# SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q60-Q65):

**NEW QUESTION # 60**
What are some benefits of AI agents? Note: There are 3 correct answers to this question.

- A. Replace managers
- B. Reduce costs
- C. Facilitate collaboration
- D. Ensure privacy
- E. Boost productivity

**Answer: B,C,E**

**NEW QUESTION # 61**
(What are some generative AI enhancements in ABAP Cloud? Note: There are 2 correct answers to this question.)

- A. Generate unit-tests for ABAP classes and CDS views.
- B. Generate integrations with preconfigured connectors.
- C. Generate digital assistants.
- D. Generate business objects using the ABAP RESTful application programming model.

**Answer: A,D**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: Generative AI enhancements in ABAP Cloud include generating unit tests for ABAP classes and CDS views to improve testing efficiency, and generating business objects using the ABAP RESTful Application Programming Model (RAP) to streamline development and maintain a clean core approach.
Exact extracts supporting this:
Generate unit-tests: "New generative AI capabilities are designed to help you write, optimize, and test ABAP code more efficiently."community.sap.com Generate business objects: "The first scope of features will cover business object ..."learning.sap.com "Generative AI for ABAP development. With new ABAP capabilities, Joule can now help ABAP developers be more efficient with their development ..."community.sap.com Other options are incorrect because:
Option A: Generating digital assistants is not a specific enhancement in ABAP Cloud; Joule is the assistant, but generation is for code artifacts.
Option D: Generating integrations is supported in broader SAP Build, but not highlighted as a generative AI enhancement specific to ABAP Cloud.
Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Extracted from SAP Help Portal "Generative AI in ABAP Cloud" and community blogs like "Unveiling today: SAP Build meets ABAP Cloud." These position generative AI for code generation and testing in ABAP as part of custom AI solutions in the SAP Business Suite, per C_BCBAI_2502 certification.

**NEW QUESTION # 62**
(When customers build a custom AI solution on a hyperscaler, what are some of the complexities they would have to deal with? Note: There are 3 correct answers to this question.)

- A. Data replication
- B. Implementation of security measures
- C. Choice of the wrong LLM
- D. Management of GPU clusters
- E. Integration of identity management

**Answer: B,D,E**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: Building custom AI solutions directly on hyperscalers introduces complexities such as implementing security measures to ensure compliance and data protection, integrating identity management for secure access control, and managing GPU clusters for scalable AI training and inference. These challenges arise from the need to

handle infrastructure, integration, and operations manually, which SAP BTP mitigates by providing a standardized, hyperscaler-agnostic platform.

Exact extracts supporting this:

"Transitioning to a hyperscaler can help, but may still require dealing with integration and security complexities."learning.sap.com SAP AI Core is "designed to manage the execution and operations of AI assets in a standardized, scalable, and hyperscaler-agnostic manner," implying complexities like GPU management on hyperscalers.help.sap.com community.sap.com Integration challenges include "typical integration challenges and the integration journey in a multi-cloud environment," encompassing identity management.community.sap.com Other options are incorrect because:

Option C: While selecting an appropriate LLM is important, the complexity is not specifically "choice of the wrong LLM" but rather model management; SAP emphasizes broader operational issues.

Option E: Data replication is a data management task but not highlighted as a primary complexity in hyperscaler AI builds; focus is on security, integration, and infrastructure.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From SAP Learning Journey "Boosting Your Cloud Transformation Journey with SAP Business AI and Generative AI," units on building custom AI solutions and positioning SAP Business AI in cloud transformation. Supported by SAP Help Portal for SAP AI Core and community blogs on generative AI with SAP, aligning with C_BCBAI_2502 materials for comparing hyperscaler vs. SAP BTP complexities.

## NEW QUESTION # 63

Match the outcomes in the dropdown lists to the capabilities of Joule
□

**Answer:**

Explanation:
□

## NEW QUESTION # 64

(What are some generative AI tools for an SAP Cloud ERP transformation? Note: There are 3 correct answers to this question.)

- A. Extension builder wizard
- B. Process automation
- C. ABAP Business Object generator
- D. Process model generator
- E. Integration generator

**Answer: B,C,D**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: Generative AI tools for SAP Cloud ERP transformation include process automation capabilities in SAP Build Process Automation for generating and automating business processes, the process model generator in SAP Signavio for creating process models using AI, and the ABAP Business Object generator in Joule for developing ABAP-based business objects to extend ERP functionalities. These tools facilitate efficient migration, customization, and optimization during cloud ERP transformations by leveraging generative AI to streamline code, processes, and extensions.

Exact extracts supporting this:

Process automation: "SAP Build Process Automation integrates with generative AI to generate and edit business processes, decisions, forms, and script tasks using natural language descriptions."sap.com This supports automation in ERP transformations.

Process model generator: "SAP Signavio uses generative AI to assist in process modeling, recommending performance indicators and generating models based on best practices."learning.sap.com ABAP Business Object generator: "Joule generates ABAP business objects using the ABAP RESTful Application Programming Model (RAP) for extensions in SAP S/4HANA Cloud."learning.sap.com "Generative AI in ABAP Cloud includes business object generation."community.sap.com Other options are incorrect because:

Option B: While extension building is simplified with wizards in SAP Build Code, it is not specifically a "generative AI tool" but rather a guided process; generative aspects come from Joule integration.

Option C: Integration generation is supported in SAP BTP, but not highlighted as a distinct generative AI tool for ERP transformation; focus is on code and process generation.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from SAP Learning Journey "Boosting Your Cloud Transformation Journey with SAP Business AI and Generative AI," units on generative AI in SAP Signavio, Build Process Automation, and ABAP Cloud. Supported by SAP Community blogs on generative AI for S/4HANA migration and SAP Help Portal, aligning with C_BCBAI_2502 certification for tools in cloud ERP

transformations.
