BTW, DOWNLOAD part of PrepAwayPDF SOA-C02 dumps from Cloud Storage: [https://drive.google.com/open?id=1NOCd8tcT\\_vNadsBx9U186iKQh0CayFm3](https://drive.google.com/open?id=1NOCd8tcT_vNadsBx9U186iKQh0CayFm3)

With the Amazon SOA-C02 certification exam you will get an opportunity to learn new and in-demand skills. In this way, you will stay updated and competitive in the market and advance your career easily. To do this you just need to pass the AWS Certified SysOps Administrator - Associate (SOA-C02) SOA-C02 Certification Exam.

The SOA-C02 exam is a comprehensive exam that covers various topics related to AWS services, such as EC2, S3, RDS, DynamoDB, Elastic Beanstalk, and many others. SOA-C02 exam also covers various operational aspects, such as monitoring, logging, and automation of AWS resources. SOA-C02 exam consists of 65 multiple-choice and multiple-response questions, and the candidate has 130 minutes to complete the exam. The passing score for the exam is 720 out of 1000.

Amazon SOA-C02 Certification Exam is designed for professionals who want to demonstrate their expertise in deploying, managing, and operating scalable, highly available, and fault-tolerant systems on AWS. AWS Certified SysOps Administrator - Associate (SOA-C02) certification exam is intended for individuals who have one or more years of hands-on experience in operating and managing AWS-based applications and infrastructure.

## Training SOA-C02 Kit & SOA-C02 Reliable Test Guide

There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the SOA-C02 exam questions for all customers. More importantly, we believe once you finally gain the SOA-C02 certification with our SOA-C02 exam questions and you will find enormous benefits: more enjoyment of life and better relationships and less stress and a better quality of life overall. So it is very significant for you to do everything in your power to pass the SOA-C02 Exam and get the related certification.

## Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q62-Q67):

NEW QUESTION # 62

A company wants to archive sensitive data on Amazon S3 Glacier. The company's regulatory and compliance requirements do not allow any modifications to the data by any account. Which solution meets these requirements?

- A. Configure S3 Object Lock in governance mode. Upload all files within 24 hours.
- B. Configure S3 Object Lock in governance mode. Upload all files after 24 hours.
- C. Attach a vault lock policy to an S3 Glacier vault that contains the archived data. Use the lock ID to validate the vault lock policy within 24 hours.
- **D. Attach a vault lock policy to an S3 Glacier vault that contains the archived data. Use the lock ID to validate the vault lock policy after 24 hours.**

**Answer: D**

Explanation:

To meet regulatory and compliance requirements for archiving sensitive data on Amazon S3 Glacier with no modifications allowed by any account, attaching a vault lock policy to an S3 Glacier vault and validating the vault lock policy after 24 hours is the most appropriate solution.

Vault Lock Policy:

Amazon S3 Glacier Vault Lock allows you to easily deploy and enforce compliance controls for individual S3 Glacier vaults via a lockable policy.

You can specify controls such as Write Once Read Many (WORM) in a vault lock policy and lock the policy from future edits.

Implementing Vault Lock:

Attach a vault lock policy to the S3 Glacier vault that contains the archived data.

Initiate the vault lock process, which involves providing a policy and locking it after a validation period of 24 hours.

Steps:

Open the S3 Glacier console.

Select the vault and configure a vault lock policy with the required compliance controls.

Use the `InitiateVaultLock` API to set the policy and start the lock process.

Validate and complete the lock process after 24 hours using the lock ID.

Managing S3 Glacier Vault Lock Policies

### NEW QUESTION # 63

A company has a multi-account environment. Account A has a production application that is hosted on an Amazon EC2 instance. The application needs to query data in an Amazon DynamoDB table that is hosted in Account B.

A SysOps administrator needs to provide the EC2 instance in Account A with access to the DynamoDB table in Account B.

What is the MOST secure solution that will meet these requirements?

- A. Update the IAM policy that is attached to the EC2 instance's IAM role to allow the `dynamodb:Query` permission on the DynamoDB table in Account B. Add a policy in Account A to allow the DynamoDB service principal to use the `PassRole` action to pass the role to Account B.
- **B. In Account B, create an IAM role that has permission to query the DynamoDB table. Add the EC2 instance's IAM role to the trust policy on the newly created IAM role in Account B. Update the IAM policy that is attached to the EC2 instance's IAM role to allow the `sts:AssumeRole` permission on the newly created IAM role in Account B.**
- C. Update the IAM policy that is attached to the EC2 instance's IAM role to allow the `dynamodb:Query` permission on the DynamoDB table in Account B. Update the DynamoDB table's resource policy to allow the query action from the EC2 instance's IAM role.
- D. In Account B, create a static IAM key that has the appropriate permissions to query the DynamoDB table. Embed these credentials into the credentials file on the EC2 instance. Reference the credentials every time the application needs to query the table.

**Answer: B**

### NEW QUESTION # 64

A company is hosting applications on Amazon EC2 instances. The company is hosting a database on an Amazon RDS for PostgreSQL DB instance. The company requires all connections to the DB instance to be encrypted.

What should a SysOps administrator do to meet this requirement?

- A. Enforce SSL connections to the database by using a custom parameter group.
- B. Encrypt the database by using an AWS Key Management Service (AWS KMS) encryption key.
- C. Allow SSL connections to the database by using an inbound security group rule.
- D. Patch the database with SSL/TLS by using a custom PostgreSQL extension.

**Answer: A**

Explanation:

<https://docs.aws.amazon.com/AmazonRDS/latest/UserGuide/PostgreSQL.Concepts.General.SSL.htm> Amazon RDS supports SSL/TLS encryption for connections to the database, and this can be enabled by creating a custom parameter group and setting the `rds.force_ssl` parameter to 1. This will ensure that all connections to the database are encrypted, protecting the data and maintaining compliance with the company's requirements.1

#### NEW QUESTION # 65

A company creates a new member account by using AWS Organizations. A SysOps administrator needs to add AWS Business Support to the new account Which combination of steps must the SysOps administrator take to meet this requirement? (Select TWO.)

- A. Create an IAM user that has administrator privileges in the new account.
- B. Sign in to the new account by using IAM credentials. Change the support plan.
- C. Sign in to the new account by using root user credentials. Change the support plan.
- D. Reset the password of the account root user.
- E. Use the AWS Support API to change the support plan.

**Answer: C,D**

#### NEW QUESTION # 66

A SysOps administrator Is troubleshooting an AWS Cloud Formation template whereby multiple Amazon EC2 instances are being created The template is working In us-east-1. but it is failing In us-west-2 with the error code:

How should the administrator ensure that the AWS Cloud Formation template is working in every region?

- A. Modify the AWS CloudFormation template by including the AMI IDs in the "Mappings" section. Refer to the proper mapping within the template for the proper AMI ID.
- B. Edit the AWS CloudFormation template to specify the region code as part of the fully qualified AMI ID.
- C. Edit the AWS CloudFormation template to offer a drop-down list of all AMIs to the user by using the `aws::EC2::ami::imageId` control.
- D. Copy the source region's Amazon Machine Image (AMI) to the destination region and assign it the same ID.

**Answer: D**

#### NEW QUESTION # 67

.....

Our SOA-C02 exam dumps provide you the best learning opportunity with employing minimum efforts while the results are pleasantly surprising beyond your expectations. The quality of our SOA-C02 preparation materials is outstanding and famous. We can claim that if you study with our SOA-C02 learning guide for 20 to 30 hours, then you are bound to pass the exam with confidence. Meanwhile, you will enjoy the study experience for there are three different versions to choose from.
