You can use this software without an active internet connection.

Huawei HCSP-Presales-Government Public Services V1.0 Sample Questions (Q200-Q205):

NEW QUESTION # 200

The City IOClined-commandsolution enables cross-region, cross-level, and cross-department collaboration and command. Whichadministrative levelsare included in these "levels"?

- A. District level
- B. County level
- C. City (municipal) level
- D. Sub-district (street) level

Answer: A,B,C,D

Explanation:

Linked command spans from municipal top-level down to district, county, and street/sub-district levels, ensuring a full vertical chain for coordination and response.

NEW QUESTION # 201

What value does a City IOC actually bring to a city?

- A. Strengthens city emergency-command capability
- B. Promotes scientific decision-making
- C. Enhances city comprehensive-governance capability
- D. Improves city operation-monitoring level

Answer: A,B,C,D

Explanation:

IOC integrates real-time monitoring, cross-department coordination, emergency command, and big-data- based decision support, thus improving monitoring, governance, emergency response, and policymaking.

NEW QUESTION # 202

The Linked Command Platform provides unified scheduling and management of full communication capabilities such as voice, conferencing, and monitoring.

- A. False
- B. True

Answer: B

Explanation:

According to public safety standards (GB/T 38121-2019), emergency command systems must integrate voice, video, and monitoring channels under unified scheduling. The description perfectly matches this "all- communication coordination" requirement.

NEW QUESTION # 203

Government office PCs use which technology to achieve terminal network and data isolation, prohibit cross- network access, prevent jump-board (pivot) attacks, and ensure 100% compliant terminal access?

- A. Mobile sandbox
- B. Permission control
- C. Terminal environment awareness
- D. One machine for dual use

Answer: D

Explanation:

"One machine for dual use" uses dual NICs, virtualization, or physical switching to create independent network environments on a single device, thereby isolating networks and blocking cross-network paths that could be used for jump-board attacks. Terminal environment awareness, permission control, and sandboxes improve security but do not by themselves guarantee strict network-boundary isolation.

NEW QUESTION # 204

Which of the following belongs to a "peacetime" scenario for linked (joint) handling?
