## 312-85 Pass Guaranteed, Dumps 312-85 Reviews

Quality of 312-85 practice materials you purchased is of prior importance for consumers. Our 312-85 practice materials make it easier to prepare exam with a variety of high quality functions. Their quality function is observably clear once you download them. We have three kinds of 312-85 practice materials moderately priced for your reference. All these three types of 312-85 practice materials win great support around the world and all popular according to their availability of goods, prices and other term you can think of.

To be eligible to take the CTIA certification exam, candidates must have at least two years of experience in the field of cybersecurity and must have completed a training program that covers the exam objectives. Certified Threat Intelligence Analyst certification exam is a four-hour, multiple-choice test that consists of 100 questions. The passing score for the exam is 70%. Upon passing the exam, candidates will receive the CTIA certification, which is valid for three years. To maintain their certification, candidates must earn 60 continuing education credits during the three-year period.

The ECCouncil 312-85 Exam is designed for professionals who work in the field of cyber security, such as threat analysts, incident response personnel, and security operations center (SOC) analysts. It is also suitable for IT and network administrators who are responsible for managing an organization's security infrastructure.

## ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q27-Q32):

### NEW QUESTION # 27

Flora, a threat intelligence analyst at PanTech Cyber Solutions, is working on a threat intelligence program. She is trying to collect the company's crucial information through online job sites.

Which of the following information will Flora obtain through job sites?

- A. Top-level domains and subdomains of the company

- B. Open ports and services
- C. Hardware and software information, network-related information, and technologies used by the company

**Answer: C**

Explanation:

When attackers or analysts search job postings on online job portals, they often uncover technical details inadvertently shared by organizations.

Job listings frequently mention:

- \* Hardware and software used (e.g., "experience with Cisco firewalls, Windows Server 2019").
- \* Network details and tools (e.g., "knowledge of LAN/WAN, AWS, Azure").
- \* Security technologies (e.g., "SIEM tools like Splunk or QRadar").

This information can help analysts identify the technological footprint of the company, which is valuable during threat profiling or reconnaissance.

Why the Other Options Are Incorrect:

- \* B. Top-level domains and subdomains: Obtained through DNS enumeration tools, not job sites.
- \* C. Open ports and services: Found through active scanning tools like Nmap, not via job postings.

Conclusion:

Flora can obtain hardware, software, and network-related information from online job listings.

Final Answer: A. Hardware and software information, network-related information, and technologies used by the company

Explanation Reference (Based on CTIA Study Concepts):

CTIA recognizes online job sites as OSINT sources that can reveal technical environment details about organizations.

### NEW QUESTION # 28

Henry, working as a threat analyst in an organization named MylesTech, wants to share gathered intelligence.

He wants to share the intelligence with a broad range of communities that can be trusted more, but the sensitivity of information is less.

Which of the following tiers of the sharing model must be employed by Henry?

- A. Targeted tier
- B. Private tier
- C. Public tier
- D. Multitier

**Answer: C**

Explanation:

In the Threat Intelligence Sharing Model, the Public Tier is used when information is of low sensitivity and can be shared widely across communities, industry groups, or the public domain.

This tier is ideal for sharing generalized threat data, advisories, or non-sensitive indicators that do not pose risks to the organization if disclosed.

Why the Other Options Are Incorrect:

- \* Private tier: Used for highly sensitive intelligence shared only within a small internal group or trusted partners.
- \* Targeted tier: Shared with specific, predefined organizations or partners with a need-to-know basis.
- \* Multitier: Involves multiple sharing levels but is not a standard individual tier type.

Conclusion:

Henry should use the Public Tier, suitable for broader sharing of low-sensitivity information.

Final Answer: B. Public tier

Explanation Reference (Based on CTIA Study Concepts):

As per CTIA's "Threat Intelligence Sharing Framework," the public tier enables dissemination of low- sensitivity threat intelligence to trusted communities for collaborative defense.

### NEW QUESTION # 29

What term describes the trust establishment process, wherein the first organization relies on a body of evidence presented to the second organization, and the level of trust is contingent upon the degree and quality of evidence provided by the initiating organization?

- A. Direct historical trust
- B. Mediated trust

- C. Validated trust
- D. Mandated trust

**Answer: C**

Explanation:

The scenario describes a trust establishment process where one organization bases its trust in another on the degree and quality of evidence that the second organization provides. This concept is known as Validated Trust.

Validated Trust is built through the verification and assessment of presented evidence such as certifications, security audits, compliance documentation, or past performance. The higher the credibility and quality of the evidence, the greater the level of trust established.

This type of trust is evidence-based, meaning it does not rely solely on previous interactions or third-party mediation but on verifiable proof provided directly between the entities involved.

Why the Other Options Are Incorrect:

- \* A. Mandated Trust: This is imposed by regulation, policy, or authority. It is not based on evidence but on obligation or requirement.
- \* B. Direct Historical Trust: This trust is formed from prior experiences and a consistent history of interactions between the entities. It does not depend on new evidence or documentation.
- \* D. Mediated Trust: This form of trust is established through an intermediary (such as a trusted third party or certificate authority) who vouches for the credibility of one organization to another.

Conclusion:

The process where trust is established based on the degree and quality of evidence provided by one party is known as Validated Trust.

Final Answer: C. Validated Trust

Explanation Reference (Based on CTIA Study Concepts):

According to the CTIA study topics under "Information Sharing and Trust Establishment," validated trust is the level of confidence gained through verification of tangible evidence, certifications, or attestations demonstrating security assurance and reliability.

### NEW QUESTION # 30

Kathy wants to ensure that she shares threat intelligence containing sensitive information with the appropriate audience. Hence, she used traffic light protocol (TLP).

Which TLP color would you signify that information should be shared only within a particular community?

- A. Red
- B. Green
- C. Amber
- D. White

**Answer: C**

### NEW QUESTION # 31

Alice, an analyst, shared information with security operation managers and network operations center (NOC) staff for protecting the organizational resources against various threats. Information shared by Alice was highly technical and include threat actor TTPs, malware campaigns, tools used by threat actors, and so on.

Which of the following types of threat intelligence was shared by Alice?

- A. Operational threat intelligence
- B. Strategic threat intelligence
- C. Technical threat intelligence
- D. Tactical threat intelligence

**Answer: C**
