

Study Your Salesforce Data-Architect: Salesforce Certified Data Architect Exam with 100% Pass-Rate Data-Architect Real Dumps Free Surely

DOWNLOAD the newest ExamTorrent Data-Architect PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1kXtcQEo2XH6t8pAtxKjXZCJD6I567I0E>

The Data-Architect latest question from our company can help people get their Data-Architect certification in a short time. If you want to get the Data-Architect certification to improve your life, we can tell you there is no better alternative than our Data-Architect exam questions. The Data-Architect test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Our product is affordable and good, if you choose our products, we can promise that our Data-Architect Exam Torrent will not let you down.

Salesforce Certified Data Architect certification is a valuable asset for professionals looking to advance their careers in the Salesforce ecosystem. It is recognized by employers as a mark of excellence and is often a requirement for senior-level positions in the industry. Salesforce Certified Data Architect certification is also a prerequisite for the Salesforce Certified Technical Architect certification, which is the highest level of certification in the Salesforce ecosystem.

To prepare for the Salesforce Certified Data Architect exam, candidates should have a strong understanding of Salesforce data management concepts, as well as experience working with various Salesforce data tools and technologies. They should also be familiar with industry-standard data modeling and database design principles, and have a good understanding of data integration and security best practices. With the right preparation and a solid understanding of the exam content, candidates can successfully pass the Salesforce Certified Data Architect exam and take their career to the next level.

Exam Data-Architect Tutorial - Data-Architect Valid Test Format

The objective of the ExamTorrent is to give you quick access to Salesforce Certified Data Architect (Data-Architect) actual questions. Offering Salesforce Certified Data Architect (Data-Architect) updated dumps is the only factor behind the dominance of ExamTorrent in the market. Our customers will see our Salesforce Certified Data Architect (Data-Architect) questions in the final certification test. We have a devoted team who puts in a lot of effort to keep the Data-Architect dumps updated. ExamTorrent informs you that the Salesforce Certified Data Architect (Data-Architect) questions regularly change the content of the real exam.

Salesforce Certified Data Architect certification exam is one of the most prestigious certifications in the Salesforce ecosystem. It is intended for professionals who have experience in designing and developing data solutions using Salesforce. Salesforce Certified Data Architect certification exam covers a wide range of topics, including data modeling, data architecture, data integration, data storage, and data governance.

Salesforce Certified Data Architect Sample Questions (Q226-Q231):

NEW QUESTION # 226

Universal Containers (UC) wants to store product data in Salesforce, but the standard Product object does not support the more complex hierarchical structure which is currently being used in the product master system.

How can UC modify the standard Product object model to support a hierarchical data structure in order to synchronize product data from the source system to Salesforce?

- A. Create a custom master-detail field on the standard Product to reference the child record in the hierarchy.
- **B. Create a custom lookup field on the standard Product to reference the parent record in the hierarchy.**
- C. Create a custom lookup field on the standard Product to reference the child record in the hierarchy.
- D. Create an Apex trigger to synchronize the Product Family standard picklist field on the Product object.

Answer: B

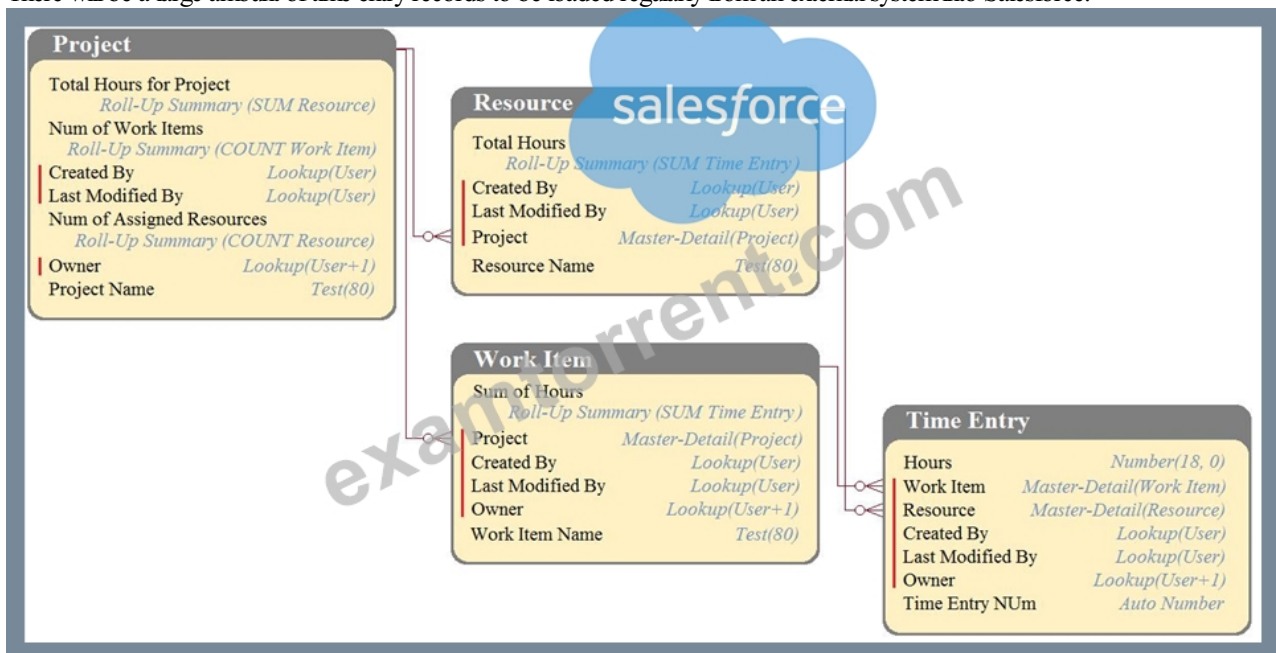

Explanation:

Creating a custom lookup field on the standard Product to reference the parent record in the hierarchy is the correct way to modify the standard Product object model to support a hierarchical data structure. This allows UC to create a self-relationship on the Product object and define parent-child relationships among products.

NEW QUESTION # 227

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Calculate summary values instead of Roll-Up by using workflow.
- B. Calculate summary values instead of Roll-Up by using triggers.
- C. Load all data using external IDs to link to parent records.
- **D. Load all data after deferring sharing calculations.**

Answer: D

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations"¹. This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity. Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be applied later². Option B is not correct because workflows are not recommended for calculating summary values, as they can cause performance issues and data skew³. Option C is not correct because triggers are also not recommended for calculating summary values, as they can cause governor limit errors and data inconsistency. Option D is not correct because external IDs are used to link records from different systems, not to improve data loading performance.

NEW QUESTION # 228

Northern Trail Outfitters (NTO) wants to capture a list of customers that have bought a particular product.

The solution architect has recommended to create a custom object for product, and to create a lookup relationship between its customers and its products.

Products will be modeled as a custom object (NTO_Product__c) and customers are modeled as person accounts. Every NTO product may have millions of customers looking up a single product, resulting in a lookup skew.

What should a data architect suggest to mitigate Issues related to lookup skew?

- A. Create multiple similar products and distribute the skew across those products.
- B. Select Clear the value of this field option while configuring the lookup relationship.
- C. Create a custom object to maintain the relationship between products and customers.
- D. Change the lookup relationship to master-detail relationship.

Answer: A

Explanation:

creating multiple similar products and distributing the skew across those products can be a way to mitigate issues related to lookup skew. The article explains that lookup skew happens when a very large number of records are associated with a single record in the lookup object, and this can cause record locking and performance issues. The article suggests creating multiple copies of the same product record and assigning different child records to each copy, so that the number of child records per parent record is reduced.

NEW QUESTION # 229

Universal Containers (UC) is transitioning from Classic to Lightning Experience.

What does UC need to do to ensure users have access to its notices and attachments in Lightning Experience?

- A. Add Notes and Attachments Related List to page Layout in Lightning Experience.
- B. Manually upload Attachments in Lightning Experience.
- C. Migrate Notes and Attachment to Enhanced Notes and Files a migration tool
- D. Manually upload Notes in Lightning Experience.

Answer: C

Explanation:

The correct answer is C, migrate Notes and Attachment to Enhanced Notes and Files using a migration tool.

Enhanced Notes and Files are the new features in Lightning Experience that replace the classic Notes and Attachments. They offer more functionality and security than the classic version. To access them in Lightning Experience, you need to migrate your existing Notes and Attachments using a migration tool provided by Salesforce. Adding Notes and Attachments Related List, manually uploading Notes or Attachments, or doing nothing are not valid solutions, as they will not enable you to use the enhanced features in Lightning Experience.

NEW QUESTION # 230

Northern trail Outfitters (NTO) runs its entire out of an enterprise data warehouse (EDW), NTD's sales team starting to use Salesforce after a recent implementation, but currently lacks data required to advanced and opportunity to the next stage.

NTO's management has research Salesforce Connect and would like to use It to virtualize and report on data from the EDW within Salesforce. NTO will be running thousands of reports per day across 10 to 15 external objects.

What should a data architect consider before implementing Salesforce Connect for reporting?

- A. Maximum external objects per org
- B. Maximum page size for server-driven paging
- C. Maximum number for records returned
- D. OData callout limits per day

Answer: D

Explanation:

According to the Salesforce Connect Reporting blog post, one of the considerations for using Salesforce Connect for reporting is the OData callout limits per day. The blog post states that "Salesforce Connect has a limit of 100,000 callouts per day. This limit is shared across all external data sources in your org. If you exceed this limit, you will receive an error message and no more callouts

will be allowed until the next day." Therefore, a data architect should consider this limit before implementing Salesforce Connect for reporting.
