156-587 Latest Practice Materials, New 156-587 Braindumps Sheet

What's more, part of that PrepAwayTest 156-587 dumps now are free: https://drive.google.com/open?id=1CcTG4Jto2fFskJAxQ8vN-HqX4Oc3tmhj

PrepAwayTest provides you with a free demo of CheckPoint 156-587 Questions so you do not have any doubts about the quality of our exam prep material. Similarly, We also provide free updates up to 365 days after purchasing Check Point Certified Troubleshooting Expert - R81.20 dumps questions, so that you always get the latest CheckPoint dumps.

PrepAwayTest is unlike other similar platforms, our 156-587 real test can be downloaded for free trial before purchase, which allows you to understand our sample questions and software usage. It will also enable you to make a decision based on your own needs and will not regret. And we have organized a group of professionals to revise our 156-587 Preparation materials. The simple and easy-to-understand language of 156-587 guide torrent frees any learner from studying difficulties, whether for students or office workers. And the pass rate of our 156-587 exam questions is as high as 99% to 100%.

Valid 156-587 Latest Practice Materials for Passing 156-587 Exam Preparation

It is well acknowledged that people who have a chance to participate in the simulation for the real 156-587 exam, they must have a

fantastic advantage over other people to get good grade in the 156-587 exam. Now, it is so lucky for you to meet this opportunity once in a blue. We offer you the simulation test with the Software version of our 156-587 Preparation dumps in order to let you be familiar with the environment of test as soon as possible.

CheckPoint 156-587 Exam Syllabus Topics:

Topic	Details
Topic 1	• Advanced Management Server Troubleshooting: This section of the exam measures the skills of Check Point System Administrators and focuses on troubleshooting management servers. It emphasizes understanding server architecture and diagnosing problems related to server performance and connectivity.
Topic 2	• Advanced Firewall Kernel Debugging: This section of the exam measures the skills of Check Point Network Security Administrators and focuses on kernel-level debugging for firewalls. Candidates will learn how to analyze kernel logs and troubleshoot firewall-related issues at a deeper level.
Topic 3	• Advanced Troubleshooting with Logs and Events: This section of the exam measures the skills of Check Point Security Administrators and covers the analysis of logs and events for troubleshooting. Candidates will learn how to interpret log data to identify issues and security threats effectively.
Topic 4	• Introduction to Advanced Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and covers the foundational concepts of advanced troubleshooting techniques. It introduces candidates to various methodologies and approaches used to identify and resolve complex issues in network environments.
Topic 5	• Advanced Gateway Troubleshooting: This section of the exam measures the skills of Check Point Network Security Engineers and addresses troubleshooting techniques specific to gateways. It includes methods for diagnosing connectivity issues and optimizing gateway performance.
Topic 6	• Advanced Identity Awareness Troubleshooting: This section of the exam measures the skills of heck Point Security Consultants and focuses on troubleshooting identity awareness systems.

CheckPoint Check Point Certified Troubleshooting Expert - R81.20 Sample Questions (Q93-Q98):

NEW QUESTION # 93
What is the name of the VPN kernel process?

- A. VPND
- B. VPNK
- C. FWK
- D. CVPND

Answer: A

NEW QUESTION # 94
Check Point provides tools & commands to help you to identify issues about products and applications.
Which Check Point command can help you to display status and statistics information for various Check Point products and applications?

- A. cpstat
- B. CPstat
- C. fwstat
- D. CPview

Answer: A

Explanation:

The correct Check Point command to display status and statistics information for various Check Point products and applications is cpstat. This command provides a dynamic real-time view of the system, showing the information such as the number of connections, packets, drops, CPU usage, memory usage, disk space, license status, and blade status. The cpstat command can be customized by using various options and flags to specify the product, the interval, the fields, and the format of the output. For example, to display the status and statistics of the firewall module every 5 seconds, the command would be:
cpstat fw -f all -i 5
The other commands are incorrect because:
* A. CPview is a Check Point tool that displays information about the system performance, such as the CPU, memory, disk, network, and firewall. It does not show information about other products and applications, such as VPN, Identity Awareness, Anti-Virus, etc.
* C. fwstat is not a valid command. The correct command is fw ctl pstat, which displays information about the firewall kernel, such as the number of connections, packets, drops, memory, and synchronization. It does not show information about other products and applications, such as VPN, Identity Awareness, Anti-Virus, etc.
* D. CPstat is not a valid command. The correct command is cpstat, which is case-sensitive.

* cpstat - Check Point Software
* CPView Utility
* fw ctl pstat - Check Point Software
* (CCTE) - Check Point Software

NEW QUESTION # 95
You receive reports that Users cannot browse internet sites. You are using identity awareness with AD Query and Identity Collector in addition you have the Browser Based Authentication Enabled. What command can be used to debug the problem?

- A. on the gateway: ad debug on
- B. on the gateway: ad query debug on
- C. on the management: ad query debug extended
- D. on the gateway: pdp debug nac extended

Answer: D

Explanation:
Identity Awareness is a feature that enables the Security Gateway to identify users and groups behind IP addresses, and apply security policies based on their identity12. Identity Awareness uses different methods to acquire identities, such as AD Query, Identity Collector, and Browser-Based Authentication12. To debug Identity Awareness issues, you need to use the command pdp debug on the gateway, where pdp stands for Policy Decision Point, the component that handles the identity acquisition and enforcement13. The command pdp debug has different flags for different identity sources, such as adlog for AD Query, ic for Identity Collector, and nac for Browser-Based Authentication13. The flag extended enables more detailed debug output13. Therefore, the correct command to debug the problem of users not being able to browse internet sites with Identity Awareness using AD Query, Identity Collector, and Browser-Based Authentication is pdp debug nac extended on the gateway13. The other options are incorrect because they either use the wrong command (ad debug instead of pdp debug), the wrong flag (ad query instead of nac), or the wrong location (on the management instead of on the gateway). NEW QUESTION # 96
What is correct about the Resource Advisor (RAD) service on the Security Gateways?

- A. RAD functions completely in user space The Pattern Matter (PM) module of the CMI looks up for URLs in the cache and if not found, contact the RAD process in user space to do online categorization
- B. RAD is not a separate module, it is an integrated function of the 'fw' kernel module and does all operations in the kernel space
- C. RAD has a kernel module that looks up the kernel cache notifies client about hits and misses and forwards a-sync requests to RAD user space module which is responsible for online categorization
- D. RAD is completely loaded as a kernel module that looks up URL in cache and if not found connects online for categorization There is no user space involvement in this process

Answer: C

Explanation:
The Resource Advisor (RAD) service on the Security Gateways is responsible for online categorization of URLs and resources for Application Control and Threat Prevention blades. RAD has two components: a kernel module and a user space module. The kernel module looks up the kernel cache for URLs and resources, notifies the client about hits and misses, and forwards asynchronous requests to the user space module. The user space module handles the communication with the Check Point online web service and updates the kernel cache with the results. RAD can operate in three modes: hold, background, and custom, depending on the configuration of the blades and the policy. Reference:
Check Point Processes and Daemons - Section: Security Gateway Software Blades and Features - Subsection: URL Filtering Blade
Solved: Re: RAD's high utilization - Post by @PhoneBoy Check Point Certified Troubleshooting Expert (CCTE) - Exam Topics - Module 5: Advanced Access Control

NEW QUESTION # 97
If SmartLog is not active or failed to parse results from server, what commands can be run to re-enable the service?

- A. smartlogstart and smartlogstop
- B. smartlogrestart and smartlogstart
- C. smartlogstart and smartlogsetup
- D. smartloginit and smartlogstop

Answer: B

Explanation:
The correct answer is A. smartlogrestart and smartlogstart. These commands are used to restart the SmartLog service and start the SmartLog indexing process. They can be run on the Security Management Server or the Log Server to resolve issues with SmartLog not being active or failing to parse results from the server. The other commands are not valid or relevant for this purpose.
