# Latest CloudSec-Pro Dumps Ppt | Definitely Pass | Refund Gurarnteed

Dear every IT candidates, here, I will recommend itPass4sure CloudSec-Pro exam training material to all of you. If you use Palo Alto Networks CloudSec-Pro test bootcamp, you will not need to purchase anything else or attend other training. We promise that you can pass your CloudSec-Pro Certification at first attempt. The high pass rate has helped lots of IT candidates get their IT certification. In case of failure, we promise to give you full refund. No help, full refund!

Every person in the IT industry has his own dream: to pass CloudSec-Pro certification exam, or a promotion, a raise and so on in the IT career. The dream of itPass4sure is to help you achieve CloudSec-Pro exam certification. After you purchase our CloudSec-Pro Exam Dumps training materials, we will provide one year free renewal service. If you fail CloudSec-Pro certification exam, we can guarantee you that we will give you a full refund.

New Palo Alto Networks CloudSec-Pro Braindumps Questions | CloudSec-Pro Latest Exam Duration

Our CloudSec-Pro practice quiz will provide three different versions, the PDF version, the software version and the online version. The trait of the software version of our CloudSec-Pro exam dump is very practical. Although this version can only be run on the windows operating system, the software version our CloudSec-Pro Guide materials is not limited to the number of computers installed, you can install the software version in several computers. So you will like the software version, of course, you can also choose other versions of our CloudSec-Pro study torrent if you need.

Palo Alto Networks Cloud Security Professional Sample Questions (Q247-Q252):

NEW QUESTION # 247
How often do Defenders share logs with Console?

- A. Real time
- B. Every 10 minutes
- C. Every 1 hour
- D. Every 30 minutes

Answer: A

Explanation:
In Prisma Cloud, Defenders play a crucial role in securing cloud environments by monitoring and protecting workloads. The communication between Defenders and the Prisma Cloud Console occurs in real-time, allowing for immediate detection of threats, vulnerabilities, and compliance issues. This real-time communication is essential for maintaining an up-to-date security posture and promptly responding to potential security incidents. The real-time nature of Defender-Console communication ensures that security teams have the latest information and can take swift actions to mitigate risks.

NEW QUESTION # 248

Which three types of buckets exposure are available in the Data Security module? (Choose three.)

- A. Private
- B. International
- C. Conditional
- D. Differential
- E. Public

Answer: A,C,E

Explanation:

In the Data Security module of cloud security platforms like Prisma Cloud, the types of bucket exposures typically include Public (option A), Private (option B), and Conditional (option E). Public buckets are accessible by anyone on the internet, posing a significant data leakage risk. Private buckets are restricted to authorized users only, offering a higher level of security. Conditional exposure involves buckets that may be accessible under certain conditions or to specific users, requiring careful configuration and policy enforcement to prevent unauthorized access. International (option C) and Differential (option D) do not represent standard types of bucket exposures in cloud security contexts.

NEW QUESTION # 249

A customer wants to be notified about port scanning network activities in their environment. Which policy type detects this behavior?

- A. Network
- B. Anomaly
- C. Port Scan
- D. Config

Answer: B

Explanation:

https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/anomaly- policies

NEW QUESTION # 250

The attempted bytes count displays?

- A. traffic that is either denied by the security group or firewall rules or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.
- B. traffic that is either denied by the security group or firewall rules.
- C. traffic denied by the security group or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.
- D. traffic that is either denied by the firewall rules or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.

Answer: A

Explanation:

The attempted bytes count in Prisma Cloud's context refers to the amount of traffic that is either denied by security group or firewall rules, or the traffic that was reset by a host or virtual machine (VM) that received the packet and responded with a RST (Reset) packet (A). This metric is crucial for understanding the nature of blocked or interrupted traffic within the cloud environment, helping administrators identify potential security threats or misconfigurations that may be preventing legitimate traffic. It encompasses both the traffic actively blocked by security controls and the traffic that the receiving entity deemed invalid or unwanted, thus providing a comprehensive view of the network's defensive posture.

NEW QUESTION # 251

Which "kind" of Kubernetes object is configured to ensure that Defender is acting as the admission controller?

- A. PodSecurityPolicies
- B. DestinationRules
- C. ValidatingWebhookConfiguration
- D. MutatingWebhookConfiguration

Answer: C

Explanation:
In the context of Kubernetes, an admission controller is a piece of code that intercepts requests to the Kubernetes API server before the persistence of the object, but after the request is authenticated and authorized. The admission controller lets you apply complex validation and policy controls to objects before they are created or updated.
The ValidatingWebhookConfiguration is a Kubernetes object that tells the API server to send an admission validation request to a service (the admission webhook) when a request to create, update, or delete a Kubernetes object matches the rules defined in the configuration. The webhook can then approve or deny the request based on custom logic.
The MutatingWebhookConfiguration is similar but is used to modify objects before they are created or updated, which is not the primary function of an admission controller acting in a protective or validating capacity.
DestinationRules are related to Istio service mesh and are not relevant to Kubernetes admission control.
PodSecurityPolicies (PSPs) are a type of admission controller in Kubernetes but they are predefined by Kubernetes and do not require a specific configuration object like ValidatingWebhookConfiguration. PSPs are also deprecated in recent versions of Kubernetes.
Therefore, the correct answer is C. ValidatingWebhookConfiguration, as it is the Kubernetes object used to configure admission webhooks for validating requests, which aligns with the role of Defender acting as an admission controller in Prisma Cloud.
References from the provided documents:
* The documents uploaded do not contain specific details about Kubernetes objects or Prisma Cloud's integration with Kubernetes. However, this explanation aligns with general Kubernetes practices and Prisma Cloud's capabilities in securing Kubernetes environments.

NEW QUESTION # 252

......

Through the stimulation of the CloudSec-Pro real exam the clients can have an understanding of the mastery degrees of our CloudSec-Pro exam practice question in practice. Thus our clients can understand the abstract concepts in an intuitive way. In the answers, our experts will provide the authorized verification and detailed demonstration so as to let the learners master the latest information timely and follow the trend of the times. All we do is to integrate the most advanced views into our CloudSec-Pro Test Guide.
