0-637 Real Dumps will be your good assistant. Then you will seize the good chance rather than others.

Juniper JN0-637 Exam Syllabus Topics:

Topic	Details
Topic 1	• Automated Threat Mitigation: This topic covers Automated Threat Mitigation concepts and emphasizes implementing and managing threat mitigation strategies.
Topic 2	• Advanced Policy-Based Routing (APBR): This topic emphasizes on advanced policy-based routing concepts and practical configuration or monitoring tasks.
Topic 3	• Multinode High Availability (HA): In this topic, aspiring networking professionals get knowledge about multinode HA concepts. To pass the exam, candidates must learn to configure or monitor HA systems.
Topic 4	• Advanced Network Address Translation (NAT): This section evaluates networking professionals' expertise in advanced NAT functionalities and their ability to manage complex NAT scenarios.
Topic 5	• Layer 2 Security: It covers Layer 2 Security concepts and requires candidates to configure or monitor related scenarios.

Free PDF Quiz High Pass-Rate Juniper - JN0-637 - Security, Professional (JNCIP-SEC) High Quality

We need fresh things to enrich our life. No one would like to be choked by dull routines. So if you are tired of your job or life, you

are advised to try our JN0-637 study guide to refresh yourself. It is a wrong idea that learning is useless and dull. We can make promise that you will harvest enough knowledge and happiness from our JN0-637 Test Engine. Different from traditional learning methods, our products adopt the latest technology to improve your learning experience. We hope that all candidates can try our free demo before deciding buying our JN0-637 practice test. In a word, our study guide is attractive to clients in the market.

Juniper Security, Professional (JNCIP-SEC) Sample Questions (Q53-Q58):

NEW QUESTION # 53
You need to generate a certificate for a PKI-based site-to-site VPN. The peer is expecting to user your domain name vpn.juniper.net.
Which two configuration elements are required when you generate your certificate request?
(Chose two,)

- A. domain-name vpn.juniper.net
- B. email admin@juniper.net
- C. subject CN=vpn.juniper.net
- D. ip-address 10.100.0.5

Answer: A,C

NEW QUESTION # 54
You need to set up source NAT so that external hosts can initiate connections to an internal device, but only if a connection to the device was first initiated by the internal device.
Which type of NAT solution provides this functionality?

- A. Address persistence
- B. Persistent NAT with any remote host
- C. Persistent NAT with target host
- D. Static NAT

Answer: C

Explanation:
Persistent NAT with target host allows external hosts to establish connections only when the internal device initiates a session first, ideal for specific interactive applications. Refer to Juniper Persistent NAT Documentation.
The scenario requires that external hosts be able to initiate a connection only if the internal device has already initiated a connection. The correct solution is Persistent NAT with target host, which ensures that a specific external host can initiate new connections back to the internal device, but only after the internal device has established a session first.
* Persistent NAT with Target Host (Answer C): This allows the internal device to initiate a connection, and once established, the specified external host can also initiate new connections to the internal device on the same NAT mapping.
Example Configuration:
bash
set security nat source persistent-nat permit target-host-port
This solution is appropriate when controlled bidirectional communication is required based on an internal- initiated connection.

NEW QUESTION # 55
Exhibit.
□
Referring to the exhibit, which two statements are true? (Choose two.)

- A. The custom infected hosts feed will not overwrite the Sky ATP infected host's feed.
- B. Juniper Networks will investigate false positives generated by this custom feed.
- C. Juniper Networks will not investigate false positives generated by this custom feed.
- D. The custom infected hosts feed will overwrite the Sky ATP infected host's feed.

Answer: A,C

Explanation:
Juniper Networks will not investigate false positives generated by this custom feed. - Typically, a vendor like Juniper Networks would not investigate false positives generated by a custom feed because the feed content is controlled by the customer, not Juniper.

The custom infected hosts feed will not overwrite the Sky ATP infected host's feed. - Custom feeds are generally additional to the feeds provided by a vendor's threat intelligence platform like Sky ATP. They are used to supplement the existing threat intelligence and do not overwrite it, but rather work alongside it.

NEW QUESTION # 56
Exhibit:
☐
Referring to the exhibit, which two statements are correct?

- A. All of the entries are command and control entries.
- B. All of the entries are a threat level 10.
- C. All of the entries are a threat level 8
- D. All of the entries are Dshield entries

Answer: A,D

Explanation:
Referring to the exhibit, the following statements are correct:
B) All of the entries are command and control entries. Command and control entries are dynamic addresses that represent the IP addresses of servers that are used by malware to communicate with infected hosts. The SRX Series device can block or log the traffic to or from these IP addresses based on the security policies. The exhibit shows that all of the entries have the category DC/1, which stands for command and control1.
C) All of the entries are Dshield entries. Dshield is a feed source that provides a list of IP addresses that are associated with malicious activities, such as scanning, spamming, or attacking. The SRX Series device can download the Dshield feed and use it to populate the dynamic address entries. The exhibit shows that all of the entries have the feed dshield, which indicates that they are from the Dshield feed source2.
The other statements are incorrect because:
A) All of the entries are not a threat level 8, but a threat level 10. The threat level is a numeric value that indicates the severity of the threat associated with a dynamic address entry. The higher the threat level, the more dangerous the threat. The SRX Series device can use the threat level to prioritize the actions for the dynamic address entries. The exhibit shows that all of the entries have the cc CN, which stands for country code China. According to the Juniper documentation, the country code China has a threat level of 10, which is the highest.
D) All of the entries are not a threat level 10, but they are. See the explanation for option A.

NEW QUESTION # 57
Which two statements describe the behavior of logical systems? (Choose two.)

- A. A default routing instance is automatically created for each logical system.
- B. Each logical system has a copy of the routing protocol process.
- C. A default routing instance must be manually created for each logical system
- D. Each logical system shares the routing protocol process.

Answer: A,B

NEW QUESTION # 58
......

For candidates who are going to buy JN0-637 training materials online, you may pay more attention to the money safety. We apply the international recognition third party for the payment, so your account and money safety can be guaranteed if you choose us. In addition, we offer you free demo for you to have a try before buying JN0-637 Exam Dumps, so that you can have a deeper understanding of what you are going to buy. JN0-637 exam braindumps contain both questions and answers, and it's convenient for you to check the answers after practicing. We have the online and offline service, and if you have any questions, you can consult us.
