While working on generating a concise response to a user prompt, you notice that the generative AI model in IBM watsonx is producing excessively long outputs. You want to ensure that the response is informative but doesn't exceed a specific length. Which of the following parameters should you adjust, and what is the most appropriate value to achieve a concise output without cutting off essential information?

- A. Set max\_tokens to 1000
- B. Set max\_tokens to 10
- C. Set max\_tokens to 5

- D. Set `max_tokens` to 100

**Answer: D**

#### NEW QUESTION # 287

You are working with a foundation model pre-trained on a large general-purpose dataset, and you plan to deploy it for a specialized task in healthcare-related text generation. However, before tuning the model, you want to assess whether tuning is necessary for your use case.

Which of the following is the best indicator that it is time to tune the foundation model for your task?

- A. The model's inference time is longer than expected, and you need to reduce latency for real-time applications.
- B. The model performs well on general datasets but fails to capture specific domain-related terminology and context.
- C. You are noticing that the model occasionally makes grammar mistakes in the generated text.
- D. The model's accuracy is already above 90%, but you want to achieve 95% accuracy for your task.

**Answer: B**

#### NEW QUESTION # 288

A team is fine-tuning a large language model (LLM) for a healthcare application. They have decided to implement a taxonomy tree-based curation to prepare their dataset of medical records and patient interactions.

What is the primary benefit of using a taxonomy tree in the curation process for such a model?

- A. It eliminates the need for data cleaning and preprocessing since the taxonomy provides the structure.
- B. It reduces the overall size of the dataset by filtering out irrelevant data.
- C. It ensures that the model only focuses on specific medical specialties by eliminating other categories.
- D. It provides a hierarchical structure that helps the model understand the relationships between different medical concepts.

**Answer: D**

#### NEW QUESTION # 289

You are developing a tuned language model for a healthcare chatbot that provides concise responses to patient inquiries. Using Tuning Studio, you want to ensure the model is well-optimized for generating responses specific to medical terminology while maintaining efficiency.

Which of the following represents the correct workflow to create a tuned model using Tuning Studio?

- A. Load the model, automatically adjust its architecture, and deploy it to production.
- B. Select a pre-trained model, upload the custom medical dataset, fine-tune the hyperparameters, and evaluate the model's performance.
- C. Input the dataset, manually adjust the learning rate and batch size, and export the fine-tuned model without evaluation.
- D. Select a model, upload the dataset, and let Tuning Studio automatically generate synthetic data to improve model training.

**Answer: B**

#### NEW QUESTION # 290

IBM Watsonx Tuning Studio provides metering options to help monitor and optimize fine-tuning processes.

Which of the following best describes how these metering options can optimize resource usage during fine-tuning?

- A. Fine-tuning metering provides insights into token usage and computational costs, allowing users to set budget constraints and minimize expenses during the tuning process.
- B. Fine-tuning metering enables hyperparameter search, automatically testing multiple configurations to find the most optimal one for the current task.
- C. Fine-tuning metering options automatically halt the training process if no significant improvements in model accuracy are observed, reducing unnecessary resource usage.
- D. Fine-tuning metering adjusts the learning rate dynamically to optimize both training speed and accuracy.

**Answer: A**
