Trustable Salesforce - B2B-Commerce-Developer - Online Salesforce Accredited B2B Commerce Developer Training

We know that every user has their favorite. Therefore, we have provided three versions of B2B-Commerce-Developer practice guide: the PDF, the Software and the APP online. You can choose according to your actual situation. If you like to use computer to learn, you can use the Software and the APP online versions of the B2B-Commerce-Developer Exam Questions. If you like to write your own experience while studying, you can choose the PDF version of the B2B-Commerce-Developer study materials. Our PDF version can be printed and you can take notes as you like.

Salesforce Accredited B2B Commerce Developer Sample Questions (Q100-Q105):

NEW QUESTION # 100

A developer is creating a component to implement a custom Terms and Conditions checkbox at checkout in the Aura Commerce template.

Which method should the developer implement on the Lightning web component to ensure the user accepts the terms and conditions?

- A. ComponentValidity
- **B. Validate**
- C. SaveCheckout
- D. CheckValidity

Answer: B

Explanation:

Explanation

To implement a custom Terms and Conditions checkbox at checkout in the Aura Commerce template, a developer should add a Desired Delivery Date input field during the checkout flow. The Desired Delivery Date input field allows the customer to enter a date when they want their order to be delivered. The developer can use the `@api` decorator to expose this field as a public property of the Lightning web component and bind it to the `ccCheckoutOrder` object. The developer can also use the `@wire` decorator to get the current cart object and use its properties, such as shipping address and shipping method, to calculate and display an estimated delivery date based on the desired delivery date. The developer can also add validation logic to ensure that the desired delivery date is valid and acceptable. Adding the Expected Delivery Date field to the order confirmation email is not a good solution, as it does not allow the customer to choose or see their delivery date before placing their order. Displaying the Expected Delivery Date on the order page with a Lightning web component is not a good solution either, as it does not allow the customer to enter or change their delivery date after placing their order. Configuring an email alert to the customer when the Expected Delivery Date changes is not a good solution either, as it does not provide a consistent or reliable way of informing the customer about their delivery date.

NEW QUESTION # 101

What two things happen with the Cart during tax implementation?

- A. New entries are written to the Order Summary
- **B. Previous entries are deleted from the Cart**
- C. Previous entries are copied to another object
- **D. New entries are written to the Cart**

Answer: B,D

Explanation:

Explanation

Two things that happen with the cart during tax implementation are that new entries are written to the cart and previous entries are deleted from the cart. A tax implementation is an integration that calculates and applies tax rates and amounts to a cart or an order based on various factors, such as product type, price, quantity, location, and tax rules. A tax implementation can use either an external tax service provider or custom Apex code to perform the tax calculation. When a tax implementation is invoked for a cart, it writes new entries to the cart with a type of Charge and a charge type of Tax. These entries represent the tax amounts and adjustments that are applied to the cart. Before writing new entries to the cart, the tax implementation deletes any existing entries with a type of Charge and a charge type of Tax from the cart. This ensures that the tax calculation is accurate and up-to-date based on the current state of the cart and avoids any conflicts or inconsistencies with previous tax entries. Previous entries are not copied to another object or modified with the new tax calculation, as these are not valid actions for handling existing tax entries. NEW QUESTION # 102

What is a best practice when passing query parameters from user interface to an apex controller?

- A. String parameters should be trimmed using `String.trim()`.
- **B. Query parameters should be properly sanitized by using `JSINHTMLENCODE` within the VisualForce Page or Component.**
- C. Query parameters should be passed only to Salesforce B2B Commerce classes that you are extending.
- D. Query parameters should be stored on a backbone model prior to passing them to the server

Answer: B

Explanation:

A best practice when passing query parameters from user interface to an apex controller is to query parameters should be properly sanitized by using JSINHTMLENCODE within the VisualForce Page or Component. This function will encode any special characters in the query parameters to prevent cross-site scripting (XSS) attacks or SOQL injection attacks. For example, `ccrz.ccRemoteActions.getProducts(' {!JSINHTMLENCODE(searchTerm)!}')` will encode the searchTerm parameter before passing it to the apex controller. NEW QUESTION # 103

What are two advantages of using Lightning Data Service?

- A. Combines and de-duplicates server calls
- B. Loads record data progressively
- C. Converts between different data formats
- D. Communicates with other components

Answer: A,B

Explanation:

Two advantages of using Lightning Data Service are that it combines and de-duplicates server calls and that it loads record data progressively. Lightning Data Service is a service that provides access to Salesforce data and metadata in Lightning web components. It optimizes performance and minimizes server round trips by caching data on the client side and sharing data across components. It also combines and de-duplicates server calls by batching requests for the same record or object and returning a single response. It also loads record data progressively by returning available cached data first and then fetching updated data from the server asynchronously. Communicating with other components and converting between different data formats are not advantages of using Lightning Data Service, as they are not related to its functionality or features. NEW QUESTION # 104

The `ccUtil` apex class in Salesforce B2B Commerce provides numerous utility functions that can be leveraged in subscriber classes. Which command will return the value in the given Map if found or a default value in the event that the Map is null, empty, or an object is not found for that key?

- A. `ccrz.ccUtil.defaultValue(Map<String, Object> mp, String key, Object ob)`
- B. `ccrz.ccUtil.defVal (Map<String, Object> mp, String key, Object ob)`
- C. `ccrz.ccUtil.... (Map<String, Object> mp, String key, Object ob)`
- D. `ccrz.ccUtil.defv (Map<String, Object> mp, String key, Object ob)`

Answer: D

NEW QUESTION # 105

.....

In contemporary society, information is very important to the development of the individual and of society B2B-Commerce-Developer practice test. In terms of preparing for exams, we really should not be restricted to paper material, our electronic B2B-Commerce-Developer preparation materials will surprise you with their effectiveness and usefulness. I can assure you that you will pass the B2B-Commerce-Developer Exam as well as getting the related certification. There are so many advantages of our electronic B2B-Commerce-Developer study guide, such as High pass rate, Fast delivery and free renewal for a year to name but a few.
