

Exam NSE7_CDS_AR-7.6 Guide Materials, NSE7_CDS_AR-7.6 Dumps Free Download

Fortinet NSE 7 - Enterprise Firewall 6.2

- Exam series: NSE7_EFW-6.2
- Number of questions: 30
- Exam time: 60 minutes
- Language: English and Japanese
- Product version: FortiOS 6.2
- Status: Registration ends May 15, 2021

Fortinet NSE 7 - Secure Access 6.2

- Exam series: NSE7_SAC-6.2
- Number of questions: 30
- Exam time: 60 minutes
- Language: English and Japanese
- Product version: FortiOS 6.2
- Status: Available until July 31, 2021

Fortinet NSE 7 - Public Cloud Security 6.0

- Exam series: NSE7_PBC-6.0
- Number of questions: 30
- Exam time: 60 minutes
- Language: English
- Product version: FortiOS 6.0, FortiWeb 6.0
- Status: Available until July 31, 2021
- Exam details: [exam description](#)

Fortinet NSE 7 - Advanced Threat Protection 3.0

- Exam series: NSE7_ATP-3.0
- Number of questions: 30
- Exam time: 60 minutes
- Language: English and Japanese
- Product version: FortiSandbox 3.0
- Status: Available until August 31, 2021

The Fortinet NSE 7 - Public Cloud Security 7.6 Architect NSE7_CDS_AR-7.6 certification provides both novices and experts with a fantastic opportunity to show off their knowledge of and proficiency in carrying out a particular task. With the Fortinet NSE7_CDS_AR-7.6 exam, you will have the chance to update your knowledge while obtaining dependable evidence of your proficiency. You can also get help from actual Fortinet NSE 7 - Public Cloud Security 7.6 Architect NSE7_CDS_AR-7.6 Exam Questions and pass your dream Fortinet NSE 7 - Public Cloud Security 7.6 Architect NSE7_CDS_AR-7.6 certification exam.

The latest NSE7_CDS_AR-7.6 dumps collection covers everything you need to overcome the difficulty of real questions and certification exam. Accurate NSE7_CDS_AR-7.6 test answers are tested and verified by our professional experts with the high technical knowledge and rich experience. You may get answers from other vendors, but our NSE7_CDS_AR-7.6 briandumps pdf are the most reliable training materials for your exam preparation.

Download the Fortinet NSE7_CDS_AR-7.6 Exam Dumps Now

Persistence and proficiency made our experts dedicated in this line over so many years. Their passing rates are over 98 and more, which is quite riveting outcomes. After using our NSE7_CDS_AR-7.6 practice materials, you will have instinctive intuition to conquer all problems and difficulties in your review. We are sure you can see great deal of knowledge from our NSE7_CDS_AR-7.6 practice materials in preference to other materials obviously. These NSE7_CDS_AR-7.6 practice materials have variant kinds including PDF, app and software versions.

Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q24-Q29):

NEW QUESTION # 24

Your monitoring team reports performance issues with a web application hosted in Azure. You suspect that the bottleneck might be due to unexpected inbound traffic spikes.

Which method should you use to identify and analyze the traffic pattern?

- A. Enable NSG Flow Logs and analyze logs with Azure Monitor.
- B. Use Azure Traffic Manager to visualize all traffic to the application.
- C. Enable Azure DDoS protection to prevent inbound traffic spikes.
- **D. Deploy Azure Firewall to log traffic by IP address.**

Answer: D

Explanation:

According to the FortiOS 7.6 Azure Administration Guide and the Fortinet 7.4 Public Cloud Security documentation regarding monitoring and troubleshooting in Microsoft Azure, administrators must utilize native diagnostic tools to gain visibility into network traffic patterns:

* NSG Flow Logs (Option D): Network Security Group (NSG) flow logs are a feature of Azure Network Watcher that allows you

to record information about IP traffic flowing through an NSG. These logs capture critical 5-tuple information (source/destination IP, port, and protocol) and whether the traffic was allowed or denied by specific security rules.

* Traffic Pattern Analysis with Azure Monitor: To effectively analyze the "pattern" of a traffic spike, these logs are typically sent to a Log Analytics workspace within Azure Monitor. By using Traffic Analytics, the raw flow data is processed into rich visualizations and searchable datasets. This allows administrators to run Kusto Query Language (KQL) queries to identify "top talkers," visualize traffic spikes over time, and correlate the timing of these spikes with application performance degradation.

* Identifying Bottlenecks: This method is preferred for identifying bottlenecks because it provides a granular view of every packet entering or leaving the subnets where the FortiGate-VM or application servers are hosted, revealing the exact nature of the inbound volume.

Why other options are incorrect:

* Option A: While Azure Firewall provides logging, it is an additional security layer that may not be deployed in all environments.

NSG Flow Logs are the primary and more ubiquitous method for monitoring all subnet-level traffic regardless of firewall placement.

* Option B: DDoS Protection is a preventative measure; it does not provide the historical "identification and analysis" of traffic patterns required to diagnose a past performance bottleneck.

* Option C: Azure Traffic Manager is a DNS-based load balancer. While it provides high-level metrics, it does not have visibility into the actual flow-level traffic data needed for a detailed pattern analysis of application bottlenecks.

NEW QUESTION # 25

A DevOps team is using Terraform to manage their infrastructure across multiple environments.

Currently, the Terraform state file is stored locally on a developer's machine. The team decides to migrate the state file to a remote back-end machine.

Why is storing the Terraform state file in a remote location considered a best practice in this scenario?

- A. It enables collaboration among multiple team members.
- B. It eliminates the need to define provider configurations in the state file.
- C. It ensures that the state file is encrypted.
- D. It prevents the accidental deletion of the state file.

Answer: A

NEW QUESTION # 26

Refer to the exhibit.

Terraform configuration

```
#Azure:~/FCSS/terraform/Troubleshooting$ terraform plan
```

```
Error: building account: getting authenticated object ID: listing Service Principals: ServicePrincipalsClient.BaseClient.Get(): clientCredentialsToken: received HTTP status 400 with response: {"error": "invalid_request", "error_description": "AADSTS90002: Tenant '942b80cd-1b14-42a1-8def-4b21dece61bb' not found. Check to make sure you have the correct tenant ID and are signing into the correct cloud. Check with your subscription administrator, this may happen if there are no active subscriptions for the tenant.\r\nTrace ID: fb39a7b9-1dc9-4d3f-a6c8-7f0569cf5600\r\nCorrelation ID: 81872e60-4daf-472a-967b-69960d36b66e\r\nTimestamp: 2022-09-14 19:53:26Z", "error_codes": [90002], "timestamp": "2022-09-14 19:53:26Z", "trace_id": "fb39a7b9-1dc9-4d3f-a6c8-7f0569cf5600", "correlation_id": "81872e60-4daf-472a-967b-69960d36b66e", "error_url": "https://login.microsoftonline.com/error?code=90002"}

with provider["registry.terraform.io/hashicorp/azurerm"],
on provider.tf line 1, in provider "azurerm":
1: provider "azurerm" {
```

```
#Azure:~/FCSS/terraform/Troubleshooting$
```

After the initial Terraform configuration in Microsoft Azure, the terraform plan command is run.

Which two statements about running the terraform plan command are true? (Choose two.)

- A. The terraform plan command will deploy the rest of the resources except the service principle details.
- B. The terraform plan command makes terraform do a dry run.
- C. You cannot run the terraform apply command before the terraform plan command.
- D. You must run the terraform init command once, before the terraform plan command.

Answer: B,D

NEW QUESTION # 27

Your administrator instructed you to deploy an Azure vWAN solution to create a connection between the main company site and branch sites to the other company VNETs.

What is the best connection solution available between your company headquarters, branch sites, and the Azure vWAN hub?

- A. SSL VPN connections
- B. An L2TP connection
- C. ExpressRoute
- D. GRE tunnels

Answer: C

Explanation:

The best solution for connecting headquarters, branch sites, and Azure vWAN hubs is ExpressRoute, as it provides a private, reliable, and high-bandwidth connection directly into Azure, unlike VPN-based solutions such as L2TP, GRE, or SSL VPN.

NEW QUESTION # 28

Refer to the exhibit. Your team notices an unusually high volume of traffic sourced at one of the organizations FortiGate EC2 instances. They create a flow log to obtain and analyze detailed information about this traffic. However, when they checked the log, they found that it included traffic that was not associated with the FortiGate instance in question.

What can they do to obtain the correct logs?

VPC flow log wizard

VPC > Your VPCs > Create flow log

Create flow log Info

Flow logs can capture IP traffic flow information for the network interfaces associated with your resources. You can create multiple flow logs to send traffic to different destinations.

Selected resources Info

Name	Resource ID	State
DefaultVPC	vpc-09d6e4631cd49d2b3	Available

Flow log settings

Name - optional

Filter
 The type of traffic to capture (accepted traffic only, rejected traffic only, or all traffic).
 Accept
 Reject
 All

Maximum aggregation interval Info
 The maximum interval of time during which a flow of packets is captured and aggregated into a flow log record.
 10 minutes
 1 minute

Destination
 The destination to which to publish the flow log data.
 Send to CloudWatch Logs
 Send to an Amazon S3 bucket
 Send to Amazon Data Firehose in the same account
 Send to Amazon Data Firehose in a different account

- A. Change the maximum aggregation time to 1 minute.
- B. Create a new flow log at the interface level.

- C. Ensure that the flow log data is not mixed with the rest of the traffic.
- D. Send the logs to Amazon Data Firehose instead to get more granular information.

Answer: B

Explanation:

VPC flow logs can be created at the VPC, subnet, or network interface (ENI) level. If you create them at the VPC level (as shown in the exhibit), the logs will include traffic from all resources in that VPC. To capture logs only for the FortiGate EC2 instance, you must create a new flow log at the specific network interface (ENI) level of that instance.

NEW QUESTION # 29

.....

The Fortinet NSE 7 - Public Cloud Security 7.6 Architect (NSE7_CDS_AR-7.6) practice questions give you a feeling of a real exam which boost confidence. Practice under real Fortinet NSE 7 - Public Cloud Security 7.6 Architect (NSE7_CDS_AR-7.6) exam situations is an excellent way to learn more about the complexity of the Fortinet NSE7_CDS_AR-7.6 Exam Dumps. You can learn from your Fortinet NSE 7 - Public Cloud Security 7.6 Architect (NSE7_CDS_AR-7.6) practice test mistakes and overcome them before the actual NSE7_CDS_AR-7.6 exam.
