

ISACA CDPSE Latest Exam Pattern - CDPSE Interactive Course

2026 Latest Practice VCE CDPSE PDF Dumps and CDPSE Exam Engine Free Share: https://drive.google.com/open?id=16Ut8fvHHwlo-9d9P_Th4TTPP_7leAVQQ

Our CDPSE study materials have three versions which are versions of PDF, Software/PC, and APP/Online. Each format has distinct strength and shortcomings. We have printable PDF format that you can study our CDPSE training engine anywhere and anytime since it is printable. We also have installable Software version which is equipped with simulated real exam environment. And the APP online version of our CDPSE Exam Dumps can support all kinds of electronic devices.

ISACA CDPSE or Certified Data Privacy Solutions Engineer exam is a certification exam that is designed to test the knowledge and skills required to implement and manage data privacy solutions for organizations. Certified Data Privacy Solutions Engineer certification is ideal for professionals who are responsible for ensuring data privacy compliance within their organization, such as IT managers, security analysts, and data protection officers.

The CDPSE Certification is an essential credential for professionals who are looking to advance their careers in the field of data privacy. It demonstrates a candidate's expertise in data privacy management and compliance, and provides them with the knowledge and skills needed to protect sensitive information and mitigate data breaches.

CDPSE Interactive Course - CDPSE Exam Fees

We provide you with free demo to have a try before buying CDPSE training materials, so that you can have a better understanding of what you are going to buy. If you are content with the CDPSE exam dumps after trying, you just need to add them to your cart, and pay for them. You will get the downloading link within ten minutes. If you don't receive, just contact with us, we have professional staff solve the problem for you. What's more, CDPSE Training Materials contain both questions and answers, and it's convenient for you to check the answers after practicing.

ISACA CDPSE (Certified Data Privacy Solutions Engineer) exam is designed to evaluate the competence of professionals in the field of data privacy solutions engineering. It is an internationally recognized certification that ensures the individual's skills and knowledge in the increasingly important field of data privacy. CDPSE Exam assesses the individual's ability to design, implement, and manage data privacy solutions in accordance with industry standards and regulations.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q143-Q148):

NEW QUESTION # 143

Which of the following would MOST effectively reduce the impact of a successful breach through a remote access solution?

- A. Regular physical and remote testing of the incident response plan
- **B. Compartmentalizing resource access**
- C. Regular testing of system backups

- D. Monitoring and reviewing remote access logs

Answer: B

Explanation:

Compartmentalizing resource access is a security technique that divides a system or network into separate segments or zones with different levels of access and control, based on the sensitivity and value of the data or resources. Compartmentalizing resource access would most effectively reduce the impact of a successful breach through a remote access solution, as it would limit the scope and extent of the breach, and prevent unauthorized access to other segments or zones that contain more critical or sensitive data or resources. The other options are not as effective as compartmentalizing resource access in reducing the impact of a successful breach through a remote access solution. Regular testing of system backups is a security technique that verifies the availability and recoverability of data in case of a system failure or disaster, but it does not prevent or limit unauthorized access to data. Monitoring and reviewing remote access logs is a security technique that records and analyzes the activities and events related to remote access sessions, but it does not prevent or limit unauthorized access to data. Regular physical and remote testing of the incident response plan is a security technique that evaluates and improves the readiness and effectiveness of an organization's response to security incidents, but it does not prevent or limit unauthorized access to data1, p. 91-92 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 144

Which of the following is the BEST control to secure application programming interfaces (APIs) that may contain personal information?

- A. Requiring nondisclosure agreements (NDAs) when sharing APIs
- **B. Restricting access to authorized users**
- C. Encrypting APIs with the organization's private key
- D. Sharing only digitally signed APIs

Answer: B

Explanation:

Restricting access to authorized users is the best control to secure application programming interfaces (APIs) that may contain personal information, as it would prevent unauthorized access, modification or disclosure of the personal information by third parties or intermediaries. Restricting access to authorized users can be achieved by using various methods, such as authentication, authorization, encryption, tokens or certificates. The other options are not effective controls to secure APIs that may contain personal information. Encrypting APIs with the organization's private key is not a feasible or desirable method, as it would make the APIs unreadable by anyone who does not have the corresponding public key, which would defeat the purpose of using APIs for interoperability and integration. Requiring nondisclosure agreements (NDAs) when sharing APIs is not a reliable or enforceable method, as it would depend on the compliance and cooperation of the parties who receive the APIs, and it would not prevent unauthorized access, modification or disclosure of the personal information by third parties or intermediaries who are not bound by the NDAs. Sharing only digitally signed APIs is not a sufficient method, as it would only ensure the authenticity and integrity of the APIs, but it would not prevent unauthorized access, modification or disclosure of the personal information by third parties or intermediaries who can read or intercept the APIs1, p. 90-91 Reference: 1: CDPSE Review Manual (Digital Version)

NEW QUESTION # 145

Which of the following is the BEST way to ensure an organization's enterprise risk management (ERM) framework can protect the organization from privacy harms?

- A. Include privacy risks as a risk category.
- B. Conduct an internal privacy audit.
- **C. Complete a privacy risk assessment.**
- D. Establish a privacy incident response plan.

Answer: C

Explanation:

Explanation

The best way to ensure an organization's enterprise risk management (ERM) framework can protect the organization from privacy harms is to complete a privacy risk assessment. A privacy risk assessment is a systematic process of identifying, analyzing, evaluating, and treating the privacy risks that may affect the organization's objectives, operations, stakeholders, and reputation. A

privacy risk assessment helps to align the ERM framework with the privacy requirements, expectations, and obligations of the organization, as well as to prioritize and mitigate the privacy risks that may cause privacy harms. Privacy harms are the adverse consequences or impacts that may result from the unauthorized or inappropriate use, disclosure, or loss of personal data, such as financial loss, identity theft, discrimination, reputational damage, emotional distress, or physical harm.

NEW QUESTION # 146

Which cloud deployment model is BEST for an organization whose main objectives are to logically isolate personal data from other tenants and adopt custom privacy controls for the data?

- A. Public cloud
- B. Community cloud
- C. Private cloud
- D. Hybrid cloud

Answer: C

Explanation:

Explanation

A private cloud is a cloud deployment model that provides exclusive access and control to a single organization or a specific group of users within the organization. A private cloud is best for an organization whose main objectives are to logically isolate personal data from other tenants and adopt custom privacy controls for the data, as it offers the highest level of security, privacy, and customization among the cloud deployment models. A private cloud allows the organization to implement its own privacy policies, standards, and procedures for the personal data, as well as to configure the cloud infrastructure, services, and applications according to its specific needs and preferences. A private cloud also reduces the risk of data breaches, unauthorized access, or co-mingling of data from other tenants, as the personal data is stored and processed in a dedicated and isolated environment.

NEW QUESTION # 147

When using anonymization techniques to prevent unauthorized access to personal data, which of the following is the MOST important consideration to ensure the data is adequately protected?

- A. The data must be stored in locations protected by data loss prevention (DLP) technology.
- B. The key must be kept separate and distinct from the data it protects.
- C. The data must be protected by multi-factor authentication.
- D. The key must be a combination of alpha and numeric characters.

Answer: B

Explanation:

Anonymization is a technique that removes or modifies personal data in such a way that it can no longer be attributed to a specific data subject. Anonymization can be achieved by various methods, such as encryption, pseudonymization, aggregation, generalization, etc. When using anonymization techniques to prevent unauthorized access to personal data, the most important consideration to ensure the data is adequately protected is that the key must be kept separate and distinct from the data it protects. The key is a piece of information that is used to reverse the anonymization process and restore the original personal data. The key must be stored and managed in a secure location that is different from where the anonymized data is stored and processed. This way, even if the anonymized data is compromised, the key cannot be accessed or used to re-identify the data subjects. Reference: : CDPSE Review Manual (Digital Version), page 29
