Oracle Cloud Infrastructure 2024 Application Integration Professional (1Z0-1042-24)

1. As an integration developer, you are creating an integration in Oracle Integration Cloud (OIC) to transform a payload with multiple orders. You need to configure the for-each action to loop through each order and process them individually.

How do you correctly configure for the for-each action to support this scenario?

- Select the Group By option and group the orders by the order number.
- Select the Parallel Processing option and set the number of threads to the number of orders.
- Select the Sequential Processing option and set the batch size to the number of orders.
- Select the Repeating Element field and map the source element that contains the orders.

2. What is the purpose of adding and configuring a Wait action in a schedule pattern integration flow?

- It is used to configure a global variable for delay settings.
- It is used to trigger an error after a specified duration.
- It can be configured to loop through elements until a condition is met.
- It is used to suspend processing within the integration flow.
- It is used to schedule integration runs at specific times.

3) Which of these tasks are NOT required to implement a Pub/Sub (publish-subscribe) solution in Oracle Integration (OIC)? (Double Check Answer)

- Create a defined Event which must use the JSON format.
- Add and configure a Publish event action within an integration flow.
- Define an Event adapter connection.
- Create an Event pattern Integration selecting an Event as the trigger.

4) Which two are valid considerations when leveraging the Oracle Integration Cloud (OIC) connectivity agent for higher availability on-premise environments?

- You should install the connectivity agent on the same host as the target application, then specify different agent group identifiers for each agent its installation.
- The File Adapter is not supported in high availability environments. When using the File Adapter and if some groups have multiple instances, use a dedicated agent group (with one group agent only).
