

PCA Exam Study Questions & PCA Vce Training Material & PCA Latest Pdf Vce

PCA Study Exam Laws And Regulations Questions With 100% Correct Answers 2025/2026 | Verified And Updated

The difference between California laws and DPR regulations is that laws are

- A. Passed by County Agricultural Commissioners and regulations are passed by the California legislature
- B. Passed by the California legislature and regulations are adopted by DPR to carry out the laws
- C. Supplements to federal regulations
- D. Adopted by DPR to carry out regulations signed by the Governor - answer-b

Which of the following is not one of the purposes of California's pesticide and pest control laws and regulations?

- A. Protecting workers from pesticide exposure
- B. Providing proper, safe, and effective use of pesticides
- C. Encouraging people to use more pesticides
- D. Protecting public health and safety - answer-c

BONUS!!! Download part of TestPassKing PCA dumps for free: <https://drive.google.com/open?id=1wjbiXN2590p4W7U81vYd8fddzrdRpLMV>

As long as you study with our PCA training braindump, then you will find that it is designed to deepened the understanding of the users and memory. Simple text messages, deserve to go up colorful stories and pictures beauty, make the PCA test guide better meet the zero basis for beginners, let them in the relaxed happy atmosphere to learn more useful knowledge, more good combined with practical, so as to achieve the state of unity. It is easy to pass with our PCA Practice Questions as our pass rate of PCA exam material is more than 98%.

We have three formats of study materials for your leaning as convenient as possible. Our Cloud & Containers question torrent can simulate the real operation test environment to help you pass this test. You just need to choose suitable version of our PCA guide question you want, fill right email then pay by credit card. It only needs several minutes later that you will receive products via email. After your purchase, 7*24*365 Day Online Intimate Service of PCA question torrent is waiting for you. We believe that you don't encounter failures anytime you want to learn our PCA guide torrent.

Dumps Linux Foundation PCA Reviews - PCA Real Exam Answers

Everything will be changed if you buy our PCA actual study guide, and you will be surprised with not only high grades but also the certification that you got for the help of our PCA exam questions. As you know, salaries are commensurate to skills while certificates represent skills. Therefore, you are sure to get high salaries with certification after using our PCA Test Torrent. Last but not the least, after you enter into large companies with PCA certification, you can get to know more competent people, which can certainly enlarge your circle of friends.

Linux Foundation Prometheus Certified Associate Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

How would you name a metric that measures gRPC response size?

- A. `grpc_response_size_bytes`
- B. `grpc_response_size_total`
- C. `grpc_response_size`
- D. `grpc_response_size_sum`

Answer: A

Explanation:

Following Prometheus's metric naming conventions, every metric should indicate:

What it measures (the quantity or event).

The unit of measurement in base SI units as a suffix.

Since the metric measures response size, the base unit is bytes. Therefore, the correct and compliant metric name is:

`grpc_response_size_bytes`

This clearly communicates that it measures gRPC response payload sizes expressed in bytes.

The `_bytes` suffix is the Prometheus-recommended unit indicator for data sizes. The other options violate naming rules:

`_total` is reserved for counters.

`_sum` is used internally by histograms or summaries.

Omitting the unit (`grpc_response_size`) is discouraged, as it reduces clarity.

Reference:

Extracted and verified from Prometheus documentation - Metric Naming Conventions, Instrumentation Best Practices, and Standard Units for Size and Time Measurements.

NEW QUESTION # 21

Given the metric `prometheus_tsdb_lowest_timestamp_seconds`, how do you know in which month the lowest timestamp of your Prometheus TSDB belongs?

- A. `(time() - prometheus_tsdb_lowest_timestamp_seconds) / 86400`
- B. `format_date(prometheus_tsdb_lowest_timestamp_seconds, "%M")`
- C. `prometheus_tsdb_lowest_timestamp_seconds % month`
- D. `month(prometheus_tsdb_lowest_timestamp_seconds)`

Answer: A

Explanation:

The metric `prometheus_tsdb_lowest_timestamp_seconds` provides the oldest stored sample timestamp in Prometheus's local TSDB (in Unix epoch seconds). To determine the age or approximate date of this timestamp, you compare it with the current time (using `time()` in PromQL).

The expression:

`(time() - prometheus_tsdb_lowest_timestamp_seconds) / 86400`

converts the difference between the current time and the oldest timestamp from seconds into days (1 day = 86,400 seconds). This gives the number of days since the earliest sample was stored, allowing you to infer the time range and approximate month manually.

The other options are invalid because PromQL does not support direct date formatting (`format_date`) or `month()` extraction functions.

Reference:

Extracted and verified from Prometheus documentation - TSDB Internal Metrics, Time Functions in PromQL, and Using `time()` for Relative Calculations.

NEW QUESTION # 22

Which of the following metrics is unsuitable for a Prometheus setup?

- A. `http_response_total{handler="static/*filepath"}`
- B. `user_last_login_timestamp_seconds{email="john.doe@example.com"}`
- C. `promhttp_metric_handler_requests_total{code="500"}`
- D. `prometheus_engine_query_log_enabled`

Answer: B

Explanation:

The metric `user_last_login_timestamp_seconds{email="john.doe@example.com"}` is unsuitable for Prometheus because it includes a high-cardinality label (email). Each unique email address would generate a separate time series, potentially numbering in the millions, which severely impacts Prometheus performance and memory usage.

Prometheus is optimized for low- to medium-cardinality metrics that represent system-wide behavior rather than per-user data.

High-cardinality metrics cause data explosion, complicating queries and overwhelming the storage engine.

By contrast, the other metrics-`prometheus_engine_query_log_enabled`, `promhttp_metric_handler_requests_total{code="500"}`, and `http_response_total{handler="static/*filepath"}`-adhere to Prometheus best practices. They represent operational or service-level metrics with limited, manageable label value sets.

Reference:

Extracted and verified from Prometheus documentation - Metric and Label Naming Best Practices, Cardinality Management, and Anti-Patterns for Metric Design sections.

NEW QUESTION # 23

What is the maximum number of Alertmanagers that can be added to a Prometheus instance?

- A. 0
- B. 1
- C. More than 3
- D. 2

Answer: C

Explanation:

Prometheus supports integration with multiple Alertmanager instances for redundancy and high availability. The alerting section of the Prometheus configuration file (`prometheus.yml`) allows specifying a list of Alertmanager targets, enabling Prometheus to send alerts to several Alertmanager nodes simultaneously.

There is no hard-coded limit on the number of Alertmanagers that can be added. The typical best practice is to run a minimum of three Alertmanagers in a clustered setup to achieve fault tolerance and ensure reliable alert delivery, but Prometheus can be configured with more than three if desired.

Each Alertmanager node in the cluster communicates state information (active, silenced, inhibited alerts) with its peers to maintain consistency.

Reference:

Verified from Prometheus documentation - Alertmanager Integration, High Availability Setup, and Prometheus Configuration - alerting Section.

NEW QUESTION # 24

How can you send metrics from your Prometheus setup to a remote system, e.g., for long-term storage?

- A. With "federation"
- B. With "remote write"
- C. With S3 Buckets
- D. With "scraping"

Answer: B

Explanation:

Prometheus provides a feature called Remote Write to transmit scraped and processed metrics to an external system for long-term storage, aggregation, or advanced analytics. When configured, Prometheus continuously pushes time series data to the remote

endpoint defined in the remote_write section of the configuration file.

This mechanism is often used to integrate with long-term data storage backends such as Cortex, Thanos, Mimir, or InfluxDB, enabling durable retention and global query capabilities beyond Prometheus's local time series database limits.

In contrast, "scraping" refers to data collection from targets, while "federation" allows hierarchical Prometheus setups (pulling metrics from other Prometheus instances) but does not serve as long-term storage. Using "S3 Buckets" directly is also unsupported in native Prometheus configurations.

Reference:

Extracted and verified from Prometheus documentation - Remote Write/Read APIs and Long-Term Storage Integrations sections.

NEW QUESTION # 25

.....

You may be given the Linux Foundation PCA practice exam results as soon as they have been saved in the software. TestPassKing modified Linux Foundation PCA exam dumps allow students to learn effectively about the real Linux Foundation PCA Certification Exam. Linux Foundation PCA practice exam software allows students to review and refine skills in a preceding test setting.
