

2026 CloudSec-Pro: Palo Alto Networks Cloud Security Professional–Professional Pdf Dumps

We have the free demo for the CloudSec-Pro study guide, it will help you to have a better understanding of the exam dumps, if you decide to buy and pay for it, we will send the downloading link and password to you within 10 minutes, and if you don't receive it, please contact to our service stuff, we will deal with the problem for you immediately. What's more, free update for the CloudSec-Pro Study Guide for 365 days, and the update version will send to you by email automatically, therefore you can have the latest information for the Palo Alto Networks Cloud Security Professional.

The three versions of our CloudSec-Pro training materials each have its own advantage, now I would like to introduce the advantage of the software version for your reference. On the one hand, the software version can simulate the real CloudSec-Pro examination for all of the users in windows operation system. On the other hand, if you choose to use the software version, you can download our CloudSec-Pro Exam Prep on more than one computer. We strongly believe that the software version of our study materials will be of great importance for you to prepare for the exam and all of the employees in our company wish you early success.

100% Pass 2026 The Best Palo Alto Networks CloudSec-Pro: Palo Alto Networks Cloud Security Professional Pdf Dumps

TestPDF offers actual Palo Alto Networks Cloud Security Professional Exam Questions that make your success possible on the first try. TestPDF has helped many customers gain high scores. Before purchasing, you can download and try any CloudSec-Pro Exam Questions format. Palo Alto Networks Cloud Security Professional CloudSec-Pro with excellent pass rate.

Palo Alto Networks Cloud Security Professional Sample Questions (Q256-Q261):

NEW QUESTION # 256

An administrator sees that a runtime audit has been generated for a Container. The audit message is "DNS resolution of suspicious name wikipedia.com. type A".

Why would this message appear as an audit?

- A. This is a DNS known to be a source of malware.
- B. The Layer7 firewall detected this as anomalous behavior.
- C. The DNS was not learned as part of the Container model or added to the DNS allow list.
- D. The process calling out to this domain was not part of the Container model.

Answer: C

Explanation:

The runtime audit message indicating "DNS resolution of suspicious name wikipedia.com type A" would appear as an audit because the DNS was not learned as part of the Container model or added to the DNS allow list (option A). In cloud security platforms like Prisma Cloud, runtime protection policies monitor the behavior of running containers and compare it against a learned model of expected behavior. If a container attempts to resolve a DNS name that was not observed during the learning phase or specifically allowed, it triggers an audit event to alert security teams of potentially malicious activity.

NEW QUESTION # 257

A customer wants to monitor the company's AWS accounts via Prisma Cloud, but only needs the resource configuration to be monitored for now.

Which two pieces of information do you need to onboard this account? (Choose two.)

- A. Active Directory ID
- B. External ID
- C. Role ARN
- D. Cloudtrail
- E. Subscription ID

Answer: C,D

Explanation:

To onboard an AWS account into Prisma Cloud for the purpose of monitoring resource configurations, the necessary information includes the Role ARN (Amazon Resource Name) and CloudTrail setup. The Role ARN (Option E) is crucial because Prisma Cloud requires permission to access and monitor resources within the AWS account, which is facilitated through an IAM role that Prisma Cloud can assume. This IAM role must have the necessary permissions to access AWS services and resources that Prisma Cloud needs to monitor. CloudTrail (Option A) is essential for auditing and monitoring API calls within the AWS environment, including those related to resource configurations. It provides visibility into user and resource activity by recording API calls made on the account. CloudTrail logs are used by Prisma Cloud to detect changes in resource configurations and ensure compliance with security policies. Subscription ID (Option B) and Active Directory ID (Option C) are more relevant to Azure cloud environments, not AWS. External ID (Option D) is used in a cross-account role trust relationship to prevent the "confused deputy" problem, but it's not specifically required just to onboard the account for resource configuration monitoring.

NEW QUESTION # 258

The InfoSec team wants to be notified via email each time a Security Group is misconfigured. Which Prisma Cloud tab should you choose to complete this request?

- A. Alert Rules
- B. Notifications
- C. Events
- D. Policies

Answer: A

Explanation:

In Prisma Cloud, to notify the InfoSec team via email about misconfigured Security Groups, the appropriate tab to use is "Alert Rules." Alert rules in Prisma Cloud define the conditions under which alerts are generated and the notification channels, including email, where these alerts are sent. By configuring alert rules related to Security Group misconfigurations, the platform can automatically notify the team when such an event occurs, ensuring prompt awareness and response to potential security issues.

NEW QUESTION # 259

How many CLI remediation commands can be added in a custom policy sequence?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

You can define up to 5 CLI commands in a sequence for a multi-step automatic remediation workflow. Add the commands in the sequence you want them to execute and separate the commands with a semi colon. If any CLI command included in the sequence fails, the execution stops at that point.

The Prisma Cloud platform allows administrators to define up to 5 CLI commands in a sequence for a multi- step automatic remediation workflow. These commands should be added in the order they are intended to be executed and must be separated by a semicolon. If any CLI command in the sequence fails during execution, the process stops at that point. This feature enables administrators to automate the remediation process efficiently and effectively, ensuring that actions are taken in a specific order to address alerts or compliance issues.

This capability is detailed in the Prisma Cloud documentation under the section for configuring Prisma Cloud to automatically remediate alerts. It's an important feature for maintaining security and compliance in cloud environments, as it allows for quick and automated responses to identified issues.

NEW QUESTION # 260

Which intensity setting for anomaly alerts is used for the measurement of 100 events over 30 days?

- A. High
- B. Medium
- C. Very High
- D. Low

Answer: B

Explanation:

In the context of setting anomaly alert intensities in Prisma Cloud, an intensity setting of "Medium" could be used for the measurement of 100 events over 30 days. This setting indicates a moderate level of anomaly detection sensitivity, which is suitable for environments where there is a need to balance between detecting potential security issues and minimizing false positives.
