## EMC Dell VxRail Design Sample Questions (Q48-Q53):

### NEW QUESTION # 48

A customer is planning to expand an existing VxRail vSAN cluster. Their current rack is full, so the cluster has to expand to an additional rack. Due to networking requirements, each rack is a Layer 2 boundary, so the new nodes require new management, vSAN, and vMotion subnets.

When designing the solution, what are two considerations that the architect should consider? (Choose two.)

- A. VMware Cloud Foundation is not supported.
- B. Automatic node discovery is not supported; manual discovery must be used.
- C. vSAN ESA is not supported. Only vSAN OSA is supported.
- D. VxRail Manager must remain in the first rack.

Answer: B,D

Explanation:

Because each rack is a Layer 2 boundary with different subnets, automatic node discovery is not supported, so manual discovery is required.

VxRail Manager must remain in the original rack to maintain cluster management continuity across racks.
