Microsoft AZ-104 Latest Exam Papers | AZ-104 Valid Braindumps

Planned Azure Networking Infrastructure

You plan to create the following networking resources in a resource group named All_Resources:

- Default Azure system routes that will be the only routes used to route traffic
- A virtual network named Paris-VNet that will contain two subnets named Subnet1 and Subnet2
- A virtual network named ClientResources-VNet that will contain one subnet named ClientSubnet
- A virtual network named AllOffices-VNet that will contain two subnets named Subnet3 and Subnet4

You plan to enable peering between Paris-VNet and AllOffices-VNet. You will enable the Use remote gateways setting for the Paris-VNet peerings.

You plan to create a private DNS zone named humongousinsurance.local and set the registration network to the ClientResources-VNet virtual network.

Planned Azure Computer Infrastructure

Each subnet will contain several virtual machines that will run either Windows Server 2012 R2, Windows Server 2016, or Red Hat Linux.

Department Requirements

Humongous Insurance identifies the following requirements for the company's departments:

- Web administrators will deploy Azure web apps for the marketing department. Each web app will be added to a separate resource group. The initial configuration of the web apps will be identical. The web administrators have permission to deploy web apps to resource groups.
- During the testing phase, auditors in the finance department must be able to review all Azure costs from the past week.

Authentication Requirements

Users in the Miami office must use Azure Active Directory Seamless Single Sign-on (Azure AD Seamless SSO) when accessing resources in Azure.

Question #:5 - (Exam Topic 2)

You need to define a custom domain name for Azure AD to support the planned infrastructure.

Which domain name should you use?

A. Join the client computers in the Miami office to Azure AD.

B. Add
   http://autologon.microsoftazuread-sso.com to the intranet zone of each client computer in the Miami

With the Microsoft Azure Administrator (AZ-104) web-based practice exam, you get the same features as a AZ-104 desktop practice test software. It includes real Microsoft AZ-104 exam questions to help you understand each topic. The web-based AZ-104 Practice Exam is compatible with every operating system including Mac, Linux, iOS, Windows, and Android. This Microsoft AZ-104 practice exam works fine on Chrome, Internet Explorer, Microsoft Edge, Opera, etc.

We have a group of experts dedicated to the AZ-104 exam questions for many years. And the questions and answers of our AZ-104 practice materials are closely related with the real exam. Besides, they constantly keep the updating of products to ensure the accuracy of questions. All AZ-104 Actual Exams are 100 percent assured. Besides, we price the AZ-104 actual exam with reasonable fee without charging anything expensive.

AZ-104 Valid Braindumps & Certificate AZ-104 Exam

If you are going to purchasing the AZ-104 exam bootcamp online, you may pay more attention to the pass rate. With the pass rate more than 98%, our AZ-104 exam materials have gained popularity in the international market. And we have received many good feedbacks from our customers. In addition, we offer you free demo to have a try before buying AZ-104 Exam Braindumps, so that you can have a deeper understanding of what you are going to buy. You can also enjoy free update for one year, and the update version for AZ-104 will be sent to your email automatically.

Microsoft Azure Administrator Sample Questions (Q269-Q274):

NEW QUESTION # 269
You have an Azure Active Directory (Azure AD) tenant that contains three global administrators named Admin1, Admin2, and Admin3.
The tenant is associated to an Azure subscription. Access control for the subscription is configured as shown in the Access control exhibit. (Click the Exhibit tab.)
You sign in to the Azure portal as Admin1 and configure the tenant as shown in the Tenant exhibit. (Click the Exhibit tab.)
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation
Explanation
They are all Global admins so they can all modify user permission. i.e add self as owner etc.
You can be GA in one of the subscription, it doesn't mean that you can create the resources in all subscription.
As a Global Administrator in Azure Active Directory (Azure AD), you might not have access to all subscriptions and management groups in your directory. Azure AD and Azure resources are secured independently from one another. That is, Azure AD role assignments do not grant access to Azure resources, and Azure role assignments do not grant access to Azure AD.
However, if you are a Global Administrator in Azure AD, you can assign yourself access to all Azure subscriptions and management groups in your directory Reference:
https://docs.microsoft.com/en-gb/azure/role-based-access-control/elevate-access-global-admin

NEW QUESTION # 270
You have an Azure subscription that contains the virtual networks shown in the following table.
The subscription contains the virtual machines shown in the following table.
Each virtual machine contains only a private IP address.
You create an Azure bastion for VNet1 as shown in the following exhibit.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
No
Yes
No
Azure Bastion is a fully managed platform-as-a-service (PaaS) solution that allows secure RDP (for Windows VMs) and SSH (for Linux VMs) connections directly through the Azure portal - without exposing public IP addresses. It provides browser-based connectivity over TLS from the Azure portal and uses port 443 only.
Let's analyze the scenario step by step based on the provided configuration and the Microsoft Azure Administrator documentation (AZ-104 study guide):
Network Topology Review
VNet
Location
Peered With
VNet1
East US
VNet2
VNet2
East US
VNet1, VNet3
VNet3
West US
VNet2

VM
OS
Connected To
VM1
Windows
VNet1
VM2
Linux
VNet2
VM3
Windows
VNet3
Bastion1 is deployed in VNet1, which is peered with VNet2 (but not directly with VNet3).
Statement Analysis
1. The Remote Desktop Connection client (mstsc.exe) can be used to connect to VM1 through Bastion1 Azure Bastion does not support native clients like mstsc.exe.
Bastion connections are made only via the Azure portal using web-based RDP or SSH.
The mstsc.exe client requires a direct RDP connection, which is not provided through Azure Bastion.
Answer: No
2. The Azure portal can use SSH to connect to VM2 through Bastion1
Bastion1 is deployed in VNet1, which is peered with VNet2.
Azure Bastion supports connections to peered VNets within the same region, as long as network peering allows traffic between VNets and the VM does not require a public IP.
VM2 (Linux) is connected to VNet2, which is peered with VNet1 (same region, East US).
Therefore, the Azure portal can use SSH (port 22) through Bastion1 to connect to VM2.
Answer: Yes
3. The Azure portal can be used to connect to VM3 through Bastion1
VM3 is connected to VNet3, which is in West US.
Bastion1 (in VNet1, East US) cannot connect across regions, even though VNet2 is peered with both VNet1 and VNet3.
Bastion does not support transitive peering - meaning Bastion1 cannot connect to VMs in VNets indirectly connected (VNet3 in this case).
Answer: No
Key Azure Documentation Points (Microsoft Learn Extract):
"Azure Bastion allows you to securely connect to a VM in the same virtual network or a peered virtual network in the same region."
"Bastion does not support transitive peering or connections across regions."
"Connections are made through the Azure portal only and not via native RDP or SSH clients." (Source: Microsoft Learn - Azure Bastion Overview and Connectivity Requirements)

NEW QUESTION # 271
You have an Azure subscription.
Users access the resources in the subscription from either home or from customer sites. From home, users must establish a point-to-site VPN to access the Azure resources. The users on the customer sites access the Azure resources by using site-to-site VPNs.
You have a line-of-business app named App1 that runs on several Azure virtual machine. The virtual machines run Windows Server 2016.
You need to ensure that the connections to App1 are spread across all the virtual machines.
What are two possible Azure services that you can use? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

- A. Traffic Manager
- B. an Azure Content Delivery Network (CDN)
- C. an internal load balancer
- D. a public load balancer
- E. an Azure Application Gateway

Answer: C,E

Explanation:
Explanation
Line-of-business apps means custom apps. Generally these are used by internal staff members of the company.
Azure Application Gateway is a web traffic load balancer that enables you to manage traffic to your web applications.

Internal Load Balancer provides a higher level of availability and scale by spreading incoming requests across virtual machines (VMs) within the virtual network.
Reference:
https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-overview
https://docs.microsoft.com/en-us/azure/application-gateway/overview

NEW QUESTION # 272

You create a Recovery Services vault backup policy named Policy1 as shown in the following exhibit.

Answer:

Explanation:

NEW QUESTION # 273

You have an Azure subscription named Subscroption1.
In Subscription1, you create an alert rule named Alert1.
The Alert1 action group is configured as shown in the following exhibit.

Alert1 alert criteria is triggered every minute.
Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
