AWS® Certified
Solutions Architect
OFFICIAL STUDY GUIDE

ASSOCIATE EXAM

Covers exam objectives, including designing
highly available, cost-efficient, fault-tolerant, scalable
systems, implementation and deployment, data
security, troubleshooting, and much more...
includes interactive online learning environment
and study tools with:
• 2 custom practice exams
• More than 100 electronic flashcards
• Searchable key term glossary

TorrentValid provide you with the comprehensive Amazon AWS-Solutions-Architect-Associate Exam information to help you to succeed. Our training materials are the latest study materials which bring by experts. We help you achieve your success. You can get the most detailed and accurate exam questions and answers from us. Our Training Tools are updated in a timely manner in accordance with the changing of Exam Objectives. In fact, the success is not far away, go down along with TorrentValid, then you will come to the road to success.

The AWS-Solutions-Architect-Associate exam covers a wide range of topics such as designing and deploying scalable, highly available, and fault-tolerant systems on AWS, selecting the appropriate AWS services to meet an organization's needs, and estimating AWS costs and identifying cost control mechanisms. AWS-Solutions-Architect-Associate exam also tests the candidate's ability to design and deploy secure applications and infrastructure on AWS and implement best practices for security and compliance. The AWS-Solutions-Architect-Associate Certification is a great way to validate your cloud computing skills and gain recognition as an AWS-certified professional.

Pass-Sure Exam AWS-Solutions-Architect-Associate Discount & Passing

AWS-Solutions-Architect-Associate Exam is No More a Challenging Task

We have professional technicians to check the website every day, and you can have a clean and safe online shopping environment if you purchasing AWS-Solutions-Architect-Associate learning materials from us. In addition, we are pass guarantee and money back guarantee for AWS-Solutions-Architect-Associate exam dumps, and if you fail to pass the exam, we will give you full refund. We have free demo for you to have a try before buying AWS-Solutions-Architect-Associate Exam Materials of us, so that you can know what the complete version is like. We have online and offline service, and if you have any questions for AWS-Solutions-Architect-Associate exam dumps, you can consult us.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q452-Q457):

NEW QUESTION # 452
The application tier for a workload runs on EC2 instances that are unevenly distributed across two Availability Zones. The instances are behind a Network Load Balancer and are accessed through layer 4 TCP connections.
The instances in the lesser populated Availability Zone are failing as the result of high CPU utilization.
Which configuration change can help mitigate the issue?

- A. Switch to using an Application Load Balancer and enable sticky sessions
- B. Modify the Network Load Balance to enable cross-zone load balancing
- C. Modify the Network Load Balancer to enable sticky sessions
- D. Switch to using an Application Load Balancer and enable cross-zone load balancing

Answer: D

NEW QUESTION # 453
A company is running a commercial Apache Hadoop cluster on Amazon EC2. This cluster is being used daily to query large files on Amazon S3. The data on Amazon S3 has been curated and does not require any additional transformations steps. The company is using a commercial business intelligence (BI) tool on Amazon EC2 to run queries against the Hadoop cluster and visualize the data. The company wants to reduce or eliminate the overhead costs associated with managing the Hadoop cluster and the BI tool. The company would like to move to a more cost-effective solution with minimal effort. The visualization is simple and requires performing some basic aggregation steps only.
Which option will meet the company's requirements?

- A. Develop a script that uses Amazon Athena to query and analyze the files on Amazon S3. Then use Amazon QuickSight to connect to Athena and perform the visualization.
- B. Develop a stored procedure invoked from a MySQL database running on Amazon EC2 to analyze the files in Amazon S3. Then use a fast in-memory BI tool running on Amazon EC2 to visualize the data.
- C. Launch a transient Amazon EMR cluster daily and develop an Apache Hive script to analyze the files on Amazon S3. Shut down the Amazon EMR cluster when the job is complete. Then use Amazon QuickSight to connect to Amazon EMR and perform the visualization.
- D. Use a commercial extract, transform, load (ETL) tool that runs on Amazon EC2 to prepare the data for processing. Then switch to a faster and cheaper BI tool that runs on Amazon EC2 to visualize the data from Amazon S3.

Answer: A

Explanation:
Explanation

NEW QUESTION # 454
You have a periodic Image analysis application that gets some files In Input analyzes them and tor each file writes some data in output to a ten file the number of files in input per day is high and concentrated in a few hours of the day.
Currently you have a server on EC2 with a large EBS volume that hosts the input data and the results it takes almost 20 hours per day to complete the process
What services could be used to reduce the elaboration time and improve the availability of the solution?

- A. EBS with Provisioned IOPS (PIOPS) to store I/O files SOS to distribute elaboration commands to a group of hosts working in parallel Auto Scaling to dynamically size the group ot hosts depending on the length of the SQS queue.
- B. S3 to store I/O files. SQS to distribute elaboration commands to a group of hosts working in parallel. Auto scaling to dynamically size the group of hosts depending on the length of the SQS queue
- C. S3 to store I/O files, SNS to distribute evaporation commands to a group of hosts working in parallel. Auto scaling to dynamically size the group of hosts depending on the number of SNS notifications
- D. EBS with Provisioned IOPS (PIOPS) to store I/O files. SNS to distribute elaboration commands to a group of hosts working in parallel Auto Scaling to dynamically size the group of hosts depending on the number of SNS notifications

Answer: B

NEW QUESTION # 455

A weather forecasting company collects temperature readings from various sensors on a continuous basis. An existing data ingestion process collects the readings and aggregates the readings into larger Apache Parquet files. Then the process encrypts the files by using client-side encryption with KMS managed keys (CSE- KMS). Finally, the process writes the files to an Amazon S3 bucket with separate prefixes for each calendar day.

The company wants to run occasional SQL queries on the data to take sample moving averages for a specific calendar day.

Which solution will meet these requirements MOST cost-effectively?

- A. Configure Amazon Athena to read the encrypted files. Run SQL queries on the data directly in Amazon S3.
- B. Use Amazon S3 Select to run SQL queries on the data directly in Amazon S3.
- C. Configure Amazon EMR Serverless to read the encrypted files. Use Apache SparkSQL to run SQL queries on the data directly in Amazon S3.
- D. Configure Amazon Redshift to read the encrypted files Use Redshift Spectrum and Redshift query editor v2 to run SQL queries on the data directly in Amazon S3.

Answer: A

Explanation:

Amazon Athenais a serverless query service that allows you to run SQL queries directly on data stored in Amazon S3 without the need for a data warehouse. It is cost-effective because you only pay for the queries you run, and it can handleApache Parquetfiles efficiently. Additionally, Athena integrates with KMS, making it suitable for querying encrypted data.
Key AWS features:
Cost-Effective: Athena charges only for the data scanned by the queries, making it a more cost-effective solution compared to Redshift or EMR for occasional queries.
Direct S3 Querying: Athena supports querying data directly in S3, including Parquet files, without needing to move the data.
AWS Documentation: Athena's compatibility with encrypted Parquet files in S3 makes it the ideal choice for this scenario, reducing both cost and complexity.

NEW QUESTION # 456

An organization has a statutory requirement to protect the data at rest for data stored in EBS volumes.
Which of the below mentioned options can the organization use to achieve data protection?

- A. Data snapshot.
- B. All the options listed here.
- C. Data encryption.
- D. Data replication.

Answer: B

Explanation:
For protecting the Amazon EBS data at REST, the user can use options, such as Data Encryption
(Windows / Linux / third party based), Data Replication (AWS internally replicates data for redundancy), and Data Snapshot (for point in time backup).
